Advances in Exercise Adherence

National Academies Press
 O Tratado de Ginecologia da Febrasgo, atualizado de acordo com as mais recentes publicações, aborda os temas mais relevantes para o residente e o especialista, e foi escrito em linguagem clara e objetiva para facilitar a compreensão. A elaboração deste tratado contou com a participação dos presidentes das Comissões Nacionais Especializadas (CNE) da Febrasgo, que escolheram os autores de cada capítulo de acordo com sua área de atuação. Assim, tivemos a participação dos principais formadores de opinião das diversas universidades de todo o território nacional, representando,

dessa forma, as várias linhas acadêmicas do país. Esta obra é composta por 83 capítulos, incluídos em 13 seções, que abordam os principais temas relacionados com a Ginecologia: geral, sexologia, diagnóstico em ginecologia, infanto-puberal, infecções, ginecologia endócrina, reprodução humana, climatério, uroginecologia, planejamento familiar, oncologia ginecológica e mastologia.

The Clinical practice handbook for safe abortion care is intended to facilitate the practical application of the clinical recommendations from the second edition of Safe abortion: technical and policy guidance for health systems (World Health Organization [WHO] 2012). While legal, regulatory, policy and service-delivery

contexts may vary from country to country, the recommendations and best practices described in both of these documents aim to enable evidence-based decision-making with respect to safe abortion care.

Revisits and updates the centrality of the social construction of sexuality, especially in the age of Viagra, FSD (female sexual dysfunction) and the media saturation of sex. Leonore Tiefer is one of the foremost sexologists working in the United States today; she is a well-known and respected scholar who writes engagingly and humorously about a wide array of topics in sexuality to appeal to both students and general readers. Revised and updated with new pieces on the medicalization of sex,

FSD (female sexual dysfunction) and the politics of sex, as well as classic pieces found in the original edition, such as "Am I Normal?: The Question of Sex." *Obstetrical Practice* McGraw Hill Professional

This book presents up-to-date knowledge on infertility in the context of polycystic ovary syndrome (PCOS) and provides clear evidence-based guidance on its treatment. The book opens by discussing anovulation, oocyte quality, and the endometrium in women with PCOS, infertility and subfertility cofactors, and the impact of PCOS phenotypes on fertility. All aspects of management are then thoroughly addressed. The available medical treatments for PCOS-related infertility - including antiestrogens, aromatase inhibitors, insulin-sensitizing drugs, and gonadotropins - are reviewed, and other potential therapeutic approaches, such as acupuncture and laparoscopic ovarian drilling, are assessed. Careful attention is also devoted to the role of lifestyle interventions. The use of controlled ovarian stimulation in infertile PCOS patients undergoing intrauterine insemination or in vitro fertilization is examined in detail, as are the benefits of in vitro maturation of oocytes. This book will be of value to all who are involved in the care of women with PCOS and related infertility issues.

A growing concern in most regions of the world is the heightened incidence of criminal and violent behavior, especially in the Latin American and Caribbean Region. This study uses a new data set of crime rates for a large sample of countries to analyze the determinants of national homicide and robbery rates. The authors describe a simple model of "incentives to commit crimes" by estimating several econometric models and utilizing empirical models to draw their conclusions.

A compelling vision of a new reality, a reconciliation of science and the human spirit for a future that will work The dynamics underlying the major problems of our time—cancer, crime, pollution, nuclear power, inflation, the energy shortage—are all the same. We have reached a time of dramatic and potentially dangerous change, a turning point for the planet as a whole. We need a new vision of reality, one that allows the forces transforming our world to flow together as a positive movement for social change. Now distinguished scientist Fritjof Capra gives us that vision, a holistic paradigm of science and spirit. "This splendid and

thoughtful book is an essential guide for anyone inquiring about the place of science and metascience in our contemporary culture. Those who enjoyed Fritjof Capra's *Tao of Physics* should not expect a sequel; this is a much more ambitious book that attempts and succeeds in presenting a whole worldview from the viewpoint of a committed and experienced physicist who also writes from within the North American culture.... It is unusually detailed and thorough in its inclusion of the conventional and the alternative approaches to topics ranging from ecology through medicine and psychology to economics. It is at once scholarly and easy to read."—Jim Lovelock, *New Scientist*

Between 1540 and 1654, 'The Byrth of Mankynde' was a huge commercial success. Offering information on fertility, pregnancy, birth and infant care, it influenced most other works of the period bearing on sex, reproduction and childcare. For this new annotated edition of the 1560 version, Elaine Hobby has included informative notes.

Febrasgo - Tratado de Ginecologia Springer

The number of studies on chronic and recurrent pain bears no relation to the frequency of these complaints in gynecologic practice, nor to the clinical and scientific problems that still need solving in this area. Several factors stand

in the way of progress in this field, such as the strongly subjective nature of the complaints, the frequent lack of correlation between them and objective findings, and the complexity of the psychosomatic interactions involved. Although progress in our knowledge has been much slower than we would have wished, and although we are well aware of these many gaps, it was considered useful to gather in a book what we think we have learned during 3 decades of active interest in pain patients and pain problems in gynecologic practice and 12 years of supervision of a pain clinic in the Department of Obstetrics and Gynecology of Leuven University. As there are many differences between acute pain - clinical as well as experimental - on the one hand and chronic pain symptoms on the other, it was felt preferable to limit the scope of this book essentially to chronic and recurrent pain in gynecologic practice. When presented with a complaint of lower abdominal and/or low back pain, the gynecologist should constantly be on the lookout for nongynecologic causes, of which the most frequent will be either gastroenterologic or orthopedic and sometimes urologic. I have been fortunate in obtaining the collaboration of Dr.

