 Analog Communication is the technology which uses Analog signal for the transmission of information. Digital Communication is the technology which uses digital signal for the transmission of information. Difference between Analog and Digital Communication (with ...)
 As the signals are digitized, there are many advantages of digital communication over analog communication, such as – The effect of distortion, noise, and interference is much less in digital signals as they are less affected. Digital circuits are more reliable. Digital circuits are easy to design and cheaper than analog circuits.
 Digital Communication - Analog to Digital - Tutorialspoint
 Modern Digital and Analog Communication Systems are suitable for students with or without prior knowledge of probability theory. Only after laying a solid foundation in how communication systems work does the authors delve into analyses of communication systems that require probability theory and random processes.

 However, analog signals require hardware receivers and transmitters that are designed to perfectly fit the particular transmission. Digital signals are more tolerant to noise, but digital signals can be completely corrupted in the presence of excess noise.

 Analog and digital signals are used to transmit information, usually through electric signals. In both these technologies, the information, such as any audio or video, is transformed into electric signals.
 Analog vs Digital - Difference and Comparison | Diffen
 The communication based on analog signals and analog values is called as Analog Communication. Digital Signal A signal which is discrete in nature or which is non-continuous in form can be termed as a Digital signal .

 Flexibility: Digital communication systems can transmit real-valued discrete-time signals, which could be analog ones obtained by analog-to-digital conversion, and symbolic-valued ones (computer data, for example).
 Analog vs digital communication - UK Essays
 Definition: Analog and digital communications are the two types of data transmission system however several factors generate the difference between the two. The major difference between analog and digital communication lies in the signal being transmitted. In analog communication, the message signal is in analog form i.e., continuous time signal.
