JOHN FULLER

India's Maritime Strategy UN

This book is the collective effort of participants from Dejusticia's annual Global Action-Research Workshop for Young Human Rights Advocates. The talented writers featured here are graduates from previous workshops who came together again in 2018 to explore the intersection between research and activism and what it holds for the future of human rights. The authors in this book question traditional methods and explore new ways and visions of advancing human rights in the troubled context in which we live today. Do the struggles of small-scale miners in Ghana, the use of strategic litigation in Lebanon, and the recognition of the rights of nature in India represent evidence for hope? Or is the opposite true, and, as shown in the chapters on martial law in the Philippines, the treatment of wastewater in Argentina, and in the internal conflict in Yemen, human rights have failed to deliver on their promises? Whatever the answer, *Reimagining the Future of Human Rights* invites us to reflect on the work of human rights in different contexts and the challenges that activists face, but also the progress they have made. The chapters in this book offer a snapshot of the current state of human rights that can help guide our work as activists and researchers.

Gas hydrate appearance accumulation, exploration and exploitation in continental margins - volume 2 Seven Stories Press

The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take

place, will alleviate their impact.

In spite of recent progress in the harmonization of terminology and processes affecting work on the clinical safety of medicines consensus is needed on standards for many difficult aspects of day-to-day pharmacovigilance that continue to pose problems for both the pharmaceutical industry and drug regulators. The CIOMS V Working Group has generated proposals for pragmatic approaches to dealing with such issues as: classification and handling of individual safety case reports from a variety of sources (spontaneous consumer reports solicited reports literature the Internet observational studies and secondary data bases disease and other registries regulatory ADR databases and licensor-licensee interactions); new approaches to case management and regulatory reporting practices (proper clinical evaluation of cases incidental vs other events patient and reporter identifiability seriousness criteria expectedness criteria case follow-up criteria and the role and structure of case narratives); improvements and efficiencies in the format content and reporting of periodic safety update reports (PSURs) (including results of an industry survey on PSUR workloads and practices; proposals for high case volume and long time-period reports simplification of certain PSURs summary bridging reports addendum reports license renewal reports for EU and Japan dealing with old products and other technical details); determination and use of population exposure (denominator) data (sources of data and a guide to analytical approaches for a variety of circumstances). The Group has also taken stock of the current state of expedited and periodic clinical safety reporting requirements around the world with summary data on regulations from more than 60 countries. Recommendations are made for enhancing the harmonization steps already taken as a result of previous CIOMS publications and the ICH process. In addition to dealing with unfinished and unresolved issues from previous

CIOMS initiatives the report covers many emerging topics such as those involving new technologies. Its 20 Appendices provide a wealth of detailed explanations and reference information. It is the most comprehensive and recent treatment of difficult pharmacovigilance issues affecting the working practices and systems of drug safety and other pharmaceutical professionals.
World Report 2019 Routledge

With over 80 per cent of global trade by volume and more than 70 per cent of its value being carried on board ships and handled by seaports worldwide, the importance of maritime transport for trade and development cannot be overemphasized. The 2017 Review of Maritime Transport presents and discusses key developments in the world economy and international trade and related impacts on shipping demand and supply, freight and charter markets, as well as seaports and the regulatory and legal framework. In addition to relevant developments in 2016 and the first half of 2017, this year's edition of the Review also features a special chapter on maritime transport connectivity, reflecting the prominence of physical and electronic connectivity as a priority area in the trade and development policy agenda.

World Economic Outlook, April 2017 Seven Stories Press

The first book by a former Indian naval intelligence officer on Sino-India relations, *India's Maritime Strategy* provides a unique insight into the Indian Navy, tracing its post-independence growth and discussing its transformation and future in the 21st century. In the context of the rise of China's maritime power in the Indian Ocean, this book provides a nuanced view of the extent and scope of India's maritime reach and the effect of this on Sino-Indian competition. Challenging the view that by developing a favourable environment alone, India could seek to maintain its balance of power with China, it is argued that despite durable bilateral security ties with most regional states, India's maritime aspirations to be the primary net security provider for the region are unsustainable in the long term. This book presents a comprehensive coverage of India's bilateral maritime security engagements with all the Indian Ocean regional states, as well as the US, France, UK and Russia. As such, it will be useful to students and scholars of Indian and South Asian politics,

international relations and maritime security.

Cracking the code Currency

The important and rapidly emerging new field known as 'cyber threat intelligence' explores the paradigm that defenders of computer networks gain a better understanding of their adversaries by understanding what assets they have available for an attack. In this book, a team of experts examines a new type of cyber threat intelligence from the heart of the malicious hacking underworld - the dark web. These highly secure sites have allowed anonymous communities of malicious hackers to exchange ideas and techniques, and to buy/sell malware and exploits. Aimed at both cybersecurity practitioners and researchers, this book represents a first step toward a better understanding of malicious hacking communities on the dark web and what to do about them. The authors examine real-world darkweb data through a combination of human and automated techniques to gain insight into these communities, describing both methodology and results.

Darkweb Cyber Threat Intelligence Mining Routledge

This report aims to 'crack the code' by deciphering the factors that hinder and facilitate girls' and women's participation, achievement and continuation in science, technology, engineering and mathematics (STEM) education and, in particular, what the education sector can do to promote girls' and women's interest in and engagement with STEM education and ultimately STEM careers.