Andrology for the Clinician consists of two parts: In Part One, the busy clinician can easily find the problem-orientated information he or she needs on such issues as male factor fertility problems, male contraception, and male genital tract infection and tumours. Part Two contains in-depth subject-orientated information and adds important scientific background information to the recommendations received in Part One. Several leading experts have contributed to this work, which has been extensively subedited by world-renowned editors to ensure a well-structured didactic design and homogeneous content. This outstanding book is of great value for all Urologists, Andrologists, Dermatologists, Endocrinologists, Gynaecologists, Reproductive Biologists, GPs, Gerontologists, Psychologists, Psychiatrists, Paediatricians and anyone else interested in the problems of male sex and constitution.

Atlas of Pelvic Anatomy and Gynecologic Surgery E-Book Oxford University Press
Biosocialities, Genetics and the Social Sciences explores the social, cultural and economic transformations that result from innovations in genomic knowledge and technology. This pioneering collection uses Paul Rabinow's concept of biosociality to

chart the shifts in social relations and ideas about nature, biology and identity brought about by developments in biomedicine. Based on new empirical research, it contains chapters on genomic research into embryonic stem cell therapy, breast cancer, autism, Parkinson's and IVF treatment, as well as on the expectations and education surrounding genomic research. It covers four main themes: novel modes of identity and identification, such as genetic citizenship the role of institutions, ranging from disease advocacy organizations and voluntary organizations to the state the production of biological knowledge, novel life-forms, and technologies the generation of wealth and commercial interests in biology. Including an afterword by Paul Rabinow and case studies on the UK, US, Canada, Germany, India and Israel, this book is key reading for students and researchers of the new genetics and the social sciences – particularly medical sociologists, medical anthropologists and those involved with science and technology studies.

This document is one of two evidence-based cornerstones of the World Health Organization's (WHO) new initiative to develop and implement evidence-based guidelines for family planning. The first cornerstone, the *Medical eligibility criteria for contraceptive use (third edition)* published in 2004, provides guidance for who can use contraceptive methods safely. This document, the *Selected practice recommendations for contraceptive use (second edition)*, provides guidance for how to use contraceptive methods safely and effectively once they are deemed to be medically appropriate. The recommendations contained in this document are the product of a process that culminated in an expert Working Group meeting held at the World Health Organization, Geneva, 13-16 April 2004.

Cervical cancer is the second most prevalent cancer among women worldwide, and infection with Human Papilloma Virus (HPV) has been identified as the causal agent for this condition. The natural history of cervical cancer is characterized by slow disease progression, rendering the condition, in essence,

preventable and even treatable when diagnosed in early stages. Pap smear and the recently introduced prophylactic vaccines are the most prominent prevention options, but despite the availability of these primary and secondary screening tools, the global burden of disease is unfortunately still very high. This book will focus on the clinical aspects of HPV and related disease, highlighting the latest developments in this field.

Chronic Pelvic Pain in Women CRC Press

The present book is an illustrated guide on fetal medicine, including a wealth of normal and pathological/malformations ultrasound images, throughout the whole pregnancy. Thus, the book intends to fill two gaps in once: The lack of a material discussing the basic principles of fetal ultrasound, which are the basement for a more efficient learning in fetal medicine. . The need for a thorough approach in fetal medicine, presenting both normal and pathological imaging, allowing a detailed evaluation of clinical conditions of importance in prenatal care and follow up. The *Atlas of Ultrasound Imaging* is an up to date guide to all obstetricians, gynecologists and pediatricians who intend to upgrade their knowledge in fetal medicine, as well as to any other professional, professor, student or research interested in fetal ultrasound.

Caesarean Section has become the most common major operation in the world, and with the increasing number there are many serious and long-term healthcare implications for gynaecology, general surgery, neonatology, and epigenetics. A full perspective of the procedure and its consequences is therefore essential for practitioners, residents, and trainees alike.

The *Textbook of Caesarean Section* is the key textbook on this subject, and is an informative and practical tool for clinicians performing this procedure in all areas of the world. The accompanying professional medical videos demonstrate in clear and expert detail the two alternative procedures for caesarean section, ensuring that readers of this book gain an in-depth understanding of the techniques involved, and supporting blended learning in postgraduate education globally.

Written by a distinguished team of expert contributors, this book carefully describes current best practice for caesarean section alongside key chapters on the history of caesarean section, and other important and related issues that obstetricians must be aware of, such as anaesthesia, prevention of complications of surgery,

reproduction after C-section, and perinatal outcomes. The text is extensively illustrated with colour images, and fully referenced throughout, providing all the information essential for the reader to perform the optimal caesarean delivery procedures, and diagnose and manage the short- and long-term complications associated with different methods of caesarean sections.
