Various factors affect the performance of electrical contacts, including tribological, mechanical, electrical, and materials aspects. Although these behaviors have been studied for many years, they are not widely used or understood in practice. Combining approaches used across the globe, *Electrical Contacts: Fundamentals, Applications, and Technology* integrates advances in research and development in the tribological, material, and analytical aspects of electrical contacts with new data on electrical current transfer at the micro- and nanoscales. Taking an application-oriented approach, the authors illustrate how material characteristics, tribological behavior, and loading impact the degradation of contacts, formation of intermetallics, and overall reliability and performance. Coverage is divided broadly into three sections, with the first focused on mechanics, tribology, materials, current and heat transfer, and basic reliability issues of electrical contacts. The next section explores applications, such as power connections, electronic connections, and sliding contacts, while the final section presents the diagnostic and monitoring techniques used to investigate and measure phenomena occurring at electrical contact interfaces. Numerous references to current literature reflect the fact that this book is the most comprehensive survey in the field. Explore an impressive collection of data, theory, and practical applications in *Electrical Contacts: Fundamentals, Applications, and Technology*, a critical tool for anyone investigating or designing electrical equipment with improved performance and reliability in mind.

Music has long played a role in American presidential campaigns as a mode of both expressing candidates' messages and criticizing the opposition. The relevance of music in the 2016 campaign for the White House took various forms in a range of American media: a significant amount of popular music was used by campaigns, many artist endorsements were sought by candidates, ever changing songs were employed at rallies, instances of musicians threatening legal action against candidates burgeoned, and artists and others increasingly used music as a form of political protest before and after Election Day. The 2016 campaign was a game changer, similar to the development of music in the 1840 campaign, when "Tippecanoe and Tyler Too" helped sing William Harrison into the White House. The ten chapters in this collection place music use in 2016 in historical perspective before examining musical messaging, strategy, and parody. The book ultimately explores causality: how do music and musicians affect presidential elections, and how do politicians and campaigns affect music and musicians? The authors explain this interaction from various perspectives, with methodological approaches from several fields, including political science, legal studies, musicology, cultural studies, rhetorical studies, and communications and journalism. These chapters will help the reader understand music in the 2016 election to realize how music will be relevant in 2020 and beyond.

Environmental Impacts and Management CreateSpace

Decentralization and Targeted Transfers Duke University Press

This volume analyses a broad range of anti-corruption measures recently implemented in Eastern Europe and Central Asia and identifies where interim progress has been achieved, and where further or reinforced action is needed.

Progress and Challenges OECD Publishing

This book tells the fascinating stories of the valiant women who broke down barriers to join the space program. Beginning with the orbital flight of USSR cosmonaut Valentina Tereshkova in 1963, they became players in the greatest adventure of our time. The author contextualizes their accomplishments in light of the political and cultural climate, from the Cold War in the background to the changing status of women in society at large during the Seventies. The book includes the biographies of, and in some cases interviews with, the sixty women who flew in space in the first half century of space history. It reports their achievements and some little known details. The result is a gallery of pioneering women who reached for the stars: women who, with exceptional skill, hard work, and dedication, reached impressive careers as accomplished pilots, researchers, and engineers; many are now in high level managerial positions both at NASA or in public and private organizations, and all left a legacy of strength.

Twelve Years a Slave Dramatists Play Service Inc

Ohio's Lake Erie wineries and vineyards are rooted in tradition. European immigrants settled on the Lake Erie islands and nearby shoreline in the mid-1800s, and the grape industry flourished in Ohio into the early 20th century. Industrialization from Cleveland to Toledo swallowed up prime growing property along the lakeshore, but many farms continued to grow grapes. During Prohibition, wine making went underground. When it ended, restaurant owners bottled their own fortified wines and some of the wineries started mass producing wine with new equipment. The wines of Ohio, like those all over the eastern United States, were mostly sweet and made from native labrusca grapes. In the 1960s, Ohio's serious winemakers learned how to cultivate European-style vinifera grapes along Lake Erie's shore and on the islands. Chardonnay and cabernet sauvignon grapes now grow alongside Concord and Catawba. Today, more than 40 wineries stretch across northern Ohio.

Commercial Directory of Latin America (Classic Reprint) Arcadia Publishing

From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of

owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Fundamentals, Applications and Technology Springer Nature

Cutting edge thinking and best practice from the best brains at four of the world's top business schools. Everyone in business is involved in strategy. Whether it be formulating it or implementing it. Every business from Fortune 500 companies to internet start-ups is reliant on strategy for survival and success. Mastering Strategy brings you the latest thinking from the world's top international business schools. This rich mix of thought leadership covers all the top strategy issues, from mergers & acquisitions, risk, technology, and alliances, to knowledge, governance, globalization, and leadership. With contributors from among the world's top strategists, including C.K. Prahalad, Henry Mintzberg, John Kay, Noel Tichy, and W. Chan Kim, this book combines definitive new thinking with examples of leading corporate strategies. Strategy is everybody's business. Become a master of yours. SAID The Said Business School is the business school of the University of Oxford, and the newest department in one of the world's oldest universities. The school was established in 1998 through an initial £20m benefaction from Mr Wafic Said and matching funding from the University. It specializes in high level research into international business topics, including strategy, finance and corporate governance. The school also offers MBA, undergraduate and research degrees to an international student body. INSEAD In just 40 years, INSEAD has grown from a modest European educational start-up to one of the world's leading business schools, with more than 650 MBAs, 5,500 executives and 40 PhDs from over 75 countries passing through its programs every year.

Participants are taught by an internationally recognized faculty of 124 professors from 26 countries. The institute's extensive alumni network is present in 122 countries and represents more than 20,200 MBA and executive alumni. CHICAGO The University of Chicago Graduate School of Business is at the forefront of bringing a discipline-based approach to the study of business. Chicago GSB is known for its world renowned faculty, which includes more Nobel Prize winners than any other business school. Chicago GSB is also known for its strength in a number of areas including strategy, finance, entrepreneurship, international business, general management, economics, accounting, marketing and its innovative MBA program, which has campuses in Barcelona, Singapore and Chicago. MICHIGAN In Business Week magazine's bi-annual survey of corporate executives, the University of Michigan Business School (UMBS) was rated the most innovative business schools in the United States. UMBS's MBA and undergraduate programs blend the school's unusual across-the-board academic prowess with intensive development of applied skills and capabilities for results-producing leadership. In addition to degree programs, the Executive Education Center at UMBS offers a wide range of public and customized programs for working executives. More than 5,000 people participate in these programs each year, both on the school's campus in Ann Arbor, Michigan, and in overseas locations.

Music in the 2016 Presidential Election and Beyond CRC Press

Excerpt from Commercial Directory of Latin America In compliance with the requests of many merchants and manu facturers who desire to send Catalogues and Circulars to importers and dealers in Mexico, Central and South America, the Bureau of the American Republics has undertaken to publish a series of Commercial Directories of the several countries and colonies. The difficulty of securing the names and addresses of merchants has been greater than was anticipated, particularly those in cities and towns where there are no consular officers of the United States, and the lists herein given will be found incomplete. They are, however, as complete and accurate as the Bureau can make them with the present facilities at its command, and will doubtless be found useful to those who desire to introduce their wares to the knowledge of buyers on the southern continent. Any additions and corrections for subsequent publications will be appreciated. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

The iPhone may be the world's coolest computer, but it's still a computer, with all of the complexities. iPhone: The Missing Manual is a illustrated guide to the tips, shortcuts, and workarounds that will turn you, too, into an iPhone master. This updated guide shows you everything you need to know about the new features and user interface of iOS 9 for the iPhone. This easy-to-use book will help you accomplish everything from web browsing to watching videos so you can get the most out of your iPhone.

Sixty Different Paths to Space Pearson Education

In Emancipation's Daughters, Riché Richardson examines iconic black women leaders who have contested racial stereotypes and constructed new national narratives of black womanhood in the United States. Drawing on literary texts and cultural representations, Richardson shows how five emblematic black women—Mary McLeod Bethune, Rosa Parks, Condoleezza Rice, Michelle Obama, and Beyoncé—have challenged white-centered definitions of American identity. By using the rhetoric

of motherhood and focusing on families and children, these leaders have defied racist images of black women, such as the mammy or the welfare queen, and rewritten scripts of femininity designed to exclude black women from civic participation. Richardson shows that these women's status as national icons was central to reconstructing black womanhood in ways that moved beyond dominant stereotypes. However, these formulations are often premised on heteronormativity and exclude black queer and trans women. Throughout *Emancipation's Daughters*, Richardson reveals new possibilities for inclusive models of blackness, national femininity, and democracy.

Hearing Before the Subcommittee on Commerce, Consumer Protection, and Competitiveness of the Committee on Energy and Commerce, House of Representatives, One Hundredth Congress, Second Session on H.R. 3991 ... March 16, 1988 Springer Science & Business Media

This textbook presents a comprehensive overview of the environmental impacts of various types of outdoor recreation, and how these can be best managed. As a field of study, recreational ecology is both multidisciplinary and interdisciplinary, and the authors seek to develop a deeper understanding of both the role and function of the factors that influence visitor numbers and their impact. An accessible and comprehensive textbook, it features numerous types of outdoor recreational activities including hill walking, rock climbing, mountain marathons, skiing, scuba diving and more. Drawn from several global case studies, the authors estimate the current and future numbers involved in outdoor recreation, and how best these numbers can be managed. Effective visitor impact management actions arise from collaboration between recreation ecologists, social scientists, experienced recreation managers, recreation stakeholders and the recreationalists themselves: as such, this book will be multi-disciplinary in scope. This practical and engaging textbook will be invaluable to students and scholars of outdoor recreation and adventure tourism as well as practitioners and managers working in the field.

Albania provides a small amount of social assistance to nearly 20% of its population through a

system which allows a degree of community discretion in determining distribution. This study investigates the poverty targeting of this program. It indicates that relative to other safety net programs in low income countries, social assistance in Albania is fairly well targeted to the poor.

Air Navigation Radio Aids

The field of sports medicine covers a tremendous territory. Athletes present to their physician with everything from sprained ankles to bowel problems while running. Many of the classic textbooks in sports medicine cover many of these issues in a cursory way. Two major organ systems that account for many injuries in athletes are the nervous system and the vascular system. Because of their widespread, diffuse nature, athletes can present with myriad signs and symptoms related to these systems. Drs. Akuthota and Herring have done an outstanding job in their textbook *Nerve and Vascular Injuries in Sports Medicine* to produce a commonsense, yet thorough, approach to potential nerve and vascular injuries in athletes. The text provides any physician or clinician who evaluates and treats athletes with a clear path to an appropriate history, physical examination, imaging studies, and electrophysiologic and vascular examinations of any athlete with potential nerve or vascular injuries. The first third of the book describes the appropriate evaluation of athletes with nerve and vascular symptoms and signs. Emphasis is placed on kinetic chain contributions to nerve and vascular injuries to address not only the cause of the injury but possible associated, contributing biomechanical deficiencies. The last two-thirds of the book cover regional specific nerve and vascular injuries with special attention to stingers, thoracic outlet syndrome, lumbar radiculopathy, and compartment syndromes.
