This new addition to the highly successful

'Secret Projects' series adds a new  
dimension to the weird, wonderful and  
wacky ideas that were developed to  
conquer space

The U.S.-China Military Scorecard Springer  
Science & Business Media

How did China undergo its meteoric rise  
from a technological backwater into a  
military superpower in outer space? This  
amazing transition began in top secret US  
Air Force programs over 75 years  
ago! While living in America, a brilliant  
Chinese scientist is chosen to work on the  
US military's most classified technologies

for over a decade. Suddenly, he is  
outlandishly targeted by the FBI, traded in  
a prisoner exchange by President  
Eisenhower and must return to China. This  
episode ultimately led to China's  
development of a military-run secret space  
program (SSP) using exotic  
electromagnetic propulsion systems now  
challenging US military dominance on  
Earth and in outer space. By 2030, China's  
economy will outgrow the US, and China  
plans to use its vast economic resources  
to project its presence deep into space in  
ways that will lead to increasing military

confrontations with the newly created US Space Force. In this book, you will learn about: - The origins of China's SSP through the pioneering work of Dr. Tsien Hsue-shen who brought his advanced knowledge of SSPs in Nazi Germany and the US to China;- How ancient aviation technologies buried in China's mysterious pyramids are being secretly studied and reverse engineered;- Ancient artifacts from extraterrestrial contacts in remote regions of Tibet, the Gobi Desert, and the truth behind legends of Shamballa and Agartha;- China's participation in a United Nations run SSP designed to foster greater international cooperation in responding to the existence of extraterrestrial life;- The space weapons and electromagnetically propelled spacecraft secretly being developed and deployed by China;- The threat posed by Communist China's plan to use Artificial Intelligence to become the dominant superpower on Earth and in Space.The Rise of the Red Dragon represents both a global crisis and opportunity presented by China. Are the US and China destined to violently clash in an inevitable cataclysmic space war or are they to become strategic partners in

guiding humanity's peaceful transition into a space faring galactic civilization?  
Chinese Views of Future Warfare Good Press

The rise of China is no doubt one of the most important events in world economic history since the Industrial Revolution. Mainstream economics, especially the institutional theory of economic development based on a dichotomy of extractive vs. inclusive political institutions, is highly inadequate in explaining China's rise. This book argues that only a radical reinterpretation of the history of the Industrial Revolution and the rise of the West (as incorrectly portrayed by the institutional theory) can fully explain China's growth miracle and why the determined rise of China is unstoppable despite its current "backward" financial system and political institutions. Conversely, China's spectacular and rapid transformation from an impoverished agrarian society to a formidable industrial superpower sheds considerable light on the fundamental shortcomings of the institutional theory and mainstream "blackboard" economic models, and provides more-accurate

reevaluations of historical episodes such as Africa's enduring poverty trap despite radical political and economic reforms, Latin America's lost decades and frequent debt crises, 19th century Europe's great escape from the Malthusian trap, and the Industrial Revolution itself. Contents: IntroductionKey Steps Taken by China to Set Off an Industrial RevolutionShedding Light on the Nature and Cause of the Industrial RevolutionWhy is China's Rise Unstoppable?Wha's Wrong with the Washington Consensus and the Institutional Theories?Case Study of Yong Lian: A Poor Village's Path to Becoming a Modern Steel TownConclusion: A New Stage Theory of Economic Development Readership: Academics, undergraduate and graduates students, journalists and professionals interested in economic development, the history of the Industrial Revolution, and especially China's economic transformation and industrial growth, as well as the political economy of governance.

**White Paper on China's Space Activities in 2016** Springer Science & Business Media  
Since the early 1980s, a prominent and

consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

#### **The Paradox of Power** China Maritime Studies

China's anti-ship ballistic missile (ASBM), the DF-21D, has reached the equivalent of Initial Operational Capability. Although it probably has been deployed in small numbers, additional challenges and tests remain. This study examines the ASBM's

capability and history, showing how the DF-21D meets multiple priorities in Chinese defense modernization and in the national security bureaucracy, as well its implications for the United States. The ASBM's physical threat to U.S. Navy ships will be determined by the development of associated systems and organizations, which currently limit data fusion and coordination in the complex task of identifying a U.S. aircraft carrier in the open ocean. Still, the ASBM poses a direct threat to the foundations of U.S. power project in Asia and will undermine the U.S. position, unless efforts to counter its political-military effects are taken.

