## EATON TAPIA

*One-Hour Mysteries* Routledge

As insightful and wise today as it was when originally published in 1954, Jacques Ellul's *The Technological Society* has become a classic in its field, laying the groundwork for all other studies of technology and society that have followed. Ellul offers a penetrating analysis of our technological civilization, showing how technology—which began innocuously enough as a servant of humankind—threatens to overthrow humanity itself in its ongoing creation of an environment that meets its own ends. No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book. "A magnificent book . . . He goes through one human activity after another and shows how it has been technicized, rendered efficient, and diminished in the process."—Harper's "One of the most important books of the second half of the twentieth-century. In it, Jacques Ellul convincingly demonstrates that technology, which we continue to conceptualize as the servant of man, will overthrow everything that prevents the internal logic of its development, including humanity itself—unless we take necessary steps to move human society out of the environment that 'technique' is creating to meet its own needs."—The Nation "A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception, subverting and suppressing these values to produce at last a monolithic world culture in which all non-technological difference and variety are mere appearance."—Los Angeles Free Press

*Lollipop Logic* Routledge

This safari will send students on an expedition that will result in hours of good thinking and unbridled enthusiasm. As enthusiasm soars, so do the levels of thinking skills engaged. Students love these deductive logic puzzles so much that they beg to do them, little realizing that they are building important reading comprehension and thinking skills. Teachers love these puzzles because of their ease of use in multicurricular parallels and their effortlessness in fitting into pullout programs of limited duration. Each motivating puzzle includes an introduction with student-related topics, clues, a grid, and an illustration. The goal in *Logic Safari* is to hunt down the clues, sort, analyze, and combine them into the correct solution. Each book represents an ever-increasing challenge to students while scenarios remain fresh, evoking renewed eagerness. The size of the grids is an indication of difficulty. This is the first book in a three-part series of deductive logic puzzles. For more advanced puzzles, see *Logic Safari Book 2* and *Logic Safari Book 3*. Grades 2-3

*Word Beggles* Paw Prints

"Lollipop Logic employs visual and pictorial clues to introduce and reinforce high-powered thinking for pre-readers. Seven different thinking skills—relationships, analogies, sequences, deduction, inference, pattern decoding, and critical analysis—are presented in a format designed to appeal to gifted young learners. This straightforward, one-of-kind tool gives wings to pre-readers and non-readers who are ready for a challenge but don't yet have the reading skills for more traditional critical thinking activities. Now with full color illustrations, this beloved classic has been fully updated with refreshed activities, images, and text to help young learners continue to soar into the stratosphere of thinking skills far beyond their reading levels!"—

*The Technological Society* Routledge

Puzzles designed to strengthen students' logical deductive thinking skills.

*Thinking Through Analogies* Winslow Press

Nearly everyone must at some time face a standardized test. This guide eases the process by helping readers improve reasoning, critical thinking, judgment, and decision-making skills, and prepare for exams. Like most standardized tests, it features 501 multiple-choice questions along with complete answers. It begins with basic number and letter series questions, and moves on to

verbal-classification, artificial-language, and matching-definition items. The last set contains logic problems, logic games, and logical reasoning questions. 501 Challenging Logic and Reasoning Problems can mean the difference between moving ahead or staying behind — in school or at work.

**Christian Home Educators' Curriculum Manual** The Experiment

Are you looking for a motivating way to combine problem solving, visual discrimination, and language? *Word Beggles* is just what you need. A word boggler is a puzzle, a brain teaser, and a lesson in language, all rolled into one. These clever visual puzzles use words and phrases to build flexible thinking and word literacy. Each word boggler is a word or phrase that has been written so that its meaning is conveyed via the position, number, or size of the words and letters. Some of the puzzles are words while some are familiar idioms and clichés. Thus, this book brings an opportunity to develop vocabulary and knowledge of often-used phrases in the form of motivating brainteasers. Each page features six of these visual puzzles. Students analyze the way the words are written (size, position, and direction) to solve each boggler and match it with its definition. A way to further reinforce the understanding of each phrase is to have students use the phrases in a written sentence. You can use these puzzles in a variety of ways, including: putting them on the overhead for a quick daily thinking challenge, using them as starting points for daily writing exercises, using an entire page for a weekly challenge, forming groups to work together on solving the puzzles, using them in a learning center, and having students make up their own puzzles. Bring *Words Beggles* into your classroom today. The result of using these word puzzles is lots of fun, lots of challenge, and increased knowledge of the meaning of common idioms and words. For more word puzzles, see *The World's Greatest Brain Beggles* and *Brain Twisters!*

*Exceptional Child Education Resources* Routledge

An analogy is a comparison that points out the similarities between things that are different in all other respects. Teaching students how to solve analogies not only develops their logical thinking, but also builds visual awareness and verbal proficiency. The seven different types of visual analogies and 14 different verbal analogies in *Analogies for Beginners* are perfect for beginning lessons in logical reasoning, flexible thinking, and vocabulary. Each page gives students an example of the type of analogy that is being introduced and then provides 7 (visual) or 10 (verbal) problems for them to solve. This combination of verbal and visual formats is an ideal way to introduce logical thinking in primary grades. Whether you have time for one analogy a day, or a worksheet a week, students will benefit in many ways when analogies are part of your curriculum. The use of visual analogies is beneficial for developing visual analysis even for older students, but especially useful for nonreaders and students with developing English skills. The verbal analogies provide students with exercises that require them to use word comprehension and also to examine various characteristics, uses, and relationships.

