As the economy increasingly moves towards a knowledge based economy, the ability to manage knowledge becomes a matter of competitive survival. Whilst current literature addresses the subject only partially, from a human resource, information systems or practitioner perspective, this is the first textbook to bring together and integrate all these dimensions. "Knowledge Management: an Integrated Approach" is centred around five parts of the knowledge cycle namely discovering knowledge, generating knowledge, evaluating knowledge, sharing knowledge and leveraging knowledge. The blend of theory and practice makes this the ideal resource for students studying knowledge management courses within business, management, information science and computer science degrees at both undergraduate and postgraduate levels.

Knowledge Management (KM) Processes in Organizations

Knowledge Management (KM) is an effort to increase useful knowledge in the organization. It is a natural outgrowth of late

twentieth century movements to make organizational management and operations more effective, of higher quality, and more responsive to constituents in a rapidly changing global environment. This document traces the evolution of KM in organizations, summarizing the most influential research and literature in the field. It also presents an overview of selected common and current practices in knowledge management, including the relationship between knowledge management and decision making, with the intention of making a case for KM as a series of processes and not necessarily a manipulation of things. The final section highlights the use of social networking and commonly adopted Web applications to increase the value of social capital and to connect practitioners with clients and colleagues. Table of Contents: Introduction / Background Bibliographic Analysis / Theorizing Knowledge in Organizations / Conceptualizing Knowledge Emergence / Knowledge "Acts" / Knowledge Management in Practice / Knowledge Management Issues / Knowledge Management and Decision Making / Social Network Analysis and KM / Implications for the Future / Conclusion
