The psychology of eating is regulated by neural mechanisms. When not well controlled, eating may result in disorders and health hazards such as obesity, type 2 diabetes mellitus, and vascular diseases. Lifestyles and cultures influence eating habits, thus there are differences in the prevalence of health problems depending upon living environments. This book examines the psychology and the pathophysiological outcomes of eating. Chapters address such topics as the influence of lifestyle, circadian rhythm, sleep, and fragrant odors on appetite and weight regulation; the impact of glucose, sucrose, lactate, and ketone bodies on the brain; the consequences of glycation stress on the skeletal muscle; and much more.

Over the past ten years there has been a massive growth in call centres worldwide. These centres are said to represent the most dynamic growth area in white-collar employment internationally since the mid 1990s. Yet the footloose and global nature of the industry means that jobs will always be susceptible to outsourced operations, ICT developments, public sector subsidization of business restructuring and re-location, and cheaper operations elsewhere. This book conducts a thorough analysis of this modern phenomenon.

Ischemic optic neuropathy, often referred to as a stroke of the optic nerve, is one of the major causes of visual impairment or loss of vision. Yet it is a highly controversial and confusing subject because of the general lack of in-depth scientific understanding of the subject. In this book the leading authority in the field describes in detail the current knowledge about the different forms of the often devastating disease. Insights into the underlying pathogenesis and peculiar clinical features are given, leading the reader to the most appropriate way of management. This information will help any physician dealing with patients who suffer from sudden loss of vision.

The elucidation of the mechanisms and kinematics of shear zone deformation, at both local and regional scales, is the subject of a great deal of interest to scientists in the hydrocarbon industry, in seismology, and in structural geology more generally. This book comprises a collection of five

theoretical and twelve regional contributions to the subject from a number of leading researchers in the field, with particular emphasis on work carried out in the Indian subcontinent. The book will be invaluable to advances students and researchers involved in the kinematics of shear.

In recent years, the number of conflicts related to the misuse of street art and graffiti has been on the rise around the world. Some cases involve claims of misappropriation related to corporate advertising campaigns, while others entail the destruction or 'surgical' removal of street art from the walls on which they were created. In this work, Enrico Bonadio brings together a group of experts to provide the first comprehensive analysis of issues related to copyright in street art and graffiti. Chapter authors shed light not only on the legal tools available in thirteen key jurisdictions for street and graffiti artists to object to unauthorized exploitations and unwanted treatments of their works, but also offer policy and sociological insights designed to spur further debate on whether and to what extent the street art and graffiti subcultures can benefit from copyright and moral rights protection.

Winner of the CHOICE Outstanding Academic Title 2017 Award This comprehensive collection of top-level contributions provides a thorough review of

the vibrant field of chemistry education. Highly-experienced chemistry professors and education experts cover the latest developments in chemistry learning and teaching, as well as the pivotal role of chemistry for shaping a more sustainable future. Adopting a practice-oriented approach, the current challenges and opportunities posed by chemistry education are critically discussed, highlighting the pitfalls that can occur in teaching chemistry and how to circumvent them. The main topics discussed include best practices, project-based education, blended learning and the role of technology, including e-learning, and science visualization. Hands-on recommendations on how to optimally implement innovative strategies of teaching chemistry at university and high-school levels make this book an essential resource for anybody interested in either teaching or learning chemistry more effectively, from experience chemistry professors to secondary school teachers, from educators with no formal training in didactics to frustrated chemistry students.

Ideas of Quantum Chemistry shows how quantum mechanics is applied to chemistry to give it a theoretical foundation. The structure of the book (a TREE-form) emphasizes the logical relationships between various topics, facts and methods. It shows the reader which parts of the text are needed for understanding specific aspects of the subject matter. Interspersed throughout the text are short biographies of key scientists and their contributions to the development of the field. Ideas of Quantum Chemistry has both textbook and reference work aspects. Like a textbook, the material is organized into digestible sections with each chapter following the same structure. It answers frequently asked questions and highlights the most important conclusions and the essential mathematical formulae in the text. In its reference aspects, it has a broader range than traditional quantum chemistry books and reviews virtually all of the pertinent literature. It is useful both for beginners as well as specialists in advanced topics of quantum chemistry. The book is supplemented by an appendix on the Internet. * Presents the widest range of quantum chemical problems covered in one book * Unique structure allows material to be tailored to the specific needs of the reader * Informal language facilitates the understanding of difficult topics

Introducing the essentials of modern geochemistry for students across the Earth and environmental sciences, this new edition emphasises the general principles of this central discipline. Focusing on inorganic chemistry, Francis Albarède's refreshing approach is brought to topics that range from measuring geological time to the understanding of climate change. The author leads the student through the necessary mathematics to understand the quantitative aspects of the subject in an easily understandable manner. The early chapters cover the principles and methods of physics and chemistry that underlie geochemistry, to build the students' understanding of concepts such as isotopes, fractionation, and mixing. These are then applied across many of the environments on Earth, including the solid Earth, rivers, and climate, and then extended to processes on other planets. Three new chapters have been added – on stable isotopes, biogeochemistry, and environmental geochemistry. End-of-chapter student exercises, with solutions available online, are also included.

When it comes to motivating people to learn, disadvantaged urban adolescents are usually perceived as a hard sell. Yet, in a recent MetLife survey, 89 percent of the low-income students claimed "I really want to learn" applied to them. What is it about the school environment "pedagogy, curriculum, climate, organization" that encourages or discourages engagement in school activities? How do peers, family, and community affect adolescents' attitudes towards learning? Engaging Schools reviews current research on what shapes adolescents' school engagement and motivation to learn "including new findings on students' sense of belonging" and looks at ways these can be used to reform urban high schools. This book discusses what changes hold the greatest promise for increasing students' motivation to learn in these schools. It looks at various approaches to reform through different methods of instruction and assessment, adjustments in school size, vocational teaching, and other key areas. Examples of innovative schools, classrooms, and out-of-school programs that have proved successful in getting high school kids excited about learning are also included.
