This publication is a result of a 2-year innovative, exploratory, and reflective study of cities as unique urban spaces that support life, work, and play. It responds to major issues that affect the quality of life of urban residents. This publication offers practical ways on how urban managers, urban practitioners, businesspeople, and citizens can engage to make cities more

livable by building on their distinctive physical, social, cultural, and economic characteristics. With the adoption of the Sustainable Development Goals by the United Nations, the book comes at the right time to offer integrated urban development solutions that can translate global development commitments into urban-level actions to achieve livable cities.

Asian countries are catching up with the West by transforming their primarily agrarian societies into industrial powerhouses. Manufacturing is driving innovation, productivity growth, and higher standards of living for billions of Asians. In the colonial past, the Asian production and supply chains served Western consumers. The world is now poised to evolve, led by a unified Asian business landscape capable of driving sustainable global growth within industries and markets. The Global Rise of Asian Transformation provides insights into the complex process of macro-political and economic dynamics reshaping the business landscape throughout Asia. This edited collection lays bare the megatrends that are challenging the region, including emerging consumers, urbanization, infrastructure, climate change, and energy megatrends that will further bolster the region's world standing if governments and businesses handle them adeptly. Case studies of major international companies, such as Sony, Lenovo, and Tata Motors, are also included.

In the last fifty years, the world economy has benefited from a globalization process driven by the enlightened confluence of technology, innovation, trade, and foreign direct investment. This book broadens our understanding of that process. Opening with a review of current global economic metrics and the significant differences between advanced and developing nations, the book goes on to discuss the globalization paradigm and the forces driving it. Also covering the evolution of international trade, the book reviews trade distortions from external and internal sources, comparing trade on a multilateral, non-discriminatory basis with alternative trade practices. Describing the rapidly growing

practice of foreign direct investment, the book shows how FDI is closely linked to international trade and concludes with a review of the important function FDI can play.

The annual Trends in Telecommunication Reform publications are a key part of the dialogue with the world's information and communications technology (ICT) policy-makers and regulators in an increasingly converged digital environment. Under the overarching theme "Regulatory incentives to achieve digital opportunities", the 16th edition of Trends explores topical issues regulators need to address to ensure that citizens can benefit from the social and economic opportunities brought about by the digital economy. For digital opportunities to fully materialize, an adaptive, consultative and innovative approach to ICT policy and regulation is more than ever necessary. The thematic chapters, drawing up from discussion papers presented at the 2015 ITU Global Symposium for Regulators, examine investment strategies to foster the deployment of broadband and access to the digital economy, network sharing and co-investment regulation, regulation and the Internet of Things (IoT), interoperability in the digital ecosystem and smart regulation to facilitate m-services and applications uptake and diffusion.

World Bank Technical Paper 249. These papers from a World Bank-sponsored seminar address two timely issues: water policy and water markets. The Bank has emphasized that water must be treated as an economic and social good. From a management viewpoint, countries should explore the efficient allocation of water through the use of pricing. Although pricing through

markets has existed for some time, the use of these markets has not been widespread. This volume covers the traditional fields in water management. Section I discusses water policy in the Middle East, North Africa, and China's Yellow River Basin. The second section reviews the Bank's experience with irrigation and drainage and the attitudes of water resources professionals toward problems in this area. The final section targets the general aspects of water markets with case studies from Chile, Mexico, Spain, and the United States. The suitability of markets for Central Asia and the Indo-Gangetic basin is also examined.

The Asian Development Bank, Erdenes Mongol LLC, and the Business Council of Mongolia worked together to organize the Central Asia Regional Economic Cooperation (CAREC) Investment Forum that took place on 24 September 2015 in Ulaanbaatar, Mongolia. The forum was the first-ever conference to focus on the investment environments in the CAREC countries. More than 300 high-level government officials and business leaders from 26 countries attended the event to share their insights on how to make effective investments within the region. They also shared their experiences and expectations on how to manage investments in Mongolia. The main topics discussed during the conference were: (i) generating a recipe for success in the CAREC region that will focus on identifying and making good investments, (ii) exploring the investment environment and policies in CAREC member countries, and (iii) investing in a regionally connected Mongolia.

