Blueprint Reading for Electricians 3rd edition

Electrical Trades: Industrial Cengage Learning

This Blueprint Reading for Electricians - Part 1 Student Workbook is the companion text necessary for students attending a Blueprint Reading for Electricians - Part 1 class. In this class, students get to use

actual blueprint sets to learn about applying scale measurements to blueprints, blueprint sheet types and the kinds of information that can be found on them, and finding information within blueprints that electricians need to planelectrical installations. This student workbook includes a course outline, visual presentations of the course material with space for notes, fill-in quizzes for grading by the instructor, and educational/professional development action plans. Instructors should purchase the "Blueprint Reading for Electricians-Part 1, Instructor Guide and Resource DVD" which contains visual presentations, lecture and discussion guides, exam keys, and grading guidelines. The Resource DVD includes multimedia presentations to match the visual presentations in the text, complete digital blueprint files and a print

guide for reproduction of full-size blueprint sets, and a final exam production file.

Reading a blueprint is like reading a road map. It tells you exactly what you are required to build. Read it wrong and you will build it wrong -- and that can be expensive. This book explains how to read and interpret all types of electrical drawings and diagrams used in residential and commercial construction. There are details on electrical floor plans, lighting layouts, and schematics showing single line and block or power-riser diagrams for wiring circuits. Learn how to lay out an electrical project, what to look out for in dealing with construction specifications and drawings -- especially in terms of today's technology, how to use an

engineer's scale for developing and reading site plans, and how to make up and use panel board, connected-load, and other schedules.

This Blueprint Reading for Electricians - Part 2 Student Workbook is the companion text necessary for students attending a Blueprint Reading for Electricians - Part 2 class. In this class, students get to use actual blueprint sets to practice coordinating information from multiple blueprint sheets for a commercial office building project with equipment and materials requirements and the NEC. Students plan for the installation of conductors, grounding electrode conductors, main bonding jumpers, services, and transformers, and learn how to perform commercial load calculations. This student workbook includes a course outline, visual presentations of the course material with space for notes, fill-in quizzes for grading by the instructor, and educational/professional development action plans. This is not a standalone teach-yourself-blueprint-reading text. Instructors should purchase the "Blueprint Reading for Electricians - Part 2, Instructor Guide and Resource DVD," also available on Amazon.
