industryCodeigniter User Guide

RedirectThe default value is 302 which is a

temporary redirect and is recommended in

most cases: \$routes->add('users/profile',

'Users::profile', ['as' => 'profile']); //

Redirect to a named route

\$routes->addRedirect('users/about',

'profile'); // Redirect to a URI

\$routes->addRedirect('users/about',

'users/profile');URI Routing — Codeigniter

4.0.4 documentationTo IIS users: if you

hide the Server HTTP header, the auto

method won't detect IIS, in that case it is

advised you explicitly use the refresh

method. Note When the location method is

used, an HTTP status code of 303 will

automatically be selected when the page

is currently accessed via POST and

HTTP/1.1 is used.URL Helper —

CodeIgniter 3.1.11 documentation
`echo base_url();` This function returns the same thing as `site_url()`, without the `indexPage` being appended. Also like `site_url()`, you can supply segments as a string or an array. Here is a string example: `echo base_url('blog/post/123');` The above example would return something like: `http://example.com/blog/post/123`.

[CodeIgniter User Guide. URL Helper.](#) The URL Helper file contains functions that assist in working with URLs.
[URL Helper : CodeIgniter User Guide](#)
 As a first step, open your `app/Config/App.php` file and look for the URI Protocol information. It will recommend that you try a couple of alternate settings. If it still doesn't work after you've tried this you'll need to force CodeIgniter to add a question mark to your URLs. To do this open your `app/Config/App.php` file and change this:
