Why Groups Go to Extremes Springer Science & Business Media

This book offers a survey of the state of the art in the field of motion sickness. It begins by describing the historical background and the current definition of motion sickness, then discusses the prevalence among individuals, along with the physiological and psychological concomitants of the disorder. It reviews the incidence of motion sickness in numerous provocative motion environments and discusses various personal factors that appear to influence this aspect. Various characteristics of provocative motion stimuli are also described, together with the results of studies conducted in the laboratory, on motion simulators and at sea. Laboratory tests that could potentially be used to assess an individual's susceptibility to motion sickness and his or her ability to adapt to motion environments are presented in detail, together with the ways in which individuals might be trained to prevent motion sickness or more effectively cope with motion environments. In closing, the book reports on the cognitive-behavioral approach developed by the author (Dobie, 1963) as well as the various desensitization programs employed in military settings, and discusses the relative effectiveness of these methods in comparison to cognitive-behavioral counseling.

This book initially was conceived in 1986 by Weary and Harvey as a revision and update of their 1981 *Perspectives on Attributional Processes* (published by Wm. C. Brown, Dubuque, Iowa). However, the extensive nature of recent work on attributional processes and the opportunity to collaborate with Melinda Stanley as a coauthor led to a plan to develop a more comprehensive work than the 1981 book. It definitely is an amalgam of our interests in social and clinical psychology. It represents our commitment to basic theoretical and empirical inquiry blended with the applications of ideas and methods to understanding attribution in more naturalistic settings, and as it unfolds in the lives of different kinds of people coping with diverse problems of living. The book represents a commitment also to the breadth of approach to attribution questions epitomized by Fritz Heider's uniquely creative mind and work in pioneering the area. To us, the attributional approach is not a sacrosanct school of thought on the human condition. It is, rather, a body of ideas and findings that we find to be highly useful in our work as social (JH and GW) and clinical (GW and MS) psychology scholars. It is an inviting approach that, as we shall describe in the book, brings together ideas and work from different fields in psychology—all concerned with the pervasive and inestimable importance of

interpretive activity in human experience and behavior.

The Brain Reward System Springer Science & Business Media

This volume explores the latest techniques used to better understand the brain reward system with respect to neurotransmitters, brain structures, and connectivity. This book aims to show readers tested laboratory protocols to study neural circuitry and biological processes implicated in reward, and in neuropsychiatric disorders such as substance use disorders. The chapters are organized into four parts. Part One addresses classical techniques to study the brain reward system, including the curve shift paradigm in intracranial self-stimulation, stereotaxic surgery in rodents, and the use of brain lesions. Part Two focuses on neurochemical, behavioral, and chemogenetic techniques such as immunofluorescence for assessing adult hippocampal neurogenesis, and fast-scan voltammetry. Part Three highlights methods used to assess the rewarding potential of drugs including intracranial self-stimulation combined with drug injection, and the use of viral vectors. The Fourth Part introduces imaging and electrophysiology techniques such as positron emission tomography, in vivo electrophysiology, and fiber photometry. In the *NeuroMethods* series style, chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory. Cutting-edge and thorough, *The Brain Reward System* is a valuable resource for researchers interested in learning more about the current methods used to study the delineation of the brain reward system.

"A truly extraordinary book! The range of knowledge revealed by the author is quite astonishing and the material presented is done so in a clear and unambiguous writing style." "The book includes astonishingly varied perspectives on issues that will impact the hoped-for positive consequences of globalization. I felt I was being informed by an expert who grasps the complexity of the issues involved in ways that make them clear and useful. If I was teaching a course that had anything to do with globalization and/or culture, I would assign this book—and if I knew of someone who was being assigned to another country, I would require him or her to read this book." —Benjamin Schneider, Valtera Corporation and Professor Emeritus, University of Maryland What is a paradox? Why are cross-cultural paradoxes essential for understanding the changes that are occurring because of globalization? Encompassing a wide variety of areas including leadership, cross-cultural negotiations, immigration, religion, economic development, and business strategy, *Paradoxes of Culture and Globalization* develops cross-cultural paradoxes essential for understanding globalization. Key Features Highlights over 90 paradoxes structured in a question/discussion format to actively engage readers and provide an integrative overview of the book Presents key issues at a higher and integrative level of analysis to avoid stereotyping particular cultures Facilitates class discussions and the active involvement of class members in the learning process of culture and globalization. Enlarges individuals' conceptual understanding of cross-cultural issues Focuses on both traditional and controversial topics including motivation and leadership across cultures, communicating and negotiating across cultures, immigration, religion, geography, economic development, business strategy, and international human resource management Intended Audience This is an excellent text for advanced undergraduate and graduate courses in International Management, International Business, Comparative Management, World Business Environment, Cross-Cultural Management, Cross-Cultural Communications, and Cultural Anthropology in the departments of business and management, communication, and anthropology. Meet author Martin J. Gannon! www.csusm.edu/mgannon Martin J. Gannon is also the author of

Social Marketing to Protect the Environment Human Kinetics
Much has happened since the first appearance of AIDS in 1981: it has been identified, studied, and occasionally denied. The virus has shifted host populations and spread globally. Medicine, the social sciences, and world governments have joined forces to combat and prevent the disease. And South Africa has emerged as ground zero for the pandemic. The editors of *HIV/AIDS in South Africa 25 Years On* present the South African crisis as a template for addressing the myriad issues surrounding the epidemic worldwide, as the book brings together a widely scattered body of literature, analyzes psychosocial and sexual aspects contributing to HIV transmission and prevention, and delves into complex intersections of race, gender, class, and politics. Including largely overlooked populations and issues (e.g., prisoners, persons with disabilities, stigma), as well as challenges shaping future research and policy, the contributors approach their topics with rare depth, meticulous research, carefully drawn conclusions, and profound compassion. Among the topics covered: The relationship between HIV and poverty, starting from the question, "Which is the determinant and which is the consequence?" Epidemiology of HIV among women and men: concepts of femininity and masculinity, and gender inequities as they affect HIV risk; gender-specific prevention and intervention strategies. The impact of AIDS on infants and young children: risk and protective factors; care of children by HIV-positive mothers; HIV-infected children. Current prevention and treatment projects, including local-level responses, community-based work, and VCT (voluntary counseling and testing) programs. New directions: promoting circumcision, vaccine trials, "positive prevention." South Africa's history of AIDS denialism. The urgent lessons in this book apply both globally and locally, making *HIV/AIDS in South Africa 25 Years On* uniquely instructive and useful for professionals working in HIV/AIDS and global public health.

