Group Trauma Treatment in Early Recovery Guilford Publications

'This new edition of Clinical Pharmacy and Therapeutics was really very helpful when I was doing an MSc course in Advancing Pharmacy Practice and it was really very helpful in all the clinical diseases I have to read for my PBL. I also used it as one of my most reliable reference books for the in-course simulation ward rounds and other clinical case studies. It is a great book to have as a practising clinical or hospital pharmacist or even community pharmacist. It will also be of great use to anyone doing a course in pharmacotherapy. This book will always be of use to you throughout your studentship or when practising after graduation. It is also more portable than most other pharmacotherapy textbooks with the same amount of information.' Now in its sixth edition, this best-selling, multi-disciplinary textbook continues to draw on the skills of pharmacists, clinicians and nurses to present optimal drug regimens. The authors integrate an understanding of the

disease processes with an appreciation of the pathophysiological processes, clinical pharmacy and the evidence base. Each chapter is co-written by a pharmacist and a clinician, and each chapter begins with key points and ends with cases to test understanding. The sixth edition is now on StudentConsult for the first time, giving online access to the full text. Key points boxes at the beginning of each chapter Case-study boxes throughout the chapters Each chapter co-written by a pharmacist and a clinician In-depth treatment of therapeutics to support pharmaceutical prescribing Logical order and format: key points, epidemiology, aetiology, disease, clinical manifestations, investigations and treatment, drugs used in treatment. This book examines how complementary and alternative medicine (CAM) – as knowledge, philosophy and practice – is constituted by, and transformed through, broader social developments. Shifting the sociological focus away from CAM as a stable entity that elicits perceptions and experiences, chapters explore the forms that CAM takes in different settings, how global social transformations elicit varieties of CAM, and how CAM philosophies and practices are co-produced in the context of social change. Through engagement with frameworks from Science and Technology Studies (STS), CAM is reconceptualised as a set of practices and knowledge-making processes, and opened up to new forms of analysis. Part 1 of the book explores how and why boundaries within CAM and between CAM and other health practices, are being constructed, challenged and changed. Part 2 asks how CAM as material practice is shaped by politics and regulation in a range of national settings. Part 3 examines how evidence is being produced and used in CAM research and practice. Including studies of CAM in Eastern and Western Europe, Asia, and North and South America, the volume will appeal to postgraduate students, researchers and health practitioners.

Clinical Pharmacy and Therapeutics E-Book Policy Press

The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist – like evidence-based medications – are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.