#### **China's Strategic Modernization Implications for the United States**

Rand Corporation

This report reflects an attempt to understand current thinking in the Chinese People's Liberation Army (PLA) regarding system of systems and systems warfare, as well as current methods of warfighting. This report should be of interest to military analysts and scholars of the PLA, policymakers, and anyone else who seeks insight into how the PLA conceptualizes and seeks to wage modern warfare.

#### **Shooting Down a "Star": Program 437, the US Nuclear ASAT System and Present-Day Copycat Killers** World Scientific

This hearing on "China's Advanced Weapons" will examine a specific set of technologies that China's military is considering or pursuing. In framing the hearing topic as "advanced weapons," the hearing will focus on military technologies at or near the global technological frontier—weapons just now coming into development or not yet developed by any nation. As China has narrowed the technological gap with the United States over decades of investments in military modernization, it has become increasingly important to consider Beijing's efforts to develop new and potentially revolutionary weapons systems. China has reportedly conducted seven tests of its hypersonic glide vehicle since 2014. It has deployed not one but two antiship ballistic missiles, one of which has a stated range that reaches past the U.S. island of Guam. We hear of longstanding efforts to develop directed energy weapons, and see evidence of China testing a wide range of counterspace systems that could put

vulnerable U.S. space assets at risk. China is making major advances in areas such as unmanned systems and artificial intelligence, aided by rapid commercial progress in these sectors. As the new Congress focuses on national security challenges, it is critical to consider China's efforts to develop and field advanced weapons and the implications for the United States. Panel I will examine China's programs for the development of hypersonic and maneuverable re-entry vehicles. Panel II will examine directed energy and electromagnetic weapons development by China. Finally, Panel III will examine developments in China's counterspace, unmanned, and artificial intelligence-enabled systems.

*Peril* Houghton Mifflin Harcourt

The world's most populous nation views space as an asset, not only from a technological and commercial perspective but also from a political one. The repercussions of this ideology already extend far beyond Washington. China vs. the United States explores future Chinese aspirations in space and the implications of a looming space race. Dr. Seedhouse provides background information on the

fifteen-year history of the China National Space Administration and its long list of accomplishments. Sino-U.S. technological and commercial interests in space are discussed, including their interest in encouraging a potential space race. The national security objectives of the U.S. and China are also examined.

The Hundred-Year Marathon Midland Publishing

Conventional wisdom portrays the People's Republic of China (PRC) People's Liberation Army (PLA) as a backward continental force that will not pose a military challenge to its neighbors or to the United States well into the 21st century. PLA writings that demonstrate interest in exploiting the revolution in military affairs (RMA) are dismissed by a large segment of the PLA- watching community as wistful fantasies. The author offers an alternative perspective by outlining emerging PLA operational concepts and a range of research and development projects that appear to have been heavily influenced by U.S. and Russian writings on the RMA. Fulfillment of the PLA's vision for the 21st century could have significant repercussions for U.S.

interests in the Asia-Pacific region.

Does the United States Need Space-Based Weapons?. Council on Foreign Relations

For more than a century, no US adversary or coalition of adversaries - not Nazi Germany, Imperial Japan, or the Soviet Union - has ever reached sixty percent of US GDP. China is the sole exception, and it is fast emerging into a global superpower that could rival, if not eclipse, the United States. What does China want, does it have a grand strategy to achieve it, and what should the United States do about it? In *The Long Game*, Rush Doshi draws from a rich base of Chinese primary sources, including decades worth of party documents, leaked materials, memoirs by party leaders, and a careful analysis of China's conduct to provide a history of China's grand strategy since the end of the Cold War. Taking readers behind the Party's closed doors, he uncovers Beijing's long, methodical game to displace America from its hegemonic position in both the East Asia regional and global orders through three sequential "strategies of displacement." Beginning in the 1980s, China focused for two decades on "hiding capabilities and biding time."

After the 2008 Global Financial Crisis, it became more assertive regionally, following a policy of "actively accomplishing something." Finally, in the aftermath populist elections of 2016, China shifted to an even more aggressive strategy for undermining US hegemony, adopting the phrase "great changes unseen in century." After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response. Ironically, his proposed approach takes a page from Beijing's own strategic playbook to undermine China's ambitions and strengthen American order without competing dollar-for-dollar, ship-for-ship, or loan-for-loan.

### **Deterrence Theory and Chinese Behavior**

Henry Holt and Company  
A RAND study analyzed Chinese and U.S. military capabilities in two scenarios (Taiwan and the Spratly Islands) from 1996 to 2017, finding that trends in most, but not all, areas run strongly against the United States. While U.S. aggregate power remains greater than China's, distance and geography affect outcomes. China is capable of challenging U.S. military

dominance on its immediate periphery—and its reach is likely to grow in the years ahead.

