 Traditional Chinese medicine has a long and complex history, yet the basic principles at the heart of practice have remained the

same for hundreds of years. Without a solid understanding of these fundamental theories, effective practice is impossible, and this book provides a complete introduction to everything that students and practitioners, both new and experienced, need to know. The book describes and explains all of the fundamental principles of Traditional Chinese Medicine, including yin/yang, the five elements, the 'zang and fu' organs, Zang Xiang, Qi, and the meridians and collaterals of the body. Explaining not only the principles upon which these elements work, but also how they interrelate, the book describes how they can be used in practice to identify, treat and prevent ill-health and disease. This thorough and accessible textbook, compiled by the China Beijing International Acupuncture Training Center (CBIATC), under the editorial directorship of leading Chinese clinicians Zhu Bing and Wang Hongcai, is essential reading for students of traditional Chinese medicine, and is also a useful basic reference for TCM practitioners.

Acting as a bridge between the basic theory of Chinese medicine (CM) and various clinical subjects, Diagnostics in Chinese Medicine can be regarded as a core subject in understanding the concept of CM. Based on the national textbooks of CM in China, Diagnostics in Chinese Medicine is written combined with the National Standard and Quality Course given by Professor Chen Jiaxu at Beijing University of CM. According to Professor Chen's long-standing high academic profile and clinical practice, figures and tables are presented clearly to intensify understanding and comprehension. We are sorry that the DVD content are not included.

Energy Medicine East and West: A Natural History of Qi provides a unique, comprehensive overview of Qi or bioenergy for students and practitioners of energy medicines, Chinese and Oriental Medicine, and all disciplines of Complementary and Integrative Medicine. Mayor and Micozzi start with a comparative historical account of the ancient concepts of Qi and vital energy before covering theories of Qi, a discussion of the organized therapeutic modalities based upon Qi and its applications to specific health and medical conditions. Contributions are included from international experts in the field. The book moves from anatomical and bioenergetic complementarity of Western vital energy and Eastern Qi, through convergence of perspectives and models to demonstrations of how the traditional therapies are being melded together in a new, original and creative synthesis. David Mayor and Marc Micozzi are experienced medical practitioners, authors and editors. David Mayor has been actively involved in bioenergy research, practice and publishing for over 30 years, and is author/editor of *Electroacupuncture: A practical manual and resource* (2007), as well as other acupuncture texts and studies. Marc Micozzi is Professor in the Department of Physiology and Biophysics at Georgetown University School of Medicine, Washington, DC. As author/editor of *Fundamentals of Complementary & Alternative Medicine*, 4E (2011), and 25 other books, he has been writing, editing and teaching on bioenergy, Qi and related topics for 20 years. Endorsements "This wonderful book has assembled some 25 authors expressing well a view of qi which entirely does justice to its nature. Meticulously referenced, it is a milestone to set beside Maciocias Foundations of Chinese Medicine and Deadmans Manual of Acupuncture. Here at last are the beginnings of a true science of qi...There is truly nothing like it in contemporary literature. Alone, it lays the foundation for the beginnings of a modern science of qi." Richard Bertschinger, Acupuncturist and translator, Somerset, UK. "This book offers a timely and thorough examination of the experience and nature of qi, including a series of fascinating philosophical discussions with

a direct application to our patients. Required reading for acupuncture practitioners seeking to justify and clarify their clinical reasoning." Val Hopwood PhD FCSP, Physiotherapist, acupuncturist, researcher and educator; Course director, MSc Acupuncture, Coventry University, UK. "Over the last decade most books on Asian medicine paid tribute to the aura of evidence-based medicine – experience counted little, RCTs were convincing. This book, at last, returns to an old tradition of debate, opening up quite a few new horizons. Reading it, my striving for knowledge was married with enjoyment and happiness. This book made me happy!" Thomas Ots MD PhD, Medical acupuncturist specialising in psychiatry, Graz, Austria; Editor-in-Chief, *Deutsche Zeitschrift für Akupunktur*. "To simply review the chapter headings is to know the truly remarkable expanse of this book...a wonderful bridge between the mysteries of the East and the sciences of the West...well documented, well written, and enlarging both. Enlightening...nicely depicts outstanding advances in energy psychotherapeutics, thus ultimately helping to move forward the human condition." Maurie D Pressman MD, Emeritus Clinical Professor of Psychiatry, Temple University School of Medicine, Philadelphia, PA; Emeritus Chairman of Psychiatry, Albert Einstein Medical Center, Philadelphia PA; past President, International Society for the Study of Subtle Energies and Energy Medicine, Lafayette, CO, USA.

