How to Instantly Connect with Anyone: 96 All-New Little Tricks for Big Success in Relationships Penguin

Now a major motion picture starring Cole Sprouse and Haley Lu Richardson!
Goodreads Choice Winner, Best Young Adult Fiction of 2019 In this #1 New York Times bestselling novel that's perfect for fans of John Green's *The Fault in Our Stars*, two teens fall in love with just one minor

complication—they can't get within a few feet of each other without risking their lives. Can you love someone you can never touch? Stella Grant likes to be in control—even though her totally out of control lungs have sent her in and out of the hospital most of her life. At this point, what Stella needs to control most is keeping herself away from anyone or anything that might pass along an infection and jeopardize the possibility of a lung transplant. Six feet apart. No exceptions. The only thing Will Newman wants to be in control of is getting out of

this hospital. He couldn't care less about his treatments, or a fancy new clinical drug trial. Soon, he'll turn eighteen and then he'll be able to unplug all these machines and actually go see the world, not just its hospitals. Will's exactly what Stella needs to stay away from. If he so much as breathes on Stella she could lose her spot on the transplant list. Either one of them could die. The only way to stay alive is to stay apart. But suddenly six feet doesn't feel like safety. It feels like punishment. What if they could steal back just a little bit of the space their broken

lungs have stolen from them? Would five feet apart really be so dangerous if it stops their hearts from breaking too?

The One and Only Ivan Simon and Schuster

The inspirational bestseller that ignited a movement and asked us to find our WHY. Discover the book that is captivating millions on TikTok and that served as the basis for one of the most popular TED Talks of all time—with more than 56 million views and counting. Over a decade

ago, Simon Sinek started a movement that inspired millions to demand purpose at work, to ask what was the WHY of their organization. Since then, millions have been touched by the power of his ideas, and these ideas remain as relevant and timely as ever. *START WITH WHY* asks (and answers) the questions: why are some people and organizations more innovative, more influential, and more profitable than others? Why do some command greater loyalty from customers and employees alike? Even among the successful, why are so few able to repeat their success over and over? People like Martin Luther King Jr., Steve Jobs, and the Wright Brothers had little in common, but they all started with WHY. They realized that people won't truly buy into a product, service, movement, or idea until they understand the WHY behind it. *START WITH WHY* shows that the leaders who have had the greatest influence in the world all think, act and communicate the same way—and it's the opposite of what everyone else does. Sinek calls this powerful idea *The Golden Circle*, and it provides a framework upon which organizations can be built, movements can

be led, and people can be inspired. And it all starts with WHY.

One of Vogue's Best Books of 2022 So Far, BuzzFeed's Summer Books You Won't Be Able To Put Down, Book Riot's Best Summer Reads for 2022, and Dazed's Queer Books to Read in 2022 "[Nevada] is defiant, terse, not quite cynical, sometimes flip, addressed to people who think they know. It is, if you like, punk rock." —The New Yorker "Nevada is a book that changed my life: it shaped both my worldview and personhood, making me the writer I am. And it did so by the oldest of methods, by telling a wise, hilarious, and gripping story." —Torrey Peters, author of *Detransition, Baby* A beloved and blistering cult classic and finalist for the Lambda Literary Award for Transgender Fiction finally back in print, *Nevada* follows a disaffected trans woman as she embarks on a cross-country road trip. Maria Griffiths is almost thirty and works at a used bookstore in New York

City while trying to stay true to her punk values. She's in love with her bike but not with her girlfriend, Steph. She takes random pills and drinks more than is good for her, but doesn't inject anything except, when she remembers, estrogen, because she's trans. Everything is mostly fine until Maria and Steph break up, sending Maria into a tailspin, and then onto a cross-country trek in the car she steals from Steph. She ends up in the backwater town of Star City, Nevada, where she meets James, who is probably but not certainly trans, and who reminds Maria of her younger self. As Maria finds herself in the awkward position of trans role model, she realizes that she could become James's savior—or his downfall. One of the most beloved cult novels of our time and a landmark of trans literature, Imogen Binnie's *Nevada* is a blistering, heartfelt, and evergreen coming-of-age story, and a punk-smear excavation of marginalized life under capitalism. Guided by an instantly memorable, terminally self-aware protagonist—and back in print featuring a new afterword by the author—*Nevada* is the great American road novel flipped on its head for a new generation.

Statistical Rethinking: A Bayesian Course with Examples in R and Stan builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach

ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models.

The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it

prepares them for more advanced or specialized statistical modeling. **Web Resource** The book is accompanied by an R package (rethinking) that is available on the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.