### **Deceiving the Sky**

HarperCollins  
Two authorities on trends in warfare join forces to create a taut, convincing novel set in the near future in which a besieged America battles for its very existence  
*China's Space Program - From Conception to Manned Spaceflight* Vintage  
MacDonald recommends options and policies that will promote options and policies that will promote American security interests in space. He argues that the U.S. needs to take priority defensive military space measures to offset potential Chinese anti-satellite and related capabilities.

### China Military Power

CreateSpace  
The United States' approach to China since the Communist regime in Beijing began the period of reform and opening in the 1980s was based on a promise that trade and engagement with China would result in a peaceful, democratic state. Forty years later the hope of producing a benign People's Republic of China utterly failed. The Communist Party of China deceived the West into believing that the its system

and the Party-ruled People's Liberation Army were peaceful and posed no threat. In fact, these misguided policies produced the emergence of a 21st Century Evil Empire even more dangerous than a Cold War version in the Soviet Union. Successive American presidential administrations were fooled by ill-advised pro-China policymakers, intelligence analysts and business leaders who facilitated the rise not of a peaceful China but a threatening and expansionist nuclear-armed communist dictatorship not focused on a single overriding strategic objective: Weakening and destroying the United States of America. Defeating the United States is the first step for China's current rulers in achieving global supremacy under a new world order based on an ideology of Communism with Chinese characteristics. The process included technology theft of American companies that took place on a massive scale through cyber theft and unfair trade practices. The losses directly supported in the largest and most significant buildup of the Chinese military that now directly threatens American and allied interests around the world. The military threat is

only half the danger as China aggressively pursues regional and international control using a variety of non-military forces, including economic, cyber and space warfare and large-scale influence operations. *Deceiving the Sky: Inside Communist China's Drive for Global Supremacy* details the failure to understand the nature and activities of the dangers posed by China and what the United States can do in taking needed steps to counter the threats.

Unrestricted Warfare Government Printing Office

The transition from President Donald J. Trump to President Joseph R. Biden Jr. stands as one of the most dangerous periods in American history. But as #1 internationally bestselling author Bob Woodward and acclaimed reporter Robert Costa reveal for the first time, it was far more than just a domestic political crisis. Woodward and Costa interviewed more than 200 people at the center of the turmoil, resulting in more than 6,000

pages of transcripts—and a spellbinding and definitive portrait of a nation on the brink. This classic study of Washington takes readers deep inside the Trump White House, the Biden White House, the 2020 campaign, and the Pentagon and Congress, with eyewitness accounts of what really happened. Intimate scenes are supplemented with never-before-seen material from secret orders, transcripts of confidential calls, diaries, emails, meeting notes and other personal and government records, making *Peril* an unparalleled history. It is also the first inside look at Biden's presidency as he began his presidency facing the challenges of a lifetime: the continuing deadly pandemic and millions of Americans facing soul-crushing economic pain, all the while navigating a bitter and disabling partisan divide, a world rife with threats, and the hovering, dark shadow of the former president.

**Military Activities in the EEZ** Hoover Press

While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that

country has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas and policy proposals from leading China specialists, *China's Influence and American Interests* argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the

United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and methods than they do now.

*The Chinese Navy Encounter Books*

This overview aims to inform the public discussion of space-based weapons by examining their characteristics, potential attributes, limitations, legality, and utility. The authors do not argue for or against space weapons, nor do they estimate the potential costs and performance of specific programs, but instead sort through the realities and myths surrounding space weapons in order to ensure that debates and discussions are based on fact.

China, Space Weapons, and U.S. Security  
Simon and Schuster

The People's Republic of China seeks to attain military strength commensurate with its growing regional and international influence and to close the military-technological gap which has long separated it from the other major powers. To achieve its military modernization goals, China will continue its efforts to import the critical weapons and technologies it requires. Yet, for reasons rooted in both historical and contemporary contexts, China faces many difficulties and setbacks in this quest. China's Arms Acquisitions from Abroad documents and analyses the 150-year effort by China to strengthen its military forces through arms imports. Based on an historical

understanding of this process, the report focuses mainly on contemporary transfers of weapons and technologies to China, particularly those from the Soviet Union and Russia, but also including imports from Israel, France, the United Kingdom, the United States and other suppliers. Relying on primary sources as well as on the most comprehensive collection of open-source data and information available on the subject, the report provides extensive documentation and a balanced assessment of past, current and likely future developments regarding Chinese arms imports. This unique study will prove useful to experts and officials concerned with security and regional affairs in East Asia.