How does group behavior drive extremism and challenge democratic values? The answer lies in social dynamics - the ways people influence one another. Conventional wisdom suggests that open discussion within groups will lead to compromise and moderation, yet just the opposite often occurs. In the course of exchanging opinions, like-minded people frequently develop more extreme versions of their original views on such issues as climate change, labor policy, same-sex relationships, and affirmative action. Groups ranging from citizens' forums to judicial panels tend to squelch diversity and polarize opinion. With the Internet facilitating the formation of like-minded groups, this phenomenon may help account for the intensity and division of contemporary social and political debate. Indeed, the dangers of homogeneity and polarization within groups highlight a fundamental tension between the consequences of free speech and assembly, and the value of intellectual diversity to a civil society. In *Why Groups Go to Extremes*, Cass R. Sunstein argues that the key to preventing the spread of extremist views is not to suppress deliberation among the like-minded; such groups productively challenge conventional thinking and majority opinion. Instead, policymakers should develop institutions to ensure that like-minded groups encounter a diversity of opinions within civil society. The goal, Sunstein contends, must be to create opportunities for civil deliberation that expose like-minded group members to opposing views, while exposing society at large to the views of such groups.

Social marketing takes key marketing principles and applies them to campaigns and efforts to influence social action. In *Social Marketing to Protect the Environment*, the focus turns to the environment, and how social marketing can be successful to change environmental behaviour. The text begins with a definition of the Social Marketing Model and includes a discussion of various tools that can be used to develop social marketing strategies. It then moves into sections on Residential-Related Behaviours and Commercial-Related Behaviours. These sections follow a consistent format and: - Describe a variety of environmental issues - Give examples of the numerous changes in behaviours and/or practices that would contribute to reducing the problem - Provide mini-cases that illustrate the successful use of social marketing principles along with tools to influence this behaviour in similar situations - Review what worked and what could have been improved. A final section provides future directions and recommendations.

Consumer Brand Relationships: Meaning, Measuring, Managing aims to advance our understanding of consumers' relationships with brands by focusing on three key questions: first, why are brand relationships important for companies and what do they mean for companies and consumers? Second, how can companies measure these relationships and how they contribute to financial success? Finally, what can companies do to manage these relationships over time and space? Leading experts from all over the world contribute with eleven chapters to this volume. The first part of the book discusses brand trust, brand identification, brand love, brand commitment, brand defense, brand advocacy, and the brand love life cycle and brand love over time. The second part focuses on how personality and social groups affect brand relationships, including how interpersonal relationships influence brand relationships and how different consumer segments such as children and fans relate to brands. The last part of the book focuses on how to measure and how to manage brand relationships by introducing a new framework for consumer brand relationships. The last two chapters examine the 'Brand Equity Relationship Assessment' (BERA) platform and how it delivers real-time assessment of 'brand love' for 4,000 brands across 200 categories. **Consumer Brand Relationships: Meaning, Measuring, Managing** provides academics, researchers, and students, as well as marketing and branding managers a set of insights into why, how, and what companies should do to build, measure, and manage brand relationships.

The understanding of empirical traffic congestion occurring on unsignalized multi-lane highways and freeways is a key for effective traffic management, control, or- nization, and other applications of transportation engineering. However, the traffic flow theories and models that dominate up to now in transportation research journals and teaching programs of most universities cannot explain either traffic breakdown or most features of the resulting congested patterns. These theories are also the - sis of most dynamic traffic assignment models and freeway traffic control methods, which therefore are not consistent with features of real traffic. For this reason, the author introduced an alternative traffic flow theory called three-phase traffic theory, which can predict and explain the empirical spatiotemporal features of traffic breakdown and the resulting traffic congestion. A previous book "The Physics of Traffic" (Springer, Berlin, 2004) presented a discussion of the empirical spatiotemporal features of congested traffic patterns and of three-phase traffic theory as well as their engineering applications. Rather than a comprehensive analysis of empirical and theoretical results in the field, the present book includes no more empirical and theoretical results than are necessary for the understanding of vehicular traffic on unsignalized multi-lane roads. The main objectives of the book are to present an "elementary" traffic flow theory and control methods as well as to show links between three-phase traffic theory and earlier traffic flow theories. The need for such a book follows from many comments of colleagues made after publication of the book "The Physics of Traffic".

Forming connections between human performance and design Engineering Psychology and Human Performance, 4e examines human-machine interaction. The book is organized directly from the psychological perspective of human information processing. The chapters generally correspond to the flow of information as it is processed by a human being--from the senses, through the brain, to action--rather than from the perspective of system components or engineering design concepts. This book is ideal for a psychology student, engineering student, or actual practitioner in engineering psychology, human performance, and human factors Learning Goals Upon completing this book, readers should be able to: * Identify how human ability contributes to the design of technology. * Understand the connections within human information processing and human performance. * Challenge the way they think about technology's influence on human performance. * show how theoretical advances have been, or might be, applied to improving human-machine interaction
