 In the last fifty years, Korea has transformed itself from an
 agrarian, Confucian-based culture into a global and technological
 powerhouse, and one of the most important political and
 economic forces in the world. Based on previous research and
 face-to-face interviews, the book shows how contemporary

Koreans negotiate traditional Confucian values and Western
 capitalistic values in their everyday encounters - particularly in
 business and professional contexts. This is a useful companion
 book for courses in international business, intercultural
 communication, and Asian studies.

Deep trade agreements (DTAs) cover not just trade but additional
 policy areas, such as international flows of investment and labor
 and the protection of intellectual property rights and the
 environment. Their goal is integration beyond trade or deep
 integration. These agreements matter for economic
 development. Their rules influence how countries (and hence, the
 people and firms that live and operate within them) transact,
 invest, work, and ultimately, develop. Trade and investment
 regimes determine the extent of economic integration,
 competition rules affect economic efficiency, intellectual property

rights matter for innovation, and environmental and labor rules contribute to environmental and social outcomes. This Handbook provides the tools and data needed to analyze these new dimensions of integration and to assess the content and consequences of DTAs. The Handbook and the accompanying database are the result of collaboration between experts in different policy areas from academia and other international organizations, including the International Trade Centre (ITC), Organisation for Economic Co-operation and Development (OECD), United Nations Conference on Trade and Development (UNCTAD), and World Trade Organization (WTO).

First Century Passion for the 21st Century World The Platinum Rule for Trade Show Mastery The Expert Exhibitor's Guide to Profit-Producing Trade Shows and Corporate Events Discover the Six Habits of Highly Empathic People A popular speaker and co-founder of The School of Life, Roman Krznaric has traveled the world researching and lecturing on the subject of empathy. In this lively and engaging book, he argues that our brains are wired for social connection. Empathy, not apathy or self-centeredness, is at the heart of who we are. By looking outward and attempting to identify with the experiences of others, Krznaric argues, we can become not only a more equal society, but also a happier and more creative one. Through encounters with groundbreaking actors, activists, designers, nurses, bankers and neuroscientists, Krznaric defines a new breed of adventurer. He presents the six life-enhancing habits of highly empathic people, whose skills enable them to connect with others in extraordinary ways - making themselves, and the world, more truly fulfilled.

There is a legend of a Welsh Prince Madoc whose ship became stuck in Chesapeake Bay. After trying unsuccessfully to escape, he had his men row out with the anchor, drop it as far into the sea as they could, and then the ship winched its way forward. The image of the church as a boat and tradition as an anchor is prevalent in Christian art. If we examine the biblical view of an anchor, we find, like Prince Madoc, we are to cast our anchor into the future and pull the church forward. Postmodern pilgrims must strive to keep the past and the future in perpetual conversation so every generation will find a fresh expression of the Gospel that is anchored solidly to "the faith that was once for all delivered."

In 1791, Treasury Secretary Alexander Hamilton wrote that "not only the wealth, but the independence and security of a country, appear to be materially connected with the prosperity of manufacturers." Centuries later, U.S. manufacturing jobs continue to be outsourced at an all-too-rapid pace. Examining the current U.S. manufacturing environment, including the unsustainable trade imbalance, *Intelligent Manufacturing: Reviving U.S. Manufacturing Including Lessons Learned from Delphi Packard Electric and General Motors* outlines concrete suggestions that can help to stop the outflow of manufacturing jobs and prosperity from our shores. The book explains why most companies have not reaped the benefits promised from the implementation of the multitude of methodologies that have inundated manufacturers and outlines the steps companies can take to reverse this trend.

The author's 30-year background in engineering and manufacturing, in both national and international assignments, puts him in a unique position to supply insights on foreign competition that few are able to provide. In addition to discussing the tools and concepts with a proven history of success, the book also elaborates on what doesn't work. It presents an insider's perspective of what went horribly wrong within Delphi and GM so other manufacturing companies can avoid making the same mistakes. The book describes how to effectively set up a manufacturing system and accurately measure and control direct labor. It shares easy-to-implement tools that the author developed and implemented with proven track records for improving performance. Such tools include computer programs that can provide a competitive advantage, a proven way to reduce total process cycle time, and a scientific way to establish proper lot sizes. Instead of presenting a lot of theory, the author provides ideas based on common sense and practical experience. The concepts and tools outlined in the text are simple and straightforward, yet powerful enough to help any conscientious company improve its competitive position.

