DIANA LNG Transportation Storage Gas Handling Liquefied natural gas pipelines. Liquefied natural gas flows efficiently through pipelines so is a preferred method of transporting natural gas. Most LNG pipeline infrastructure takes the LNG between liquefaction facilities and storage facilities, from storage facilities to tankers, and from tankers to re-gasification facilities. LNG is much denser than compressed natural gas (CNG). This means that much higher amounts of

gas are able to be transported for the same volume flow. Transportation of liquefied natural gas - Energy Education File Type PDF Lng Transportation Storage Gas Handling Equipment Systems 8th Annual LNG Transport, Handling & Storage Forum 2018 In order to facilitate transport, natural gas is cooled down to approximately $-163\text{ }^{\circ}\text{C}$ ($-261\text{ }^{\circ}\text{F}$) at atmospheric pressure, at which point the gas Lng Transportation Storage Gas Handling Equipment Systems Lng
