The 'Arab Spring' of 2011 has affected the countries of the region to varying degrees, including the Gulf Cooperation Council (GCC) members, comprising Saudi Arabia, Kuwait, Qatar, the United Arab Emirates, Oman and Bahrain. The GCC has become a

significant regional bloc playing a vital economic and political role far beyond its shores, given its geopolitical strategic location, a preponderance of global energy reserves and a major international player through the use of accumulated financial reserves. A new Gulf is rising, one that is more self assertive, looking to expand its membership to other Arab countries such as Jordan and Morocco, while at the same time strengthening the bloc's relationship with current and emerging trading and strategic partners in Europe, USA and Asia. Regional and international realities, especially the uncertainties unleashed by

the 'Arab Spring', are forcing Gulf leadership to initiate new policies involving closer cooperation amongst GCC countries to address emerging challenges. This volume brings together thirty renowned academics and specialists to examine a range of multifaceted social, political and economic issues facing the GCC in key areas such as: · Diversification from a high dependency on a narrow hydrocarbon base · Social transformation, youth employment and effective gender participation · Outward and inward foreign direct investment flows · Prospects for education reforms and e-learning. · Sustainable security in oil, renewable energy (including nuclear) and food · Corporate governance, transparency and enhancing the private sector's operating environment · The role and governance of Gulf Sovereign Wealth Funds in investing their surpluses. The volume also offers insights for challenges facing the GCC in monetary union, expanding the regional debt market and Sukuk issuance, GCC intellectual property rights application, detailed assessments of individual GCC country risk analysis, as well as the sustainability of long term government fiscal stimulus programs at the expense of private sector involvement.

This Army tactics, techniques, and procedures (ATTP) reinforces the fundamentals of mission command established in field

manual (FM) 3-0, Operations; FM 5-0, The Operations Process; and FM 6-0, Mission Command. Whereas the above manuals focus on the fundamentals of mission command, this manual provides commanders and staff officers with tactics, techniques, and procedures (TTP) essential for the exercise of mission command. This is a new Army publication. It includes many of the appendices currently found in FM 5-0 and FM 6-0 that addressed the "how to" of mission command. By consolidating this material into a single publication, Army leaders now have a single reference to assist them with TTP associated with planning, preparing for, executing, and continually assessing operations. This ATTP also enables the Army to better focus the material in future editions of FMs 5-0 and 6-0 on the fundamentals of the operations process and mission command, respectively. Approaches based around complexity theory are increasingly being used in the study of organisations and the delivery of services. This is the first book to explore the application of complexity theory to difficult practice issues in criminal justice and social work and is intended to stimulate debate. It brings together experts in this emerging field to address complexity theory from a range of perspectives (positivist, realist, and constructivist), providing a detailed but accessible discussion of the key issues to whole systems approaches. The chapters cover theory and research on the nature of complex adaptive systems, their application to key areas of service delivery and the efficacy and ethics of criminal justice and social work interventions. The book argues for the usefulness of applying complexity theory to

address significant and intractable social problems and also challenges the reductionist approaches to solving those problems currently favoured by policy makers. It will be of interest to academics and postgraduate students in social work and criminal justice.

This book reviews the scientific evidence relevant to assessing the recidivism risk of sex offenders, as well as the issues related to sex offenders, in considerable detail. It is not an attempt for creating sympathy for sex offenders. Substantial numbers of psychologists claim they can accurately identify the recidivism risk of sex offenders. Despite the very limited, peer-reviewed data related to these claims, many psychologists insist the scientific evidence supports their efforts in this regard. Too often, the issues detailed in these chapters have been overlooked and/or misinterpreted. As a result, the likelihood of psychologists misusing and abusing scientific data when assessing sex offenders should not be underestimated. This book identifies numerous instances of such misuse and abuse. Topics include: sexually violent person civil commitment statutes, clinical judgment and clinical experience, guided clinical risk assessments, actuarial assessment of recidivism risk, actuarial instruments for assessing recidivism risk, computing classification accuracy, supplementary assessment procedures, adjusted actuarial assessments, diagnostic classification, treating sex offenders, and ethical obligations. Ultimately, however, the book challenges psychologists to recognize and respond to their scientific and professional responsibilities. When testifying as expert witnesses, ethical obligations prohibit psychologists from

misinforming and misleading legal proceedings. These same obligations necessitate that psychologists support their opinions with relevant research data.
