Oxford University Press, USA
From social networking sites to game design, from blogs to game play, and from fan fiction to commercial web sites, *Girl Wide Web 2.0* offers a complex portrait of millennial girls online. Grounded in an understanding of the ongoing evolution in computer and

internet technology and in the ways in which girls themselves use that technology, the book privileges studies of girls as active producers of computer/internet content, and incorporates an international/intercultural perspective so as to extend our understanding of girls, the Internet, and the negotiation of identity. "The global complexities of girlhood, new media, and identities are highlighted in this cutting-edge anthology. Girlhood is broadly defined, encompassing a range of ages as well as

social locations across class, nation, race, ethnicity, and sexuality; the authors are acutely aware of the ways in which power and politics circumscribe the new media environment, addressing the impacts on girls' lives of the digital divide, poverty, gender violence, transnational marketing and consumerism, and cultural forces. At the same time, girls' self-definition, agency, and resistance shines through in these essays, as girls tap into the power of the Web and use it to articulate their diverse experiences and stances. This is an important and exciting follow-up to the first Girl Wide Web anthology, expanding the scope and substance of contemporary girl studies."---Meenakshi Gigi Durham, Associate Professor, University of Iowa; author of *The Lolita*

Effect "This compelling sequel to *Girl Wide Web* expands and enriches our understanding of both girlhood and the Internet during the Web's second generation. Validating girl's media practices around the globe while also complicating notions of agency, literacy, community, and civic engagement via attention to difference, the contributors and their research subjects demonstrate the complex interactions, negotiations, and performances of girls' participatory cyberculture."---Mary Celeste Kearney, author of *Girls Make Media*

This book provides a comprehensive yet short description of the basic concepts of Complex Network theory. In contrast to other books the authors present these concepts through real case studies. The application topics span from Foodwebs, to the Internet, the World Wide Web and the Social Networks, passing through the International Trade Web and Financial time series. The final part is devoted to definition and implementation of the most important network models. The text provides information on the structure of the data and on the quality of available datasets. Furthermore it provides a series of codes to allow immediate implementation of what is theoretically described in the book. Readers already used to the concepts introduced in this book can learn the art

of coding in Python by using the online material. To this purpose the authors have set up a dedicated web site where readers can download and test the codes. The whole project is aimed as a learning tool for scientists and practitioners, enabling them to begin working instantly in the field of Complex Networks.

The Internet Book Internet & World Wide Web The goal of Deitel & Associates, Inc.'s Internet & World Wide Web How to Program, 3/e is to introduce readers with little or no programming experience to the exciting world of Web-based applications. This comprehensive book with accompanying CD-ROM teaches the fundamentals needed to program on the Internet. Readers will be well-prepared to build real-world, industrial-strength,

Web-based applications. In-depth coverage of introductory programming principles, various markup languages (XHTML, Dynamic HTML and XML), several scripting languages (JavaScript, VBScript, Perl, Python, PHP, ColdFusion, and FlashActionScript), Web servers (IIS and Apache), and relational databases (MySQL) provide all the skills and tools needed to create dynamic Web-based applications. This new edition contains chapters on Macromedia ColdFusion, a leading server-side scripting software package, and Macromedia Dreamweaver, a powerful WYSIWYG editor and Web application creation tool. Hundreds of LIVE-CODE examples (i.e., complete, working programs) of real applications throughout the book and on the accompanying CD allow readers to

run the applications and see and hear the outputs. Readers learn to incorporate multimedia into Web pages and Web-based applications to enhance their presentations. Chapters on e-Business and Accessibility for people with disabilities expose readers to a wide range of other topics. For Internet and Web-based computer programmers, and others in organizations and businesses who need to develop their own Websites and pages. Internet and World Wide Web "This guide is not intended to answer every single question you might have about Internet tools and culture ... The Net itself changes so fast that it is impossible to create a perfectly stable source of information and instruction ... [The author] has provided information about how to find many help files and

guides, but the best way to learn the technical, social, and educational ways of the Net is to dive right into it. From that perspective, this book is a starting point on your journey":--Pref.

The Internet Book, Fifth Edition explains how computers communicate, what the Internet is, how the Internet works, and what services the Internet offers. It is designed for readers who do not have a strong technical background — early chapters clearly explain the terminology and concepts needed to understand all

the services. It helps the reader to understand the technology behind the Internet, appreciate how the Internet can be used, and discover why people find it so exciting. In addition, it explains the origins of the Internet and shows the reader how rapidly it has grown. It also provides information on how to avoid scams and exaggerated marketing claims. The first section of the book introduces communication system concepts and terminology. The second section reviews the history of the Internet and its incredible growth. It documents the rate at which the digital revolution occurred, and provides background that will help readers appreciate the significance of the underlying design. The third section describes basic Internet technology and

