'This book tackles the two edge sword of non consumptive wildlife tourism: on net does it add to or detract from species conservation? The book does so with a treasure trove of original survey research on the supply and demand for wildlife tourism on both public and private lands from Antarctica to rainforests to marine wildlife. The economic analysis is one of the first to apply new behavioral economics to analyzing tourists' choices.' John Loomis, Colorado State University, US 'Does nature-based tourism help or hinder biodiversity conservation? The answer provided by this authoritative volume is that it depends on context and type of tourism and is no easy panacea. Indeed it can result in an under supply of nature conservation from an economic point of view. This book provides an excellent synthesis, supported by case studies, of the tourism conservation trade off problem, it will appeal to both academic and practitioner audiences.' R. Kerry Turner, CBE, University of East Anglia, UK 'This book encapsulates a lifetime's scholarly work between the authors. It sets out the platform upon which nature-based tourism may be discussed and debated, which it then enriches by a

series of case examples, mostly drawn from personal experience. In doing so it performs a valuable service to all interested in this field by capturing those detailed insights into nature-based tourism that are often only acquired by experience.' Stephen Wanhill, Editor, Tourism Economics 'In today's world, even nature seems to have to pay its own way. Nature-based Tourism and Conservation provides detailed real-life examples of how this is working in various parts of the world, from rainforests to Antarctica, and how the tradeoffs can best be measured. Clem Tisdell and Clevo Wilson provide a unique economic perspective to the various issues involved, providing practical illustrations of how others can incorporate the various ways of considering costs and benefits when deciding how to define the role nature-based tourism when planning conservation measures. This book will be useful to a wide range of audiences, from national protected area agencies to private land-owners who are establishing their own nature-based tourism enterprises.' Jeffrey McNeely, International Union for Conservation of Nature, Switzerland Nature-based Tourism and Conservation unearths new or neglected principles relevant to tourism and recreational economics, environmental valuation and economic theory. Its three parts have chapters on nature-based tourism and its relationships to conservation including case studies dealing with the

consequences of World Heritage listing of natural sites, Antarctic, subtropical and tropical national park-based tourism and an NGO's conservation efforts modelled on ecotourism. The final part focuses on tourism utilizing particular wildlife, including sea turtles, whales, penguins, royal albatross, glow-worms and tree kangaroos.

"Focusing on fundamental ecotourism concepts, this broad-based textbook provides a basis for studies into environmental-based tourism. It covers key topics such as the management, economics, and potential environmental impacts, both positive and negative, of this popular and growing sector"--

Tourism, Ecotourism, and Protected Areas CABI

This book provides holistic insights into management of protected areas across East Asia and identifies current trends in mountain tourism within the broader field of human geography and nature conservation. The book describes the diversification in visitors and expanding protected areas territories in different Asian countries during recent years. It also compares protected areas networks in the context of the changing demographic profiles of visitors and provides an interdisciplinary transnational appraisal of mountain-based tourism in Asia based on national and international statistics. The research combines specific case studies at the individual country and destination level with trans-regional trends, thereby offering analysis from both the perspective of supply (parks, protected areas, and stakeholders) and demand (mountain tourist market trends and segments). The book is a useful resource

for students and academics in tourism and protected areas studies as well as social scientists and policy-makers interested in Asian countries.

'Ecotourism' outlines the phenomenon of Ecotourism; its sources and its development as a concept. Conservation issues are now at the forefront of public opinion - Nature is calling us to its wilds and we are responding in droves. The decline of natural rainforests, loss of endangered species, global warming and land degradation have galvanised public support for conservation. The interest in Ecotourism and nature-orientated tourism has coincided with this worldwide concern Using relevant case studies, 'Ecotourism' examines the potential positive social and environmental benefits of Ecotourism and is ideal for both students of tourism and practitioners within the tourism industry. 'Ecotourism' will also be of interest to environmental groups, land managers, academics and planners. Indeed anyone interested in examining what Ecotourism is and how it may hold the potential to solve or at least mitigate several of the great problems of our age. An example being arguably the greatest of these dilemmas: to satisfy human needs for employment, income and economic development, while at the same time protecting the environment. Stephen Wearing and John Neil are both lecturers at the School of Tourism Studies, University of Technology, Sydney, Australia.

Guidelines for Planning and Management UNEP/Earthprint

From its late nineteenth century origins, the concept of protected areas has increased in scope and complexity. It now has to come to terms with the

twenty first century world of neo-liberal politics, performance metrics and the growing and complex demands of tourism. This international collection of papers explores how this might be done, detailing the issues involved, and the value and values that protected areas have for economies, peoples and environments. Special attention is given to World Heritage Sites, tourism planning and their communities, to the growth of private protected areas, and to the health values of protected areas. Other subjects include private sector business involvement in protected areas, concessions policy experiments, and how the work of the world's largest protected area agency, the US National Park Service, is adapting to changing political and market demands, and to the challenges of sustainable development. It concludes with a searching interview with a member of UNESCO's World Heritage Committee. The chapters were originally published in a special issue in the Journal of Sustainable Tourism.

