Against this current trend of low growth and high uncertainty, business directors must work with their shareholders to set

strategic objectives and define business models. The great number of possible strategies makes this type of management very complex, and the actual deployment of strategic choices is often limited by a lack of overall coherence within the organization. This problem calls for an

appropriate and renewed response. In strategic management today, a closer, permanent dialogue is needed between operational and financial performance. Based on a supply chain approach, the Value Added Supply Chain (VASC) model focuses on driving operational

performance, but aims to achieve a greater and more dynamic integration between these two dimensions of the company's value creation. Mariage du droit et de la comptabilité en OHADA Springer

The brand is the company's most important asset. In their financial statements, companies are faced with a lack of accounting recognition for the brands they have created, and value recognition for the brands they have acquired. This book studies the nature,

characteristics and determinants of brand information published in companies' annual and financial reports. It presents case studies on the methods of evaluating and developing brands, and analyzes annual reports published by listed companies, whose brands appear in international rankings. It reflects on the inadequacy of information and disclosed data to demonstrate the value of brands and the need to ensure that more reliable and relevant financial information is available to

investors. Financial Information and Brand Value goes beyond the simple application of conceptual frameworks in order for the reader to master the practices related to brand valuation.

Accounting)Routledge Les Livres de L'année University of California Press Almost all economists, whether classical, neoclassical or Marxist, have failed in their analyses of capitalism to take into account the underpinning systems of accounting. This book draws attention to this lacuna, focusing specifically on the concept of capital: a major concept that dominates all teaching and practice in both economics and

management. It is argued that while for the practitioners of capitalism – in accounting and business – the capital in their accounts is a debt to be repaid (or a thing to be kept), for economists it has been considered a means (or even a resource or an asset) intended to be worn out. This category error has led to economists failing to comprehend the true nature of capitalism. On this basis, this book proposes a new definition of capitalism that brings about considerable

changes in the attitude to be had towards this economic system, in particular the means to bring about its replacement. This book will be of significant interest to readers to political economy, history of economic thought, critical accounting and heterodox economics.

Twentieth Century Accounting Thinkers (RLE Accounting)

Bern, Berlin, Frankfurt/M., New York, Paris, Wien.

This book is a philosophical analysis of accounting. The causes and effects in accountancy have been studied by the author - general principles and concepts of accounting as causes and the accounting techniques and procedures as effects. A new accounting principle - the informative principle - is presented; and for the first time in accounting literature, a « dynamic relation between the income statement and

the balance sheet has been illustrated. This book not only answers the question of how in accounting, but also answers the question of why. Throughout the book, a great number of new ideas are introduced by the author. While studying accounting practice to probe the role and impact of accounting principles, a number of present day accounting practices are criticized by the author. For example, she does not regard « income tax as an expense; she considers «

bad debt expense as a contra-sale account; and she believes that the nature and structure of the balance sheet should be studied under a combined claim-contribution approach. *Modelling in Life Insurance - A Management Perspective* Sainte-Foy, Québec : É. This book continues the discussion on recent developments relating to ethical and sustainable issues in accounting & finance from Ethics and Sustainability in Accounting and Finance, Volume I. Accounting is often seen as a technical discipline that records, classifies and reports financial transactions. However, since the financial information produced concerns all interest groups both within and outside the enterprise, accounting also has social

characteristics and involves multi-faceted duties and responsibilities. As such, in addition to basic principles and accepted rules and standards in the field, this book focuses on the ethical aspects and fundamentals of this profession that accountants should also take into consideration, as this is the only way to build and preserve society's confidence in accounting and increase its social credibility.

Starting with the first "scientific" economists such as Cantillon (1755) and Quesnay (1758) and ending with Piketty (2019), this book explores the treatment of the concept of capital in the history of accounting and economic thought. The work provides a rare juxtaposition of the reasoning, discourse and writings of accountants and economists. With regard to 'capital', this approach highlights the ongoing struggle between these "uncongenial twins" – as Kenneth Boulding put

it – for primacy in analysing, and utilising, capitalism. But if they are certainly "uncongenial", the book also argues that it is wrong to ever classify these two disciplines as "twins" because they have taken very different paths ever since scientism came to dominate in economics and ethical and moral considerations were put to one side. This book will be of significant interest to readers to history of economic thought, critical accounting and heterodox economics.

European Financial

Reporting: A History is primarily a reference work for those interested in financial accounting and reporting. It is the first English language source that analyses the historical development of accounting in different European countries, and thereby provides relevant material for the study of comparative international accounting. Because the sum of accounting practices in any jurisdiction at any time

represents an accumulation of past decisions, reactions to past events and initiatives in the past which have occurred in relation to an evolving social and economic culture, it follows that to study the accounting of the present, one must study the accounting of the past, and this book makes a first attempt to provide material which will help in that aim.

This book examines a period of particular importance in the formation of the modern French state. The revolutionary strife and international war of the 1790s had important and far-reaching consequences for the

development of democracy and bureaucracy in France. Howard G. Brown's study of changes in army administration in this period sheds light on the dynamic relationship between the spread of political participation, the rationalization of public power, and the build-up of military might. Dr Brown shows how the exigencies of war and the vagaries of revolutionary politics wrought rapid and profound changes in the structures and personnel of army administration.

Although loath to see a massive military bureaucracy take root,

legislators found that their desire to combine civilian control with military effectiveness made a

large central administration unavoidable.