As organizations continue to move towards digital enterprise, the need for digital transformation continues to grow especially due to the COVID-19 pandemic. These impacts will last far into the future, as newer digital technologies continue to be accepted, used, and developed. These digital tools will forever change the face of business and management. However, on the road to

digital enterprise transformation there are many successes, difficulties, challenges, and failures. Finding solutions for these issues through strategic thinking and identification of the core issues facing the enterprise is of primary concern. This means modernizing management and strategies around the digital workforce and understanding digital business at various levels. These key areas of digitalization and global challenges, such as those during or derived from the pandemic, are new and unique; They require new knowledge gained from a deep understanding of complex issues that have been examined and the solutions being discovered. *Emerging Challenges, Solutions, and Best Practices for Digital Enterprise Transformation* explores the key challenges being faced as businesses undergo digital transformation. It provides both solutions and best practices for not only handling and solving these key issues, but for becoming successful in digital enterprise. This includes topics such as security and privacy in technologies, data management, information and communication technologies, and digital marketing, branding, and commerce. This book is ideal for managers, business professionals, government, researchers, students, practitioners, stakeholders, academicians, and anyone else looking to learn about new developments in digital enterprise transformation of business systems from a global perspective.

Global Warming: Causes, Impacts and Solutions covers all aspects of global warming including its causes, impacts, and engineering solutions. Energy and environment policies and strategies are scientifically discussed to expose the best ways to reduce global warming effects and protect the environment and energy sources affected by human activities. The importance of green energy consumption on the reduction of global warming, energy saving and energy security are also discussed. This book also focuses on energy management and conservation strategies for better utilization of energy sources and technologies in buildings and industry as well as ways of improving energy efficiency at the end use, and introduces basic methods for designing and sizing cost-effective systems and determining whether it is economically efficient to invest in specific energy efficiency or renewable energy projects, and describes energy audit producers commonly used to improve the energy efficiency of residential and commercial buildings as well as industrial facilities. These features and more provide the tools necessary to reduce global warming and to improve energy management

leading to higher energy efficiencies. In order to reduce the negative effects of global warming due to excessive use of fossil fuel technologies, the following alternative technologies are introduced from the engineering perspective: fuel cells, solar power generation technologies, energy recovery technologies, hydrogen energy technologies, wind energy technologies, geothermal energy technologies, and biomass energy technologies. These technologies are presented in detail and modeling studies including case studies can also be found in this book.

Since the coming into force of the United Nations Law of the Sea, states have been targeting outlying islands to expand their exclusive economic zones, simultaneously stirring up strident nationalism when such plans clash with those of neighbouring states. No such actions have brought the world closer to the brink of war than the ongoing face-off between China and Japan over the Diaoyu/Senkaku islands, an uninhabited archipelago in the East China Sea. In this timely and original book, Godfrey Baldacchino provides a detailed exploration of seven tried and tested solution protocols that have led to innovative 'win-win' solutions to island disputes over the last four centuries. A closer look at the circumstances and processes that brought contending regional powers to an honourable, even mutually advantageous, settlement over islands provides a convincing and original argument as to why the conflict over the Diaoyu/Senkaku islands need not conclude in a 'zero-sum' or 'winner takes all' solution, as

is the likely outcome of both open conflict and international arbitration. The book will be of interest to scholars and practitioners concerned with the festering Diaoyu/Senkaku dispute, as well as students, scholars and policy specialists in geography, geopolitics, international relations, conflict studies, island studies, Asian studies and history.

Cities and city regions are undergoing rapid transformation. They are prime locations of innovation, while at the same time facing growing problems of spatial fragmentation and social exclusion. By addressing these problems, cities become forerunners for new patterns of governance, which include increasingly private actors. While research on 'global' cities has focused primarily on the world's leading financial and economic centres, comparative research on the changing role of large, complex cities in the developing world is less advanced. But it is here, where public problems are most seriously threatening the cohesion of urban society and where the need for new answers is most urgent. Illustrated by in-depth examinations of four city regions: Shanghai, Mumbai, Johannesburg and São Paulo, this book readdresses this balance. The book revisits the same set of cities from different angles, thereby reflecting urban contradictions, juxtapositions, and disjunctures.

Introducing Global Health: Practice, Policy, and Solutions is a contemporary overview of the major issues in global public health. The book explores how population health might be maximized with the right blend of health system, education, anti-poverty, infectious disease, urban development, governance, and incentive-based policies. It covers topics critical for understanding the state of the world today, including wars for natural resources, the missing women phenomenon, and whether global aid really works. The book's case studies focus on developing economies, mixed economies, and new emerging superpowers. Thematic chapters are interwoven with running

motifs, such as the health risks and benefits associated with different totalitarian, capitalist, and market socialist economies. Moving beyond statistics, the book represents a major innovation in the teaching of global health by presenting technical concepts including the incidence and prevalence of disease within the context of more accessible topics such as global poverty. This helps students contextualize otherwise challenging but critical concepts, such as the burden of infectious disease. By encouraging reflection, focusing on what works, and using activities and exercises, Introducing Global Health both teaches fundamentals of global public health and cultivates a policy perspective that is appealing and compelling for today's students.
