How Continuous Education Will Keep Us Competitive in the Global Knowledge Economy Lippincott Williams & Wilkins

This clinical casebook is comprised of surgical cases involving the most important cardiovascular diseases in a concise, easy-to-read format (5x8 in trim size, like other titles in this burgeoning, informal product line in the Springer clinical medicine program). Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as questions and answers (between 8 and 10) about relevant aspects related to the diagnosis and treatment of the addressed disease. The Q&A section will broaden discussion and increase the title's pedagogical value. The casebook features 40 surgical cases in the following thematic areas: Aortic Disease, Arrhythmias, Cardiac Tumors, Coronary Insufficiency, Congenital Heart Disease, Endovascular Therapies, Heart Failure, Heart Transplantation, Mechanical Circulatory Support, Pericardial Disease, Pulmonary Embolism and Valvular Heart Disease. This book will be prepared by the Brazilian Department for Academic Leagues of Cardiovascular Surgery, within the Brazilian Society of Cardiovascular Surgery (BSCVS). This department is the section within BSCVS that consists of the academic leagues of cardiovascular surgery from each university throughout the country. In Brazil, medical academic leagues are organizations that gathers students, interns and residents to discuss a certain topic and promote research and teaching-oriented extra-class activities, supervised by a group of professors. Thus trainees will have involvement in writing the chapters and the senior professor supervisors will edit and finalize the work. Basically, each chapter is written by an intern or resident and, ultimately, his/her supervisor. As the books volume editors, doctors Almeida and Jatene will have final responsibility for the cases and overall manuscript.

Over the last 23 years our identity and mission of the TSRA have expanded to meet the needs of our members by providing peer-based resources and support for cardiothoracic surgery residents to succeed throughout training and launch successful careers. The prior edition of this book, TSRA Clinical Scenarios in Cardiothoracic Surgery, published in 2013 was tremendously successful. The first edition of this book aimed to augment available resident educational resources. It focused on

knowledge application in a dynamic decision-making capacity highlighting surgical technique, practical knowledge and clinical acumen based on a variety of different clinical case scenarios. This edition aims to update this review resource while simultaneously expanding the scope of clinical scenarios to keep pace with the ever-changing clinical cardiothoracic training environment. The aim of this book is to review common, high-yield clinical scenarios that may surface during a cardiothoracic surgeon's practice in congenital, thoracic, or adult cardiac surgery. It was written by residents for residents. We meticulously reviewed and edited all previous clinical case scenario chapters focusing on updated clinical and scientific evidence. The first edition contained 72 chapters authored by over 50 residents and faculty from across the country. The new edition contains 19 new chapters (36-chapter revisions) with 91 chapters authored by 159 residents and faculty nationwide! We have maintained the structure and flow of the book utilizing the three major sections of cardiothoracic surgery: General Thoracic Surgery, Adult Cardiac while expanding the congenital section to be Congenital Cardiothoracic Surgery.

Sugarbaker's Adult Chest Surgery, 3rd edition Springer

This first edition of Single Best Answer Questions in Cardiothoracic Surgery provides a comprehensive revision aid to the candidates taking the specialty examination in Cardiothoracic Surgery world-wide. This new revision aid provides over 300 single best answer practice questions in Cardiothoracic Surgery and conforms to the recent changes in the format of specialty examinations in Cardiothoracic Surgery. Each question has been carefully formulated to cover an important topic in cardiothoracic surgery. The questions cover the complete specialty examination syllabus and a considerable number of these have been based on previous examination questions. This book contains a substantial number of patient-based questions or clinical vignettes that will enable prospective candidates to test their ability to integrate key basic science concepts with relevant clinical problems. In addition factual recall questions have also been included that probe for basic recall of facts. Detailed and comprehensive explanations, rather than just brief answers, to questions have been provided so that the candidates do not have to consult textbooks for clarification as is the case with most other MCQs books currently available in the market. A list of relevant references is provided at the end of each answer to enable candidates to read the most up to date journal articles on the subject. The questions in this book can be used in a number of ways: (1) as a diagnostic tool (pretest), (2) as a guide and focus for further study, and (3) for self-assessment. The least effective use of these questions is to study them by reading them one at a time, and then looking at the correct response. These over 300 practice questions are intended to be an integral part of a well-planned review as well as an isolated resource. If used appropriately, these questions can provide self-assessment information beyond a numeric score. Furthermore, the questions have been planned in such a way that this book can be used as companion to any textbook of Cardiothoracic Surgery.

TSRA Review of Cardiothoracic Surgery (2nd Edition) CRC Press

The complexity of decision making in thoracic surgery is growing exponentially. As new technology is introduced, physicians from nonsurgical specialties offer alternative and competing therapies for what was once the exclusive province of the thoracic surgeon. In addition, there is increasing knowledge regarding the efficacy of traditional thoracic surgical therapies. How to select among these varied and complex approaches is becoming increasingly difficult. The first two editions of this book have found wide acceptance among practicing surgeons, trainees, and educators. Chapters from them are regularly cited by the Thoracic Surgery Directors Association as valuable resources for their weekly curriculum exercises. As in the first two editions, chapters adhere to a specific format (updated for the third edition). This approach provides uniformity to the presentations, making it possible to identify useful material at a glance.
