Paul Krugman is one of the leading economic thinkers of our time. The examples he uses in this book include international experiences, so will appeal to a European audience and give students a more realistic view of how economics works in the real world.  
At Loggerheads? Univ of California Press

For the fourth consecutive year, the Association of Geographic Information Laboratories for Europe (AGILE) promoted the edition of a book with the collection of the scientific papers that were submitted as full-papers to the AGILE annual international conference. Those papers went through a third competitive review process. The 13 AGILE conference call for full-papers of original and unpublished fundamental scientific research resulted in 54 submissions, of which 21 were accepted for publication in this volume (acceptance rate of 39%). Published in the

Springer Lecture Notes in Geoinformation and Cartography, this book is associated to the 13 AGILE Conference on Geographic Information Science, held in 2010 in Guimarães, Portugal, under the title "Geospatial Thinking". The efficient use of geospatial information and related technologies assumes the knowledge of concepts that are fundamental components of Geospatial Thinking, which is built on reasoning processes, spatial conceptualizations, and representation methods. Geospatial Thinking is associated with a set of cognitive skills

consisting of several forms of knowledge and cognitive operators used to transform, combine or, in any other way, act on that same knowledge. The scientific papers published in this volume cover an important set of topics within Geoinformation Science, including: Representation and Visualisation of Geographic Phenomena; Spatiotemporal Data Analysis; Geo-Collaboration, Participation, and Decision Support; Semantics of Geoinformation and Knowledge Discovery; Spatiotemporal Modelling and Reasoning; and Web Services, Geospatial Systems and Real-time Applications.

In Homer Economicus a cast of lively contributors takes a field trip to Springfield, where the Simpsons reveal that economics is everywhere. By exploring the hometown of television's first family, this book provides readers with the economic tools and insights to guide them at work, at home, and at the ballot box. Since The Simpsons centers on the daily lives of the Simpson family and its colorful neighbors, three opening

chapters focus on individual behavior and decision-making, introducing readers to the economic way of thinking about the world. Part II guides readers through six chapters on money, markets, and government. A third and final section discusses timely topics in applied microeconomics, including immigration, gambling, and health care as seen in The Simpsons. Reinforcing the nuts and bolts laid out in any principles text in an entertaining and culturally relevant way, this book is an excellent teaching resource that will also be at home on the bookshelf of an avid reader of pop economics.

This joint venture between ICOMOS, the advisory body to UNESCO on cultural sites, and the International Astronomical Union is the second volume in an ongoing exploration of themes and issues relating to astronomical heritage in particular and to science and technology heritage in general. It examines a number of key

questions relating to astronomical heritage sites and their potential recognition as World Heritage, attempting to identify what might constitute "outstanding universal value" in relation to astronomy. "Heritage Sites of Astronomy and Archaeoastronomy--Volume 2" represents the culmination of several years' work to address some of the most challenging issues raised in the first ICOMOS-IAU Thematic Study, published in 2010. These include the recognition and preservation of the value of dark skies at both cultural and natural sites and landscapes; balancing archaeoastronomical considerations in the context of broader archaeological and cultural values; the potential for serial nominations; and management issues such as preserving the integrity of astronomical sightlines through the landscape. Its case studies are developed in greater depth than those in volume 1, and generally structured as segments of draft nomination dossiers. They include seven-stone antas (prehistoric dolmens) in Portugal and Spain, the thirteen towers of Chankillo in Peru, the astronomical timing of irrigation in Oman, Pic du Midi de Bigorre

Observatory in France, Baikonur Cosmodrome in Kazakhstan, and Aoraki-Mackenzie International Dark Sky Reserve in New Zealand. A case study on Stonehenge, already a World Heritage Site, focuses on preserving the integrity of the solstitial sightlines. As for the first ICOMOS-IAU Thematic Study, a international team of authors including historians, astronomers and heritage professionals is led by Professor Clive Ruggles for the IAU and Professor Michel Cotte for ICOMOS.

Este libro plantea y discute los distintos métodos de regulación y supervisión del sector eléctrico a partir de la teoría microeconómica sobre las industrias relacionadas con la provisión de servicios públicos. Además, revisa y evalúa las opciones que se utilizan en otros países con respecto a la organización del sector, los métodos de regulación de precios y la supervisión de la calidad del servicio, tanto para las actividades de generación como para la transmisión y distribución eléctrica. Estas opciones se analizan tomando en cuenta las características

peculiares de cada sistema y la consistencia entre los mecanismos implementados y los objetivos de política energética de cada caso. Regulación y supervisión del sector eléctrico está dirigido a economistas, ingenieros y abogados que trabajen en instituciones públicas y privadas vinculadas al sector y constituye un material indispensable para cursos de especialización y programas de posgrado.