The book contains the latest results of the research on the foundations of Traditional Chinese Medicine (TCM), done by Professor Wallner from Vienna and a group of leading TCM specialists. The research on TCM does not deal with single medical concepts, but concentrates on its foundations, the structure and form of this medical science. It discusses the relation of TCM and Western Medicine, a concept of science, their peculiarities and differences, the problems of a thoughtless mixture. The book mainly presents five lectures by Professor Wallner about his latest research on the structure of TCM. Additionally, the book contains contributions from TCM specialists as Zhang Weibo, Lan Feng-Li, and Gunter Gunia."

Optimal eye health is just around the corner with this guide to treating common eye disorders with acupuncture, herbs, and other tenets of Chinese medicine For the past ten years, Andy Rosenfarb has successfully used acupuncture and Chinese medicine to treat a wide range of eye conditions. His treatments include moxibustion techniques, tuina (massage), microcurrent stimulation, Chinese herbs, and qigong exercises, along with "essential acupuncture" where essential oils are placed on acupuncture points. The culmination of his work—which includes a recent pioneering study involving metabolic testing—is this handbook for healing the kinds of conditions too often considered almost impossibly challenging or irreversible. The first half of *Healing Your Eyes with Chinese Medicine* explains Traditional Chinese Medicine and its perspective on the eyes, which is based on the idea that the eyes and the brain work in tandem, not isolation. The second half focuses on proven methods derived from Rosenfarb's practice, including nutritional, supplemental, and lifestyle adjustments. Individual chapters cover eye disorders such as glaucoma, macular degeneration, retinitis pigmentosa, and many more. This book is intended as a practical manual to

help readers understand their eyes and vision more comprehensively, and to learn new, affordable ways for retaining the precious gift of sight.

Although in the United States the scientific value of acupuncture is only now being clinically evaluated for the first time, needling is only one of a number of therapeutic disciplines which have proved effective in China for over two thousand years and which today provide common remedies for more than one quarter of the world's population. Why, asks Dr. Porkert, shouldn't medical men everywhere have access to the premises and results of this medical knowledge? In this book he presents a coherent and systematic account of Chinese theories--the system of correspondence that underlies all of Chinese medicine--using a new and precise Latin terminology (with English equivalents provided for most terms) that he devised over the past decade. The book is based directly and exclusively on Chinese sources, including recent Chinese secondary literature. Chapter 1 introduces the concepts that are the foundation of the system of correspondences--the polar combination yin-yang, which provides a basis for the analysis of all phenomena into complementary groups, and "wu-hsing," which Dr. Porkert calls the "Five Evolutive Phases," and which are used to resolve cyclic processes into five temporally and qualitatively distinct parts. In Chapter 2 he takes up concepts which relate the body to the cosmos under the title "Phase Energetics" "(yun-ch'i);" these define meteorological, climatic, and immunological factors in health and disease. Chapters 3 and 4 focus on systems of concepts concerned with the body itself. The author has named these systems orbisiconography, sinarteriology, and foraminology. Orbisiconography "(tsang-hsiang), " the "imagery of functional orbs," describes the relationships of the functional systems within the body. It is not, as Dr. Porkert points out, analogous to but the opposite of Western comparative anatomy. Sinarteriology, the study of energetic conduits "(ching-luo), " and foraminology, the study of sensitive points "(shu-hsueh), " indicate the functional relationships manifested at the body's surface as well as within it. The book's systematic description of these disciplines involved in acupuncture is a powerful antidote to basic misconceptions prevalent in earlier Western writing on the subject. This is Volume III in the MIT East Asian Science series, edited by Nathan Sivin.