capabilities. It examines how Internet hardware is organized and how software provides communication. This section provides the foundation for later chapters, and will help readers ask good questions and make better decisions when salespeople offer Internet products and services. The final section describes application services currently available on the Internet. For each service, the book explains both what the service offers and how the service works. About the Author Dr. Douglas Comer is a Distinguished Professor at Purdue University in the departments of Computer Science and Electrical and Computer Engineering. He has created and enjoys teaching undergraduate and graduate courses on computer networks and Internets, operating systems,

computer architecture, and computer software. One of the researchers who contributed to the Internet as it was being formed in the late 1970s and 1980s, he has served as a member of the Internet Architecture Board, the group responsible for guiding the Internet's development. Prof. Comer is an internationally recognized expert on computer networking, the TCP/IP protocols, and the Internet, who presents lectures to a wide range of audiences. In addition to research articles, he has written a series of textbooks that describe the technical details of the Internet. Prof. Comer's books have been translated into many languages, and are used in industry as well as computer science, engineering, and business departments around the

world. Prof. Comer joined the Internet project in the late 1970s, and has had a high-speed Internet connection to his home since 1981. He wrote this book as a response to everyone who has asked him for an explanation of the Internet that is both technically correct and easily understood by anyone. An Internet enthusiast, Comer displays INTRNET on the license plate of his car.

Twenty-First Century Books

The acclaimed editor of The New York Times Book Review takes readers on a nostalgic tour of the pre-Internet age,

offering powerful insights into both the profound and the seemingly trivial things we've lost. NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY CHICAGO TRIBUNE AND THE DALLAS MORNING NEWS • “A deft blend of nostalgia, humor and devastating insights.”—People Remember all those ingrained habits, cherished ideas, beloved objects, and stubborn preferences from the pre-Internet age? They're gone. To some of those things we can say good riddance. But many we miss terribly. Whatever our emotional response to this departed realm, we are faced with the fact that nearly every aspect of modern life now takes place in filtered, isolated corners of cyberspace—a space that has slowly subsumed our physical habitats,

replacing or transforming the office, our local library, a favorite bar, the movie theater, and the coffee shop where people met one another's gaze from across the room. Even as we've gained the ability to gather without leaving our house, many of the fundamentally human experiences that have sustained us have disappeared. In one hundred glimpses of that pre-Internet world, Pamela Paul, editor of The New York Times Book Review, presents a captivating record, enlivened with illustrations, of the world before cyberspace—from voicemails to blind dates to punctuation to civility. There are the small losses: postcards, the blessings of an adolescence largely spared of documentation, the Rolodex, and the genuine surprises at high school

reunions. But there are larger repercussions, too: weaker memories, the inability to entertain oneself, and the utter demolition of privacy. 100 Things We've Lost to the Internet is at once an evocative swan song for a disappearing era and, perhaps, a guide to reclaiming just a little bit more of the world IRL.

The chapters provide a wide-ranging view of issues addressing how advertisers can proceed on the Internet and World Wide Web. An initial chapter traces the development of Web advertising from its very beginnings as it was represented and discussed in the pages of Advertising Age. Although there is a noticeable trend to define Web advertising by comparing it to traditional media, it is clear that Web advertising just won't fit the old mold. Keith Reinhard of DDB Needham actually articulates this linkage between the old and new in his invited chapter. What the reader will encounter in Advertising and the World Wide Web is a solid conception of how Web advertising is different from anything that has come before. There are numerous discussions

on consumer and advertiser interactivity, the role of Web advertising within larger campaigns, audience segmentation, and alternative Web-based promotion formats. The five sections cover definition and theory, structure, specific applications, legal issues, and the voice of the practitioner. Although there remain a few nay-sayers concerning the future of Web advertising, the reader will be able to see just how incredibly high-impact this new medium has become and the vast potential that it holds for future promotional endeavors.

Internet and World Wide Web Simplified Houghton Mifflin College Division J.-E. Dubois and N. Gershon This book was inspired by the Symposium on "Communications and Computer Aided Systems" held at the 14th International CODATA Conference in September 1994

in Chambéry, France. It was conceived and influenced by the discussions at the symposium and most of the contributions were written following the Conference. This is the first comprehensive book, published in one volume, of issues concerning the challenges and the vital impact of the information revolution (including the Internet and the World Wide Web) on science and technology. Topics concerning the impact of the information revolution on science and technology include:

- Dramatic improvement in sharing of data and information among scientists and engineers around the world
- Collaborations (on-line and off-line) of scientists and engineers

separated by distance .

- Availability of visual tools and methods to view, understand, search, and share information contained in data
- Improvements in data and information browsing, search and access and
- New ways of publishing scientific and technological data and information.

These changes have dramatically modified the way research and development in science and technology are being carried out. However, to facilitate this information flow nationally and internationally, the science and technology communities need to develop and put in place new standards and policies and resolve some legal issues.
