Lecture 16: Dynamic

Neural Networks for

Question Answering

Dynamic Memory Network

On Natural Most tasks in

natural language

processing can be cast

into question answering

(QA) problems over

language input. We

introduce the dynamic
memory network (DMN), a
neural network

architecture which

processes input

sequences and questions,

forms episodic memories,

and generates relevant

answers. Questions

trigger an iterative

attention process which

allows the model to

condition its attention on

Abstract

Question Answering (QA) is an important milestone for the research of ...

Dynamic Memory Network on Natural Language Question Answering

Dynamic memory networks

Another advancement in the direction of memory networks was made by Kumar, Irsoy, Ondruska, Iyyer, Bradbury, Gulrajani and Socher from Metamind. By the way, Richard Socher is the author of an excellent course on deep learning and NLP at Stanford, which helped us a lot to get into the topic.

Implementing Dynamic memory networks · Yereva

NN Prior to DMNs, work had been

done in the related lines of attention and memory mechanisms. Wetson et al [7] first presented memory networks as a way to use a long-term memory component as a dynamic knowledge base for question answering. This memory network, unlike DMNs, requires the labeled supporting facts during training.

Dynamic Memory Networks for Question Answering

Lecture 16 addresses the question "Can all NLP tasks be seen as question answering problems?".

Key phrases: Coreference Resolution, Dynamic Memory Networks for Question Answering over Text and ...

Lecture 16: Dynamic Neural Networks for Question Answering

Neural network architectures with memory and attention mechanisms exhibit certain reasoning capabilities required for question answering. One such architecture, the dynamic memory network (DMN), obtained high accuracy on a variety of language tasks. However, it was not shown whether the architecture achieves strong results for question answering when supporting facts are not marked during ...
