For centuries, the importance of financial
accounting has been well understood.
Essential to building businesses, states,

and even empires, accounting has also
helped leaders measure their power and
craft their policies. When practiced
poorly or neglected, accounting has
contributed to cycles of destruction, as
the 2008 financial crisis has made all too
clear. In *The Reckoning*, award-winning
historian Jacob Soll shows how the use
and misuse of financial bookkeeping has
determined the fate of entire societies.

In the right hands, accounting has created social stability, good governance, and economic prosperity. In the wrong hands, good accounting practices have often been subverted, with disastrous results ranging from financial losses and debt to complete economic collapse. From the Medici bankers to the director of finances under Louis XVI, from the Industrial Revolution to the Stock Market Crash of 1929 and the Great Recession, *The Reckoning* demonstrates that civilizations are only as strong as their bookkeepers.

 If Amazon can't win in China, can anyone? When Amazon CEO Jeff Bezos visited China in 2007, he expected that one day soon China would be a double-digit percentage of Amazon's sales. Yet, by 2019, Amazon, the most powerful and successful ecommerce company in the world, had quit China. In *Winning in China: 8 Stories of Success and Failure in the World's Largest Economy*, Wharton experts Lele Sang and Karl Ulrich explore the success and failure of several well-known companies, including Hyundai, LinkedIn, Sequoia Capital, and InMobi, as more and more businesses look to reap profits from the demand of 1.4 billion people. Sang, Global Fellow at the Wharton School of the University of Pennsylvania, and Ulrich, Vice Dean of

Entrepreneurship and Innovation at the Wharton School, answer four critical questions: Which factors explain the success (or failure) of foreign companies entering China? What challenges and pitfalls can a company entering China expect to encounter? How can a prospective entrant realistically assess its chances? Which managerial decisions are critical, and which approaches are most effective? Sang and Ulrich answer these questions by examining the stories of eight well-known and respected companies that have entered China. They study: How Norwegian Cruise Line's entry into China displays how cultural differences can boost or sink different companies; How Intel, one of the oldest, most respected firms in Silicon Valley, thrived in a country that seems to favor

agile upstarts; How Zegna, the Italian luxury brand, has emerged as another surprising success story and how it plans to navigate new headwinds from the COVID-19 pandemic. Through these engaging and illuminating stories, Sang and Ulrich offer a framework and path for organizations looking for a way to successfully enter the world's largest economy. History can be a teacher, and China, a country with 3,500 years of written history, has much to teach.

There's a reason Alison Green has been called "the Dear Abby of the work world." Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then

take credit for it • you accidentally trash-talk someone in an email then hit "reply all" • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for Ask a Manager "A must-read for anyone who works . . . relationships in all areas of readers' lives. Goodwill, sometimes purchased but often more significantly internally generated, is the major constituent of the value of many listed companies. Accounting aims to provide users of financial statements with useful information, and more than fifty current International Financial Reporting Standards prescribe accounting disclosure requirements in minute detail. However, these Standards dismiss internally generated goodwill with a single brief provision that it is not to be brought to account at all. The impairment regime now laid down for dealing with purchased goodwill contains severe flaws, while previous methods

have also been found to be unsatisfactory. This book traces the history of the goodwill accounting controversy in detail and demonstrates that it has been a prime example of an issue 'conceived in a way that it is in principle unsolvable'. It explores the problem of recognising the importance of goodwill as a whole and finding a way of presenting meaningful information regarding it in the context of the financial statements. The author's proposed solution builds upon research undertaken and uses a Market Capitalization Statement, based on a modification of nineteenth century 'double accounting' in a modern context. Examples show that the proposed Market Capitalization Statement has the potential to provide significant

information not currently available from conventional financial statements, which in turn are freed to present clearer information.