"A flawless compendium of flaws." —Alice Roberts, PhD, anatomist, writer, and presenter of *The Incredible Human Journey* The antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote *An Illustrated Book of Bad Arguments!* This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, à la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn't believe that gas emissions harm the planet because, if that were true, he wouldn't like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.

El-Hi Textbooks & Serials in Print, 2005 PRUFROCK PRESS INC.

Imaginative logic puzzles are the pinnacle of this classic series designed to sharpen deductive reasoning skills and strengthen the ability to sort through information by formulating connections. Created with the classroom teacher in mind, these puzzles are both intriguing and easy to fit into lesson plans for the gifted and talented, as well as many main course curriculums. Designed for teachers frustrated with complicated logic exercises that are beyond the scope of one class period, the Connections puzzles are formatted for success within 50-minute pullout programs. Each puzzle includes an introduction, clues, grid, and an illustration. Many educators have found Connections the best exercise to introduce deductive reasoning skills while enhancing enthusiasm. Exercises are simple to use and gradually present ever-increasing challenges.

**Talent Scout** R. R. Bowker

One-Hour Mysteries offers five motivating mysteries that your students can solve using clues and logical reasoning. Your students will become crime scene investigators, analyzing clues found at a crime scene and applying forensic techniques in their analysis. Each mystery includes a complete set of teacher instructions and blackline masters that may be photocopied for classroom use. This exciting book features the following mysteries: Mystery at the Mall, The Coaster Caper, The Case of Santa's Blackmail, The Case of the Missing Tiara, and A Hollywood Crime. What better way to motivate critical thinking than with a whodunit? Skills include deductive reasoning, inferring, taking notes, organizing data, and analyzing evidence. Get ready for real thinking combined with cloak-and-dagger fun! If you like this book, you'll love its follow-up, More One-Hour Mysteries. Grades 4-8

**Orbiting with Logic** Dandy Lion Publications

Imaginative logic puzzles are the pinnacle of this classic series designed to sharpen deductive reasoning skills and strengthen the ability to sort through information by formulating connections. Created with the classroom teacher in mind, these puzzles are both intriguing and easy to fit into lesson plans for the gifted and talented, as well as many main course curriculums. Designed for teachers frustrated with complicated logic exercises that are beyond the scope of one class period, the Connections puzzles are formatted for success within 50-minute pullout programs. Each puzzle includes an introduction, clues, grid, and an illustration. Many educators have found Connections the best exercise to introduce deductive reasoning skills while enhancing enthusiasm. Exercises are simple to use and gradually present ever-increasing challenges. The thinking skills introduced dovetail easily into other aspects of the curriculum. Capture students' attention and challenge their intellectual talents with this first-rate series.

**501 Challenging Logic and Reasoning Problems** Prufrock Pr

This classic book will excite students' imaginations while enriching skills in logical thinking. Logic Countdown problems are easy to incorporate into lesson plans and are formatted to enhance the fullest spectrum of curriculum areas while sharpening thinking skills. Challenging and instructional, these thought-provoking books present sequential exercises in logical reasoning that include relationships, analogies, syllogisms, sequences, deductive reasoning, inference, truth-values, and logical notation. Simple grids coupled with intriguing problems evoke enthusiasm and inspire students to higher and higher levels of thinking. Each book in this series builds on concepts presented previously in the series to offer a comprehensive logic adventure for young thinkers. The skills students build by using this book are applicable to several areas of the curriculum. Academic skills used for reading, math, writing, and science all depend on the ability to perceive and define relationships and to form inferences. But, beyond the academic world, students will find logical thinking an integral part of everyday life. This is the first in a three-book series designed to sharpen children's logical thinking skills. Once students master the skills presented in this book, they will be ready for new challenges in Logic Liftoff and Orbiting with Logic.

**Primarily Logic** Routledge

One cold rainy day when my father was a little boy, he met an old alley cat on his street. The cat was very drippy and uncomfortable so my father said, "Wouldn't you like to come home with me?" This surprised the cat—she had never before met anyone who cared about old alley cats—but she said, "I'd be very much obliged if I could sit by a warm furnace, and perhaps have a saucer of milk."

