Breakthroughs in science and technology increasingly happen outside of firms in informal interorganizational communities of innovators. The effort of a group on a specific topic across firms,

expertise, and geography can function as an emergent organizational form, capable of great productivity. Using data from computer science, basic research, and management strategy to identify and study these intense clusters of innovators, or "knowledge communities," this book illuminates the new organizational logics that govern such collective success.

The Complete Book of Colleges 2021

Springer
The drug trade. Crime. Terrorism. Cyber threats. In the Caribbean, these cross-border Problems Without Passports (PWPs) have shaken the very foundation of nation states. Blending case studies with regional analysis, Ivelaw Lloyd Griffith examines the regionwide impact of PWPs and the complex security and

sovereignty issues in play. The interaction of local and global forces within PWPs undermines the governments' basic goal of protecting their people against military threats, subversion, and the erosion of political, economic, and social values. Seeking solutions to these multidimensional threats requires addressing both traditional and non-traditional security and sovereignty issues. Griffith focuses on clashes between PWPs and the state from warring drug gangs in Jamaica, to Trinidad and Tobago's one-time status as a center for terrorism-related activities, to the political resurgence of drug trafficker Desi Bouterse in Suriname, and the growing cyber

threats across the region. Informed and up to date, *Challenged Sovereignty* explains the effects of today's globalized problems on the contemporary Caribbean.

This book presents a collection of meta-studies, reviews, and scientometric analyses that together reveal a fresh picture about the past, present, and future of computing education research

(CER) as a field of science. The book begins with three chapters that discuss and summarise meta-research about the foundations of CER, its disciplinary identity, and use of research methodologies and theories. Based on this, the book proceeds with several scientometric analyses, which explore authors and their collaboration networks, dissemination practices, international collaboration, and shifts in research focus over the years.

Analyses of dissemination are deepened in two chapters that focus on some of the most influential publication venues of CER. The book also contains a series of country-, or region-level analyses,

including chapters that focus on the evolution of CER in the Baltic Region, Finland, Australasia, Israel, and in the UK & Ireland. Two chapters present case studies of influential CER initiatives in Sweden and Namibia. This book also includes chapters that focus on CER conducted at school level, and cover crucially important issues such as technology ethics, algorithmic bias, and their implications for CER. In all, this book contributes to building an understanding of the past, present and future of CER. This book also contributes new practical guidelines, highlights topical areas of research, shows who to connect with, where to publish, and gives

ideas of innovative research niches. The book takes a unique methodological approach by presenting a combination of meta-studies, scientometric analyses of publication metadata, and large-scale studies about the evolution of CER in different geographical regions. This book is intended for educational practitioners, researchers, students, and anyone interested in CER. This book was written in collaboration with some of the leading experts of the field.

The emergence of new technologies and business models such as data analytics, online platforms, and

artificial intelligence has shaken the economy and society at their foundations. Recently, it has become apparent that public authorities must take a pro-active role to define the rules of the newly emerged markets before potential issues and concerns cement. How rules are currently written determines who will exert a stronger influence on the economy and society in the coming years. This is key reason why digital policymakers are currently exposed to tremendous pressure by stakeholders. This book takes a journey through all the main areas in the digital economy that beg for policy action. Readers may learn about the general features of a

digital economy and the EU long term strategic plans to govern it. They may learn about telecom markets, the data economy, the digitization of the public sector, cybersecurity, the platform economy, liability for online content, e-commerce, the sharing economy, the impact of technology on labour markets, digital inequality, disinformation, and artificial intelligence. This book provides students with the background knowledge and analytical tools necessary to understand, analyse, and assess the impact of EU digital policies on the European economy and society. The approach is both theoretical and

applied. The main goal is to prepare students to give informed and economically sound advice to an EU policymaker for digital affairs.