Oman Oil and Gas Exploration Laws, Regulation Handbook - Strategic Information, Laws and Regulations Frontiers Media SA
Oil, Gas, and Mining: A Sourcebook for Understanding the Extractive Industries provides developing countries with a technical understanding and practical options around oil, gas, and mining sector development issues. A central premise of the Sourcebook is that good technical knowledge can better inform political, economic, and social choices with respect to sector development and the related risks and opportunities. The guidance provided by the Sourcebook assumes a broad set of overarching principles, all centered on good governance and directed at achieving positive and broadly based sustainable development outcomes. This Sourcebook is rich in presenting options to challenges, on the understanding that contexts and needs vary, and that there is much to be gained from

appreciating the lessons learned from a broad set of experiences.

Understanding Well-being Data Frontiers Media SA

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Concrete for the Modern Age Developments in materials and processes World Bank Publications

"Minerals and mining are key to the world economy. The mining and processing of minerals are major sources of income and employment in some states. Minerals are used to make goods, materials and energy which are essential to people and economies worldwide.

Global Waves of Debt Springer

As China's international political role grows, its relations with states outside of its traditional sphere of interests is evolving. This is certainly the case of the Arab Gulf monarchies of Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and the United Arab Emirates, which together comprise the Gulf Cooperation Council (GCC). China's levels of interdependence with these states has increased dramatically in recent years, spanning a wide range of interests. What motivating factors explain the Chinese leadership's decision to forge closer ties to the GCC? Why have GCC leaders developed closer ties to China, and what kind of role can China be expected to play in the region as levels of interdependence intensify? This

book uses neoclassical realism to analyse the evolution of Sino-GCC relations. Examining the pressures that shaped China's policy toward the Arab Gulf monarchies, it demonstrates that systemic considerations have been predominant since 1949, yet domestic political considerations were also always an important consideration. Relations are examined across diplomatic and political interactions, trade and investment, infrastructure and construction projects, people-to-people exchanges, and military and security cooperation. This book will appeal to scholars in the fields of International Relations and International Political Economy, as well as area specialists on China, the Persian Gulf, the Arab Gulf Monarchies, and those working on foreign policy issues.

Review of Maritime Transport 2017 Cambridge University Press

'Following the data' is a now-familiar phrase in Covid-19 policy communications. Well-being data are pivotal in decisions that affect our life chances, livelihoods and quality of life. They are increasingly valuable to companies with their eyes on profit, organisations looking to make a social impact, and governments focussed on societal problems. This book follows well-being data back centuries, showing they have long been used to track the health and wealth of society. It questions assumptions that have underpinned over 200 years of social science, statistical and policy work. Understanding Well-being Data is a readable, introductory book with real-life examples. Understanding the contexts of data and decision-making are critical for policy, practice and research that aims to do good, or at least avoid harm. Through its comprehensive survey and critical lens, this book provides tools to promote better understanding of the power and potential of well-being data for society, and the limits of their application.

Iranian Naval Forces: A Tale of Two Navies UNESCO Publishing

The human rights records of more than ninety countries and territories are put into perspective in Human Rights Watch's signature yearly report. Reflecting extensive investigative work undertaken in 2016 by Human Rights Watch staff, in close partnership with domestic human rights activists, the annual World Report is an invaluable resource for journalists, diplomats, and citizens, and is a must-read for anyone interested in the fight to protect human rights in every corner of the globe.

22nd European Conference on e-Learning Springer Nature

Global economic activity is picking up with a long-awaited cyclical recovery in investment, manufacturing, and trade, according to Chapter 1 of this World Economic Outlook. World growth is expected to rise from 3.1 percent in 2016 to 3.5 percent in 2017 and 3.6 percent in 2018. Stronger activity, expectations of more robust global demand, reduced deflationary pressures, and optimistic financial markets are all upside developments. But structural impediments to a stronger recovery and a balance of risks that remains tilted to the downside, especially over the medium term, remain important challenges. Chapter 2 examines how changes in external conditions may affect the pace of income convergence between advanced and emerging market and developing economies. Chapter 3 looks at the declining share of income that goes to labor, including the root causes and how the trend affects inequality. Overall, this report stresses the need for credible strategies in advanced economies and in those whose markets are emerging and developing to tackle a number of common challenges in an integrated global economy.

Nursing Diagnoses 2015-17 WIT Press

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is

just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

The aim of this report is to present an overview of the 17 Goals using data currently available to highlight the most significant gaps and challenges.

Youth and violent extremism on social media IGI Global

This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.--Publisher's description.

Recent Applications of Financial Risk Modelling and Portfolio Management Springer Nature

Based on the concept of corporate social responsibility, this book analyses modern approaches adopted by mining companies that could minimise negative impacts of mining and enhance positive benefits to corporate stakeholders. Using a case study of two mining sectors (gold and diamond mining) the book evaluates policies and practices of mining companies within four key areas of corporate social responsibility: environmental protection, health and safety, employee relations and community development. Also included is an assessment of three models for community development that are developed within the mining industries: company-led approach, establishment of corporate foundation and tri-sector partnership. The study analyses management of corporate social responsibility issues with specific reference to mining in the Russian Federation and provides a comparison with global mining companies.
