Understanding and Identifying Multicollinearity in Regression using SPSS ~~Estudi 1, Maxime Alphonse, 4. Trè~~
 vifVif Variance inflation factor (VIF) is used to detect the severity of multicollinearity in the ordinary least square (OLS) regression analysis. Multicollinearity inflates the variance and type II error. It makes the coefficient of a variable consistent but unreliable. VIF measures the number of inflated variances caused by multicollinearity. Variance Inflation Factor (VIF) - Overview, Formula, Uses In statistics, the variance inflation factor (VIF) is the quotient of the variance in a model with multiple terms by the variance of a model with one term alone. It quantifies the severity of multicollinearity in an ordinary least

squares regression analysis. It provides an index that measures how much the variance (the square of the estimate's standard deviation) of an estimated regression ... Variance inflation factor - Wikipedia Variance inflation factor (VIF) is a measure of the amount of multicollinearity in a set of multiple regression variables. Mathematically, the VIF for a regression model variable is equal to the...
