COHEN DICKSON

The Journal of the National Education Association Princeton Review

Excerpt from Home Geography and World Relations The purpose has been to show the relation of the individual pupil to all parts of his own country, and thereby to emphasize the interdependence of people commercially and industrially. Any treatment of Home Geography must be general in order to make it true for all children in all localities. In the suggestive questions, however, an effort has been made to localize the Home Geography for the individual pupil. He is asked to study his own environment and to explain its geography by the universal facts presented in the text. This handbook provides an overview of developments in the youth mobility and migration research

field, with specific emphasis on movement for education, work and training purposes, encompassing exchanges sponsored by institutions, governments and international agencies, and free movement. The collection features over 30 theoretically and empirically-based discussions of the meaning and key aspects of various forms of mobility as practiced in contemporary societies, and concludes with an exploration of the costs and benefits of moving abroad to individuals and societies at a time when the viability of free circulation is being called into question. The geographical scope of the book covers Europe, Asia, Australia and the Americas, and takes into account socio-economic and regional inequalities, as well as recent developments such as the refugee crisis, Brexit and the Covid-19 pandemic. The book integrates the fields of youth mobility and migration studies, creating opportunities for the establishment of a new paradigm for understanding the spatial circulation of youth and young adults in the twenty-first century. [Food and Nutrition Information and Educational Materials Center catalog](#) Springer Nature Excerpt from Introductory Geography Since Part I of the present volume is a radical innovation, it perhaps needs an explanatory foreword. Necessity Of Home Geography. - The final basis for all

study of geography is actual experience. Yet text-books on that subject rarely treat Home Geography at all, and those that do, devote but few pages to it. This subject should, we think, receive far more careful attention. Necessity Of Other Basal Notions. - Home experience alone, however, cannot offer a complete basis for the later study of geography, because no one locality presents all the features required. From this it happens that the best books have contained some definitions and illustrations, as of mountain, river, valley, harbor, and factory, and have planned to build the later text with the ideas these gave as a foundation. Such conceptions are certainly necessary in the early part of geography; but mere definitions fail to produce vivid, accurate pictures. The average pupil who has pursued geography for a year has little notion of the great importance of soil, of what a mountain or a river really is, of the value of good trade routes, and why a vessel cannot find a harbor wherever it will cast anchor along the coast. Yet such ideas are the proper basis for the study of geography in the higher grades. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. The Complete Geography. Mathematical, Physical, Political Elsevier

Excerpt from A Home Geography of New York City Wholesome pride in one's home, one's immediate surroundings, and one's own city engenders not only .a love for this circumscribed area, but opens the heart for the larger love, - the love of country and of humanity. Home geography emphasizes man's intimate connection with surrounding geographical features and his dependence upon them: it shows how man utilizes the opportunities offered by nature to establish relationships with her; it dwells upon man's expediency in turning to profitable account the resources of his environment; and it also arouses in the learner a feeling of reverence for those responsible for the great changes wrought, and for the institutions that helped to effect those changes. Home geography does not restrict itself to present conditions alone, it concerns itself with the past. While it gives us a faithful picture of the present, it describes the local conditions of former times. In other words, it is not only an outlook into space but the starting point for history. The value of home geography lies in the fact that it enables the teacher to present concretely the geographical features of the vicinity. With these features, thus observed, as basal ideas, the learner can be taught by analogy to get a clear idea of such forms as do not come within his immediate experience. In short, home geography is practical geography, and should, therefore, be the preparatory step to geography in general. Gender, Masculinities and Lifelong Learning reflects on current debates and discourses around gender and education, in which some academics, practitioners and policy-makers have referred to a crisis of masculinity. This book explores questions such as: Are men under-represented in education? Are women outstripping men in terms of achievement? What evidence supports the view that men are becoming educationally disadvantaged? Drawing on research from a number of countries, including the UK, Australia, New Zealand and Canada, the contributors' discuss a range of issues which intersect with gender to impact on education, including structural factors such as class, ethnicity and age as well as colonisation and migration. The book provides evidence and argument to illuminate contemporary debates about the involvement of men and women in education, including: The impact of colonisation on the gendering of education and lifelong learning International surveys on men, women and educational participation Gender, masculinities and migrants' learning experiences Boys-only classes as a response to 'the problem of underachieving boys' Men's perspectives on learning to become parents Community learning, gender and public policy Older men's perspectives on (re-)entering post-compulsory education The book goes on to suggest the implications for practice, research and policy. Importantly, it critically addresses some of the taken-for-granted beliefs about men and their engagement in lifelong learning, presenting new evidence to demonstrate the complexity of gender and education today. With these complexities in mind, the authors provide a framework for developing further understanding of the issues involved with gender and lifelong learning. Gender, Masculinities and Lifelong Learning will be of interest to any practitioner open to fresh ideas and approaches in teaching and programming connected with gender and education.