THE PSYCHE IN CHINESE MEDICINE comprehensively discusses the treatment of mental-emotional disorders with both acupuncture and herbal medicine. Suitable for practitioners and students of Chinese medicine it discusses first the aetiology, pathology and diagnosis of mental disorders. It explores the nature of the Mind (Shen), Ethereal Soul (Hun), Corporeal Soul (Po), Intellect (Yi) and Will-Power (Zhi) and then presents the diagnosis and treatment of the most common psychological disorders with both acupuncture and Chinese herbs in detail. Specific chapters focus on the treatment of common conditions including depression, anxiety, insomnia, panic attacks, bipolar disorder and Attention Deficit Hyperactivity Disorder. Each

condition is illustrated with case histories from the author's 35 years-long practice. Comprehensive discussion of the nature of the Shen, Hun, Po, Yi and Zhi in Chinese medicine The first detailed description of the nature and functions of the Hun (Ethereal Soul) and how that relates to conditions such as depression, bipolar disorders and Attention Deficit Hyperactivity Disorder An entire chapter dedicated to the functions of acupuncture points in the treatment of mental-emotional disorders Case studies that offer realistic insights and understanding to the range of diagnostic and treatment choices the practitioner can make Attractive 2-colour page layout gives easy access and navigation around the text

The Fundamentals of Chinese Medicine is an international collaboration of Chinese medicine experts from both China and the west, and co-written by an experienced practitioner who has been teaching the subject in western schools. This book covers the theory of traditional Chinese medicine and discusses the topic in greater depth than any English language textbook available today. An abundance of classical references are also included here. The material in this text comprises course material for a professional course of training in TCM, which is also the basic material for studying and comprehension of other more advanced courses in TCM. The main contents include the physiological basis of essence-qi, yin-yang and the five phases, followed by the theories of essence, qi and blood, fluids, and spirit. Organ manifestation, channel and collateral theory, constitutional theory, etiology and patho-mechanism, and also principles of prevention and treatment are expounded upon. The knowledge in this textbook is approximately equal to that for students of TCM colleges in China, and coincides with the requirements in the Examination Syllabus for TCM Professional Practitioners Worldwide.

Discussion of Cold Damage (Shang Han Lun) and contemporary texts of ancient China form the bedrock of modern Chinese medicine practice, yet these classic texts contain many concepts that are either hard to understand or confusing. Based on over thirty years' medical practice, and study of the texts, this book explains the concepts involved so that the clinical applications of the ancient texts can be better understood and put into practice. The author looks at the larger context of ancient Chinese culture and philosophy in terms of theoretical knowledge, scholarly approach, and mindset in order to explain the basis for the medical texts. He also discusses the work of later Chinese medical scholars in elucidating the texts. He then goes on to look at more specific issues, such as the six conformations, zang-fu organ theory, the theory of qi and blood, the theory of qi transformation, and how these are understood in the ancient texts. He also discusses shao yang and tai yang theory; the element of time, and its place in understanding six conformations diseases. This remarkable work of scholarship will clarify many questions about the interpretation of the ancient texts for modern use, and will find a place on the bookshelf of every practitioner of Chinese medicine, as well as on those of scholars of Chinese medicine.

The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

The Practice of Chinese Medicine Simon and Schuster

Listen to Your Body shows how you can promote health and natural well-being by modifying everyday actions to improve the flow of qi (the universal principle of energy). Breathing, eating, drinking, resting, washing, and many other small but vital actions--if carried out in the right way--can result in profound changes in body function. To give readers an understanding of the body's own natural medicine, the authors provide a clear explanation of the foundations of Traditional Chinese Medicine (TCM) with reference to qi and its flow through the body's meridians, the balance of yin and yang, and the body's energy centers. Readers will learn how to "tune in" to the signals the body transmits to warn of impending health problems; numerous case histories illustrate how this highly developed information

system of the body works. Later chapters address the art of relaxation, bringing together the TCM approach to health with recent scientific studies. Finally the authors describe in detail how to apply the natural medicine of the body to daily life. They discuss illness prevention and provide specific guidance for the management of a range of health disorders. Exercises and simple routines are given, together with the basis for their therapeutic effect.