**Lollipop Logic** Crystal Springs Books

Puzzles designed to strengthen students' logical deductive thinking skills.

**Logic Safari** Vintage

This classic book will excite students' imaginations while enriching skills in logical thinking. Orbiting with Logic problems are easy to incorporate into lesson plans and are formatted to enhance the fullest spectrum of curriculum areas while sharpening thinking skills. Challenging and instructional, these thought-provoking books present sequential exercises in logical reasoning that include relationships, analogies, syllogisms, sequences, deductive reasoning, inference, truth-values, and logical notation. Simple grids coupled with intriguing problems evoke enthusiasm and inspire

students to higher and higher levels of thinking. Each book in this series builds on concepts presented previously in the series to offer a comprehensive logic adventure for young thinkers. The skills students build by using this book are applicable to several areas of the curriculum. Academic skills used in reading, math, writing, and science all depend on the ability to perceive and define relationships, sequence events, and form inferences. But, beyond the academic world students will find logical thinking an integral part of everyday life.

**Subject Guide to Children's Books in Print** Macmillan

Creative Problem Solving (CPS) is a process that allows people to apply both creative and critical thinking to find solutions to everyday problems. It is a way to enhance creative behavior and also a systematic way to organize information and ideas in order to solve problems. The overall goal of CPS training is to improve creative behavior and problem-solving behavior. The skills involved are: ability to select relevant information ability to summarize information ability to analyze social situations, ability to think creatively to generate possible solutions, ability to evaluate options based on given criteria, ability to plan activities to accomplish a goal, and ability to make inferences. Primarily Problem Solving allows you to give your younger students a head start on problem solving. This book presents creative problem solving in a step-by-step manner young children can understand and enjoy. Use the CPS process to solve the problems of the Three Little Pigs, Rapunzel, and the Frog Prince, as well as more common family problems. Each problem includes illustrated worksheets to take students through each step of the problem-solving process. Teaching notes give instructors additional ideas for using creative problem-solving techniques in the classroom. Fun problems and step-by-step guides will take students successfully from the fuzzy beginning to an effective end. The end result is confidence in being able to think through a solution, rather than just latching on to the most obvious solution. Use these exercises as a part of your thinking skills class or creativity training, as supplementary reading assignments, or as a technique to solve conflicts in the classroom. Expand your knowledge of CPS even more with Primarily Creativity. Grades 2-4

**No Logo** Routledge

Based on Gardner's multiple intelligences, this book is packed with ideas for developing students' varied talents. This is an easy way to nurture all intelligences and provides opportunities for each student to work in a way that is most appropriate to his or her abilities. Grades 4-6

**Logic Safari, 3** Logic Safari Puzzles designed to strengthen students' logical deductive thinking skills. Primarily Logic

This classic book will excite students' imaginations while enriching skills in logical thinking. Logic Liftoff problems are easy to incorporate into lesson plans and are formatted to enhance the fullest spectrum of curriculum areas while sharpening thinking skills. Challenging and instructional, these thought-provoking books present sequential exercises in logical reasoning that include relationships, analogies, syllogisms, sequences, deductive reasoning, inference, truth-values, and logical notation. Simple grids coupled with intriguing problems evoke enthusiasm and inspire students to higher and higher levels of thinking. Each book in this series builds on concepts presented previously in the series to offer a comprehensive logic adventure for young thinkers. The skills students build by using this book are applicable to several areas of the curriculum. Academic skills used in reading, math, writing, and science all depend on the ability to perceive and define relationships, sequence events, and form inferences. But, beyond the academic world, students will find logical thinking an integral part of everyday life. This is the second in a three-book series designed to sharpen children's logical thinking skills. Once students have mastered Logic Countdown they are ready to meet new challenges in Logic Liftoff and Orbiting with Logic.

**Dr. DooRiddles B2** Courier Corporation

It's never too early to start building thinking skills—skills that will spill over into other areas of the curriculum and into real life. Primarily Logic consists of a series of units designed to introduce logical thinking to young students. It is an excellent, easy-to-use starting point for teaching well-established forms of logical thinking. Each skill is introduced with examples, and then worksheets give students an opportunity to practice the skill. Group lessons and worksheets provide practice in: finding relationships, analogies, thinking logically using "all" and "none" statements, syllogisms, and deductive reasoning using logic puzzles. Logical thinking is both enjoyable and challenging for students as they build a sound foundation for further instruction in critical thinking. Suggestions for related activities are included in the Instructions for Teachers section. For easier logic activities for younger students, try Lollipop Logic. Grades 2-4

**Instructor** Routledge

Designed to present critical thinking skills to young students who may not have mastered reading skills. Seven different thinking skills--relationships, analogies, sequences, deduction, inference, pattern decoding, and critical analysis--are presented in a format designed to appeal to the prereader.