Everything the independent investor needs to know to effectively invest in gold With today's increasing economic uncertainties, a strong investment strategy is to put a portion of your net worth in gold. However, given investors' overall lack of knowledge about gold as an investment, as wealth insurance, or as a store of value, many are hesitant to enter this arena. That's why Jim Gibbons has created *The Golden Rule*. This book answers many questions, including: How do you purchase gold and in what form? Why gold now? When should you buy? And, most importantly, from whom? Throughout the book, Gibbons puts gold in perspective and shows you why it belongs in every investor's portfolio. Provides practical gold investment insights from New York Times bestsellers Peter Schiff, William Bonner, Doug Casey, Addison Wiggin, and James Turk as well as from leading experts in this field including: Congressman Ron Paul, Rick Rule, Adrian Day, and many others Demystifies gold by putting it in the context of twenty-first century economic realities Highlights a variety of ways to invest in gold-from mining stocks to buying gold coins and bullion With the financial markets more erratic than ever, gold appeals to investors looking for a safe haven for their assets. With *The Golden Rule* as your guide, you'll quickly learn how to make the best decisions possible with regards to this precious commodity.

What is morality? Where does it come from? And why do most of us heed its call most of the time? In *Braintrust*, neurophilosophy pioneer Patricia Churchland argues that morality originates in the biology of the brain. She describes the "neurobiological platform of bonding" that, modified by evolutionary pressures and cultural values, has led to human styles of moral behavior. The result is a provocative genealogy of morals that asks us to reevaluate the priority given to religion, absolute rules, and pure reason in accounting for the basis of morality. Moral values, Churchland argues, are rooted in a behavior common to all mammals--the caring for offspring. The evolved structure, processes, and chemistry of the brain incline humans to strive not only for self-preservation but for the well-being of allied selves--first offspring, then mates, kin, and so on, in wider and wider "caring" circles. Separation and exclusion cause pain, and the company of loved ones causes pleasure; responding to feelings of social pain and pleasure, brains adjust their circuitry to local customs. In this way, caring is apportioned, conscience molded, and moral intuitions instilled. A key part of the story is oxytocin, an ancient body-and-brain molecule that, by decreasing the stress response, allows humans to develop the trust in one another necessary for the development of close-knit ties, social institutions, and morality. A major new account of what really makes us moral, *Braintrust* challenges us to reconsider the origins of some of our most cherished values.

Mario Baldassarri and Francesco Busato evaluate the impact produced by a new cycle of structural reforms over European Union economies. The structural reforms concern the size and the composition of government expenditure, the good and services markets, and the labour market. The book illustrates how the key challenge for European countries is not to discuss how policies could be implemented (e.g. fiscal policy competition Vs fiscal policy coordination), but to implement them.

Not only is this excellent collection of papers a fitting tribute to Angus Maddison, it is also a great resource for thinking about future patterns of global economic growth -- both in the BRICS and the OECD -- based on key insights from historical experience. -- Nicholas Crafts, University of Warwick, UK -- Angus Maddison may no longer be with us, but his spirit is very much alive. This collection of essays -- including one by Maddison himself -- shows how the methods he pioneered continue to shed new light on the comparative performance of nations and inspire successive generations of scholars. -- Barry Eichengreen, University of California at Berkeley, US -- The distinguished editors, leading authorities in the field of comparative quantitative economic development, have gathered a stellar group of authors to address arguably the most challenging question of our time: understanding development dynamics over time and across countries. They are to be congratulated for this comprehensive, stimulating and insightful volume. It is a fitting tribute to the late Angus Maddison, an intellectual giant in the study of long-term economic development, to whom the book is dedicated. -- Hal Hill, Australian National University World economic performance over the last 50 years has been spectacular. The post-war period has witnessed impressive growth rates in Western Europe and Japan, and in recent times, China and India. This new book discusses these issues and tackles topical questions such as: what are the socio-economic and institutional factors that have contributed to this impressive performance? Will China and India continue to grow at the same rate over the next two decades? What are the prospects for Japan, the US and other advanced economies? The book brings together contributions by eminent scholars including the late Angus Maddison, Professors Justin Lin, Bob Gordon, Ross Garnaut, Bart van Ark and others to provide answers to these fascinating questions. The chapters analyse the economic performance of selected countries including China, India, Japan, Indonesia and the US, as well as Western Europe, Latin America and developing countries as a group. The time period of the study is from 1850 to the present and includes forecasts to 2030. This well-documented book will be of considerable interest to development economists and country specialists working on countries such as China and India, economic historians who are interested in explaining the growth performance of countries, economists and economic statisticians who are interested in the measurement issues, and international organizations such as the OECD, World Bank and the UN. General readers and non-specialists who are interested in the world economic performance will also find much to interest them in this book.
