Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. Early Warning Systems and Targeted Interventions for Student Success in Online Courses is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems

and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.

Database research and development has been remarkably successful over the past three decades. Now the field is facing new challenges posted by the rapid advances of technology, especially the penetration of the Web and Internet into everyone's daily life. The economical and financial environment where database systems are used has been changing dramatically. In addition to being able to efficiently manage a large volume of operational data generated internally, the ability to manage data in cyberspace, extract relevant information, and discover knowledge to support decision making is critical to the success of any organization. In order to provide researchers and practitioners with a forum to share their experiences in tackling problems in managing and using data, information, and knowledge in the age of the Internet and Web, the First International Conference on Web-Age Information Management (WAIM 2000) was held in Shanghai, China, June 21-23. The inaugural conference in its series was well received. Researchers from 17 countries and regions, including Austria, Australia, Bahrain, Canada, China, France, Germany, Japan, Korea, Malaysia, The Netherlands, Poland, Singapore, Spain, Taiwan, UK, and USA submitted their recent work. Twenty-seven regular and 14 short papers contained in these proceedings were presented during the two-day conference. These papers cover a large spectrum of issues, from classical data management

such as object-oriented modeling, spatial and temporal databases to recent hits like data mining, data warehousing, semi-structured data, and XML. [The Pearson Complete Guide to the SAT](#) New Leaf Publishing Group

The Capitular Development Course is designed to educate Royal Arch Masons, in particular those who are members of the American or York Rite practiced in the United States and a number of other countries around the world. While the book may certainly be read on its own, having a copy of the Holy Bible to hand would assist in understanding much of the symbolism. This book is also intended to be used as a part of a course, run by a Facilitator, when a copy of the State Capitular Rituals should be used to accompany this course. Upon completion of the course, the Companion may consider himself both well versed in the messages and symbolism of the Capitular Degrees, and qualified to pursue his own further education. To this end, a number of books and courses recommended for further study are given at the end of this book.

User interface (UI) design rules and guidelines, developed by early HCI gurus and recognized throughout the field, were based on cognitive psychology (study of mental processes such as problem solving, memory, and language), and early practitioners were well informed of its tenets. But today practitioners with backgrounds in cognitive psychology are a minority, as user interface designers and developers enter the field from a wide array of disciplines. HCI practitioners today have enough experience in UI design that they have been exposed to UI design rules, but it is essential that they understand the psychological basis behind the rules in order to effectively apply them. In *Designing with the Mind in Mind*, best-selling author Jeff Johnson provides designers with just enough background in perceptual and cognitive psychology that UI design guidelines make intuitive sense rather than being just a list of rules to follow. Provides an essential source for user interface design rules and how, when, and why to apply them Arms designers with the science behind each design rule, allowing them to make informed decisions in projects, and to explain those decisions to others Equips readers with the knowledge to make educated tradeoffs between competing rules, project deadlines, and budget pressures Completely updated and revised, including additional coverage in such areas as persuasion, cognitive economics and decision making, emotions, trust, habit formation, and speech UIs

English language teaching (ELT) has changed dramatically over the past decade in Asia, an area of the world where English is taught as a foreign language, rather than a second language. A drastic movement has been made from the traditional Grammar-Translation Method to more communicative approaches to teaching and learning, such as project-based and task-based learning. In this book, the authors outline the development of ELT in Asia in the past decade in the wider context of educational reform in the region which puts greater value on the acquisition of English and in student-centered classrooms. Given the growing importance of English and the enormous energy and enthusiasm in the region for learning the language in both formal and informal contexts, ELT will continue to flourish. University and secondary school teachers and researchers from five different Asian countries share methodologies and innovative programs that they have found to be successful in their classrooms, including ideas for technology-enhanced language learning. This volume offers insight into the daily academic lives of secondary and university English language classrooms across the region and shows how English is currently being reframed in this vibrant region.
