Oxford Handbook of Paediatrics 3e

Oxford University Press

This book provides anaesthetists, intensivists and other critical care staff with a comprehensive resource that offers ways of improving communication in everyday clinical practice, and provides practical communication tools that can be

used in difficult or unfamiliar circumstances. It demonstrates how communication can be structured to improve patient care and safety with numerous practical examples and vignettes illustrating how the concepts discussed can be integrated into clinical practice, and presents ideas in a way that enhances clinical interactions with patients and colleagues and facilitate the teaching of trainees. Section 1 contains theoretical and research-based material on which the communication models and concepts used in the book are based. Section 2 details examples of how communication skills can be integrated into clinical practice. Section 3 addresses special situations including: obstetrics; paediatrics; needle phobia; how to break bad news; and the Intensive Care Unit. Section 4 provides examples of other interpersonal and professional

communication skills relevant to the acute care clinician such as, 'Talking to surgeons' and 'Team communication'. Finally, Section 5 builds on many of the concepts used earlier in the book and briefly presents how the innovative use of advanced 'hypnotic' communication skills can supplement and enhance anaesthesia and critical care. Edited by practising anaesthetists with particular expertise in teaching communication, and with contributions from expert clinicians based in North America, Europe and Australasia, this book will stimulate and complement the development of comprehensive resources for communication skills teaching in anaesthesia and other related professional groups.