*Labor Markets and Business Cycles* integrates search and matching theory with the neoclassical growth model to better understand labor market outcomes. Robert Shimer shows analytically and quantitatively that rigid wages are important for explaining the volatile behavior of the unemployment rate in business cycles. The book focuses on the labor wedge that arises when the marginal rate of substitution between consumption and leisure does not equal the marginal product of labor. According to competitive models of the labor market, the labor wedge should be constant and equal to the labor income tax rate. But in U.S. data, the wedge is strongly countercyclical,

making it seem as if recessions are periods when workers are dissuaded from working and firms are dissuaded from hiring because of an increase in the labor income tax rate. When job searches are time consuming and wages are flexible, search frictions--the cost of a job search--act like labor adjustment costs, further exacerbating inconsistencies between the competitive model and data. The book shows that wage rigidities can reconcile the search model with the data, providing a quantitatively more accurate depiction of labor markets, consumption, and investment dynamics. Developing detailed search and matching models, *Labor Markets and Business Cycles* will be the main reference for those interested in the intersection of labor market dynamics and business cycle research.

The Valley of the Queens Project is a collaboration of the Supreme Council of Antiquities and the Getty Conservation Institute from 2006-2011. The project involved comprehensive research, planning and assessment culminating in the development of detailed plans for conservation and management of the site.

Volume 2 of the report is the condition summary of the 111 tombs from the 18th, 19th, and 20th Dynasties in the Valley of the Queens. This includes a summary of tomb architectural development, the geological and hydrological context, wall painting technique and condition assessment of the paintings and structural stability of the tombs.

Cork oak has historically been an important species in the western Mediterranean—ecologically as a canopy

or “framework” tree in natural woodlands, and culturally as an economically valuable resource that underpins local economies. Both the natural woodlands and the derived cultural systems are experiencing rapid change, and whether or not they are resilient enough to adapt to that change is an open question. *Cork Oak Woodlands on the Edge* provides a synthesis of the most up-to-date, scientific, and practical information on the management of cork oak woodlands and the cultural systems that depend on cork oak. In addition, *Cork Oak Woodlands on the Edge* offers ten site profiles written by local experts that present an in-depth vision of cork oak woodlands across a range of biophysical, historical, and cultural contexts, with sixteen pages of full-color photos that illustrate the tree, agro-silvopastoral systems, products, resident biodiversity, and more. *Cork Oak Woodlands on the Edge* is an important book for anyone interested in the future of cork oak woodlands, or in the management of cultural landscapes and their associated land-use systems. In a changing world full of risks and surprises, it represents an excellent example of a multidisciplinary

and holistic approach to studying, managing, and restoring an ecosystem, and will serve as a guide for other studies of this kind.

After decades of civil war and instability, the African country of Angola is experiencing a spectacular economic boom thanks to its most valuable natural resource: oil. Focusing on the everyday realities of people living in the extraction zones, Reed explores the exclusion, degradation, and violence that are the fruits of petrocapitalism in Angola.  
*The Changing Business of Journalism and Its Implications for Democracy* Berghahn Books

In this weaving of radical political economy, *Omnia Sunt Communia* sets out the steps to postcapitalism. By conceptualising the commons not just as common goods but as a set of social systems, Massimo De Angelis shows their pervasive presence in everyday life, mapping out a strategy for total social transformation. From the micro to the macro, De Angelis unveils the commons as fields of power relations – shared space, objects, subjects – that explode the limits

of daily life under capitalism. He exposes attempts to co-opt the commons, through the use of code words such as 'participation' and 'governance', and reveals the potential for radical transformation rooted in the reproduction of our communities, of life, of work and of society as a whole.

*Economía de la energía* Macmillan  
The advancement of social theory requires an analytical approach that systematically seeks to explicate the social mechanisms that generate and explain observed associations between events. These essays, written by prominent social scientists, advance criticisms of current trends in social theory and suggest alternative approaches. The mechanism approach calls attention to an intermediary level of analysis in between pure description and story-telling, on the one hand, and grand theorizing and universal social laws, on the other. For social theory to be of use for the working social scientist, it must attain a high level of precision and provide a toolbox from which middle range theories can be constructed.

Limits to expansion of protected area systems underline the importance of seeking new ways to conserve biodiversity. The twelve case studies ranging from the High Andes to Viet Nam support the view that certain traditional agricultural and pastoral systems can succeed in attaining a sustainable level of production while at the same time maintaining both a high level of biodiversity and most functional aspects of the ecosystems.

This book showcases the power of economic principles to explain and predict issues and current events in the food, agricultural, agribusiness, international trade, natural resources and other sectors. The result is an agricultural economics textbook that provides students and instructors with a clear, up-to-date, and straightforward approach to learning how a market-based economy functions, and how to use simple economic principles for improved decision making. While the primary focus of the book is on microeconomic aspects, agricultural economics has expanded over recent

decades to include issues of macroeconomics, international trade, agribusiness, environmental economics, natural resources, and international development. Hence, these topics are also provided with significant coverage.

The traditional patterns of land use that have created many of the world's cultural landscapes contribute to biodiversity, support ecological processes, provide important environmental services, and have proven sustainable over the centuries. Protected landscapes can serve as living models of sustainable use of land and resources, and offer important lessons for sustainable development. Examples of these landscapes and the diverse strategies needed to maintain this essential relationship between people and the land are provided.

The report offers a simple framework for policy analysis by identifying three forest types: frontiers and disputed lands; lands beyond the agricultural frontier; and, mosaic lands where forests and agriculture

coexist. It collates geographic and

economic information for each type that will help formulate poverty-reducing forest policy.
