**Life-span Human Development** McGraw-Hill Companies  
Life-span Human Development Wadsworth Publishing Company  
*Supporting and Transforming Business* Mosby Incorporated  
The new edition enables professors to teach a broad range of traditional and innovative land use law subjects, ranging from zoning and site planning to sustainable development. The first six chapters of the book focus on traditional practice areas in land use regulation at the state and local levels, and includes a full range of federal First and Fifth Amendment issues as well as preemption (all from the existing chapters in the book which have updated notes/commentary and a sprinkling of new principal cases, enough to modernize the book without requiring significant teaching overhauls). For a nuts-and-bolts approach to land use law the first two-thirds of the book will fully cover a three-credit course. The next three chapters explore land use techniques that go beyond traditional planning and Euclidean zoning such as smart growth, transit-oriented development, new urbanism, and form based zoning. Energy and building codes that address environmental and social concerns are explored, as is the topic of local environmental law that includes: aquifer, wetlands, habitat, and steep slopes protection; storm water control; and floodplains

management. How environmental impact review, biological sequestration, and climate change mitigation integrate with local land use regulation is also explored. The book ends with a focus on the critical connection between human settlement patterns- the result of local zoning and land use plans-and climate change management, where students examine methods employed by local governments, with state encouragement, to use land use planning and regulation to design buildings, neighborhoods, cities, and regions to reduce energy and fossil fuel consumption and lower carbon dioxide emissions. For professors and students interested in discovering effective methods for dealing with the worsening threat of climate change, workable strategies and needed encouragement are provided. The last third of the book works well for faculty who wish to challenge students to creatively apply the tools they have learned about to address cutting edge issues facing communities. Faculty have used this material in the basic land use course, as a one credit add-on, and as material for an advanced land use course (making it convenient for students to keep the book).

On the basis of a theologically grounded understanding of the nature of persons and the self, Jack O. Balswick, Pamela Ebstyne King and Kevin S. Reimer present a model of human development that ranges across all of life's stages. This revised second edition engages new research from evolutionary psychology, developmental neuroscience and positive psychology.

**Human Development** Routledge

Intended for courses on theories of human development, this new text presents nine theories grouped into three major families - those that emphasize biological systems; those that emphasize environmental factors; and those that emphasize a dynamic interaction between biological and environmental forces. The nine theories selected have a long and productive history in human development and continue to evolve as a result of new insights. The inclusion of social role theory and life course theory expand the book's relevance to the study of adulthood and aging. Grouping the theories by families enhances students' ability to think critically about theoretical ideas, assess the strengths and weaknesses of each theory, and gain a deeper understanding of how each theory guides research and application. The three families are introduced with a brief overview of the unique perspectives of each theory and the rationale for grouping these theories together. Discussion of each theory includes: the historical and cultural context in which the theory was developed; an overview of key concepts and important ideas; new directions in contemporary scientific work; a research example illustrating how the theory has been tested and modified; an application showing how the theory has guided the design of an intervention or program; an analysis of how the theory answers basic questions about human development; and a critique highlighting the theories' strengths and weaknesses. Theories of Human Development serves as a text in advanced undergraduate and/or beginning graduate courses in theories of human development. Its clear organization and engaging writing style make it accessible to students with a minimal background in human development.

**Understanding Human Behavior and the Social Environment** Psychology Press

Introduction to Human Development and Family Studies is the first text to introduce human development and family studies (HDFS) as inextricably linked areas of study, giving students a complex yet realistic view of individuals and families. Pioneers of research paradigms have acknowledged that the family is one setting in which human development occurs. Moreover, in many academic programs, the lines of these two disciplines blur and much work is inherently multidisciplinary and interdisciplinary. This book helps to fortify an understanding of HDFS and subareas within it. Vignettes from current HDFS students as well as new professionals, an overview of the lifespan stage(s) within the family context, a wide description of research methods and

applications, current policy issues relevant to the area, and discussions of practice/careers coupled with strategies for pursuing specializations or careers in the area are hallmarks of this textbook. Introduction to Human Development and Family Studies is essential reading for students new to the major and minor wanting to know: What is HDFS? Who are the people involved in HDFS? Why is HDFS important? How does theory and research inform work in HDFS? What does the pursuit of being an ethical professional require? What are the key areas in HDFS?

Incredibly user-friendly both on the page and online, the text also features the following resources: Chapter Summaries where the main points of each chapter are pinpointed at the end of every chapter for review and study. Key Terms listed and defined within the margins of every chapter, a complete Glossary at the end of the text, and Flashcards online for additional review and study. Challenge: Integration section at the end of each chapter that underscores concepts from the chapter and draws connections between content presented in other chapters. Journal Questions to encourage reflection about the content and encourage thinking

about some of the content coupled with students' own experiences. Suggested Resources that lists relevant websites, books, articles, and video links for further study. A Closer Look at Applied Experiences Appendix outlines the internship process and shows how the internship experience can be meaningful and useful, and a Consuming Research Appendix that focuses on what it means to be a consumer of research, the knowledge and skills consumers need, and considerations for transitioning from a consumer of research to a producer of research.
