### **A Second Chance Surviving Sudden Cardiac Death, Living on Borrowed Time** IGI Global

An estimated 5-6 lakh people die every year due to sudden cardiac death (SCD) i.e., an unexpected death that occurs within an hour of collapse. This amounts to 10% of total mortality and 1/5 th of all cardiovascular deaths. In sudden cardiac arrest, a sudden dangerous rhythm disturbance of the heart occurs, stopping blood flow to vital organs. Permanent brain damage occurs if the circulation is not restored within 3 to 4 minutes, and hopes of survival become remote by the time they are shifted to hospitals. On-the-spot bystander action in providing a life-saving cardiopulmonary resuscitation (cardiac massage) or CPR and early shock to the chest can improve survival by 60 to 80%. This manual comprehensively covers all aspects of sudden cardiac arrest across various age groups and situations. Containing 40 Chapters, 12 Annexures and 175 References, it delves deeply into the historical evolution and latest medical management protocols of this life threatening emergency. The manual will serve as a valuable reference book for all doctors, nurses and para medical staff posted in critical care units, casualty and the periphery.

Ornato and Peberdy, both affiliated with the Virginia Commonwealth University Health System, collect reviews of the latest therapies and techniques for rescuing persons in cardiac arrest. Contributors explore the physiology behind current clinical resuscitation and translate it into practice bedside recommendations, clinical tips, and expert techniques. They also review major ongoing research in resuscitation science that will affect the next set of international resuscitation guidelines, and discuss the design of clinical trials and ethical issues surrounding

resuscitation of children and adults. Annotation : 2004 Book News, Inc., Portland, OR (booknews.com).

Denials Management & Appeals Reference Guide - First Edition  
John Wiley & Sons

Recoup lost time and revenue with denials management and appeals know-how. Claim denials can sink a profit margin. And given the cost of appeals, roughly \$118 per claim, not all denials can be reworked. A practice submitting 50 claims a day at an

average reimbursement rate of \$200 per claim should bring in \$10,000 in daily revenue. But if 10% of those claims are denied, and the practice can only appeal one, they lose \$800 per day—upwards of \$200K annually. Your medical claims are the lifeblood of operations. Don't compromise your financial health. Learn how to preempt denials with the Denials Management & Appeals Reference Guide. This vital resource will equip you to get ahead of payers by simplifying the leading causes of denials and showing you how to address insufficient documentation, failing to establish medical necessity, coding and billing errors, coverage stipulations, and untimely filing. Rely on AAPC to walk you through the appeal process. We'll help you establish protocols to avoid an appeals backlog and teach you how to identify and prioritize denials likely to win an appeal. What's more, you'll learn when a claim can be "reopened" to fix a problem. Collect the revenue your practice deserves with effective denials and appeals solutions: Know how to analyze your denials Defeat documentation and compliance issues for successful claims success Utilize payer policy for coverage clues Lock in revenue with face-to-face reimbursement guidance Refine efforts to avoid E/M claim denials Ace ICD-10 coding for optimum reimbursement Put an end to modifier confusion Stave off denials with CCI edits advice Navigate the appeals process like a pro And much more!
