Motivation in Organizational Behavior provides an update of the critical analysis of the scientific literature on this topic, and provides a highly integrated treatment of leading theories, including their historical roots and progression over the years. A heavy emphasis is placed on the notion that behavior in the workplace is determined by a mix of factors, many of which are not treated in texts on work motivation (such as frustration and violence, power, love, and sex). Examples from current and recent media events are numerous, and intended to illustrate concepts and issues related to work motivation, emotion, attitudes, and behavior.

How Banks Innovate Routledge

"Banks are no longer the employer of choice for business students. This is critical at a time when talent is most needed to fend off disruptors. With innovative, ethical talent becoming more attracted to other industries such as software and computer services, it will be difficult to compete and to transform culturally. Banks are losing out to fast-rising tech companies, and attracting conservatives instead of innovators. Examining survey results from 211,000 business students, the report looks at how to turn things around. In this report, Deloitte outlines the key talent issues facing banks, and provides suggestions as to how banks can improve both their talent propositions and their internal organization in order to tackle the challenges ahead."--Executive summary.

Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are either offshored or given to robots. A better world of for jobs cannot be warranted - a lot will be contingent on devising the right policies and institutes in place.
