Reinforcement learning models are a type of state-based models that utilize the markov decision process(MDP). The basic elements of RL include: Episode(rollout) : playing out the whole sequence of state and action until reaching the terminate state; Current state s (or s_t): where the agent is current at; Next state s' (or s_{t+1}): next state from the current state; Action a : the action to ...

For ASME Code Section 8 scope and boundaries, review the Pressure Vessel Definition article. You may know ASME Code Section 8 has three divisions. Division 1 covers pressure up to 3000 psi, Division 2 has an alternative rule and covers up to 10,000 psi and Division 3 can be used for pressure higher than 10,000 psi.

8.2 Changing Behaviour through Reinforcement and ...

Reinforcement learning is an area of machine learning that is focused on training agents to take certain actions at certain states from within an environment to maximize rewards. Let's say I want to make a poker playing bot (agent). The bot will play with other bots on a poker table with chips and cards (environment). This bot should have the ability to fold or bet (actions) based on the ...
