Designing and Conducting Health Surveys is written for students, teachers, researchers, and anyone who conducts health surveys. This third edition of the standard reference in the field draws heavily on the most recent methodological research on survey design and the rich storehouse of insights and implications provided by cognitive research on question and questionnaire design in particular. This important resource presents a total survey error framework that is a useful compass for charting the dangerous waters between systematic and random errors that inevitably accompany the survey design enterprise. In addition, three new studies based on national, international, and state and local surveys—the UNICEF Multiple Indicator Cluster Surveys, California Health Interview Survey, and National Dental Malpractice Survey—are detailed that illustrate the range of design alternatives available at each stage of developing a survey and provide a sound basis for choosing among them.

Principal component analysis is probably the oldest and best known of the It was first introduced by Pearson (1901), techniques of multivariate analysis. and developed independently by Hotelling (1933). Like many multivariate methods, it was not widely used until the advent of electronic computers, but it is now well entrenched in virtually every statistical computer package. The central idea of principal component analysis is to reduce

the dimensionality of a data set in which there are a large number of interrelated variables, while retaining as much as possible of the variation present in the data set. This reduction is achieved by transforming to a new set of variables, the principal components, which are uncorrelated, and which are ordered so that the first few retain most of the variation present in all of the original variables. Computation of the principal components reduces to the solution of an eigenvalue-eigenvector problem for a positive-semidefinite symmetric matrix. Thus, the definition and computation of principal components are straightforward but, as will be seen, this apparently simple technique has a wide variety of different applications, as well as a number of different derivations. Any feelings that principal component analysis is a narrow subject should soon be dispelled by the present book; indeed some quite broad topics which are related to principal component analysis receive no more than a brief mention in the final two chapters.

The premise that intercultural contact produces intercultural competence underpins much rationalization of backpacker tourism and in-country language education. However, if insufficiently problematized, pre-existing constructions of cultural 'otherness' may hinder intercultural competence development. This is nowhere truer than in contexts in which wide disparities of power, wealth, and privilege exist, and where such positionings may go unproblematized. This study contributes to theoretical understandings of how intercultural competence develops through intercultural contact situations through a detailed, multiple case study of three conceptually comparable contexts in which Western backpackers study Spanish in Latin America. This experience, often 'bundled' with home-stay, volunteer work, social, and tourist experiences, offers a rich set of empirical data within which to understand the nature of intercultural competence and the processes through which it may be developed. Models of a single, context-free,

transferable intercultural competence are rejected. Instead, suggestions are made as to how educators might help prepare intercultural sojourners by scaffolding their intercultural reflections and problematizing their own intersectional identities and their assumptions. The study is a critical ethnography with elements of autoethnographic reflection. The book therefore also contributes to development of this qualitative research methodology and provides an empirical example of its application.

The Way of The Linguist, A language learning odyssey. It is now a cliché that the world is a smaller place. We think nothing of jumping on a plane to travel to another country or continent. The most exotic locations are now destinations for mass tourism. Small business people are dealing across frontiers and language barriers like never before. The Internet brings different languages and cultures to our finger-tips. English, the hybrid language of an island at the western extremity of Europe seems to have an unrivalled position as an international medium of communication. But historically periods of cultural and economic domination have never lasted forever. Do we not lose something by relying on the wide spread use of English rather than discovering other languages and cultures? As citizens of this shrunken world, would we not be better off if we were able to speak a few languages other than our own? The answer is obviously yes. Certainly Steve Kaufmann thinks so, and in his busy life as a diplomat and businessman he managed to learn to speak nine languages fluently and observe first hand some of the dominant cultures of Europe and Asia. Why do not more people do the same? In his book *The Way of The Linguist*, A language learning odyssey, Steve offers some answers. Steve feels anyone can learn a language if they want to. He points out some of the obstacles that hold people back. Drawing on his adventures in Europe and Asia, as a student and businessman, he describes the rewards that come from knowing languages. He relates his evolution as a language learner, abroad and back in his native Canada and explains the kind of attitude that will enable others to achieve second language fluency. Many people have taken on the challenge of language learning but have been frustrated by their lack of success. This book offers detailed advice on the kind of study practices that will achieve language breakthroughs. Steve has developed a language learning system available online at: www.thelinguist.com.

It is startling and it is shaming: in a country that prides itself on being among the most enlightened in the world, 25 million American adults cannot read the poison warnings on a can of pesticide, a letter from their child's teacher, or the front page of a newspaper. An additional 35 million read

below the level needed to function successfully in our society. The United States ranks forty-ninth among 158 member nations of the UN in literacy, and wastes over \$100 billion annually as a result. The problem is not merely an embarrassment, it is a social and economic disaster. In *Illiterate America*, Jonathan Kozol, author of National Book Award-winning *Death at an Early Age*, addresses this national disgrace. Combining hard statistics and heartrending stories, he describes the economic and the human costs of illiteracy. Kozol analyses and condemns previous government action—and inaction—and, in a passionate call for reform, he proposes a specific program to conquer illiteracy. One out of every three American adults cannot read this book—which is why everyone else must.