"This book consists of several chapters dealing with the issue of environmental preservation of protected areas from a variety of perspectives. Chapter 1 deals with public management policies in Morocco, which in recent years have shifted from focusing on mass tourism to a more sustainable alternative by investing in protected areas, and the various roadblocks the country has faced in its attempt to do so. Chapter 2 focuses on Lar National Park, a protected area located northeast of Tehran, and how best to manage and preserve the area's wildlife in consideration of the needs of native people. Chapter 3 analyzes environmental conservation

laws in Nepal in connection with the rights of local people to access resources inside protected areas and proposes policies that would ensure a sustainable coexistence between humans and wildlife. Chapter 4 describes the impact that globalization has had on the introduction of invasive plant species in protected areas and the various ecosystem services these species can provide. Chapter 5 discusses how human society threatens protected areas in Argentina, and how environmental justice studies can contribute to improving the management effectiveness of protected areas considering their relationships with local communities. Chapter 6 details how protected areas can improve human well-being across several dimensions, and Chapter 7 explains how arsenic contamination in fishing resources impacts Brazilian ecology and culture. Finally, Chapters 8 and 9 consider threats to marine protected areas in Brazil and the impacts and challenges of ecotourism in protected areas, respectively"--

Tourism is good business, as it produces 4.4% of the world's GDP, and employs around 200 million people globally. It can also help the sustainable management of protected areas, as a market-based alternative catering to the growing number of discriminating travelers trying to find, understand and enjoy a natural environment. This publication is designed to assist protected area managers and other stakeholders in the planning and management of protected areas, visitor recreation and the tourism industry, so that tourism can develop in a sustainable fashion, while respecting local conditions and local communities.

Environmental Impacts of Tourism in Developing Nations Routledge

Around the world, there is mounting evidence that parks and protected areas contribute to a healthy civil society, thus increasing the economic importance of cultural and nature-based tourism. Operating at the intersection of business and the environment, tourism can improve human health and wellbeing as well as serve as a catalyst for increasing appreciation and stewardship of the natural world. While the revenues from nature-based activities help to make the case for investing in park and protected area management; the impacts they have need to be carefully managed, so that visitors do not destroy the natural wonders that attracted them to a destination in the first place. This book features contributions from tourism and recreation researchers and practitioners exploring the relationship between tourism, hospitality, protected areas, livelihoods and both physical and emotional human wellbeing. The book includes sections focused on theory, policy and practice, and case studies, to inform and guide industry decisions to address real-world problems and proactively plan for a sustainable and healthy future.

Tourism remains the world's most significant growth industry, and is a lifeline to the future for many developing countries. But there is often an environmental price to be paid for tourism, which is an activity that concentrates pressure on landscapes in both spatial (most people want to see the same things) and temporal (most people travel at the same time) senses. This collection addresses both the

growing trend in favor of "ecotourism" and its environmental impacts. Contributors present a sampling of nature tourism experiences (Kenya, Yellowstone, Costa Rica), and deal with nuts-and-bolts issues such as economics, marketing, and the crucial role of local involvement. The book focuses on the ways in which nature tourism can continue to stimulate local economies while minimizing environmental degradation. ISBN 1-55963-037-X: \$34.95.

Living on the Edge CABI

This book is a landmark contribution to the rapidly growing field of wildlife tourism, especially in regard to its underpinning foundations of science, conservation and policy. Written by a number of environmental and biological scientists it explains the synergy between wildlife and tourism by drawing on their global experiences.

The State of Nature-based Tourism Around the World and Guidelines for Its Development CABI

In the face of rapid industrialisation in the last few decades, the tourism economy has blossomed into a major industry with positive impacts such as economic growth, infrastructure development, employment, and income generation. However, tourism brings negative environmental effects such as degradation of landscapes and habitats, increased vulnerability of avifauna and wildlife, and pollution leading to the decline of species. *Environmental Impacts of Tourism in Developing Nations* is a pivotal reference source that explores some of the critical challenges faced in the tourism economy particularly with regard to the impacts on the environment in developing nations. It also explores the impact tourism plays in the biophysical

environment such as the issue of climate change. While highlighting topics such as environmental justice, ecosystems, and ecotourism, this book is ideally designed for academicians, policymakers, environmentalists, tourism professionals, and graduate-level students seeking current research on the environmental and economic impacts of tourism.

Issues and Experiences Routledge

In recent years, there is an increasing awareness on the need to sustain the environment and to protect it from the various damages caused by human activities including tourism. Ecotourism is viewed as a panacea to protect the environment from the negative impact of mass tourism and is considered as a sustainable option to bring employment, income and livelihood opportunities for host communities. This book *Ecotourism, Economics and Environment* is a compilation of research papers analyzing the economic, social, cultural and environmental impact of tourism in India. The papers focus on the positive effect ecotourism can bring about in making tourism development environmental friendly and sustainable. In general the essays included in this book covers the theoretical aspects related to ecotourism, with a stress on practical issues from a developing countries standpoint and case studies that highlight the stumbling blocks for migration from mass tourism to ecotourism in a developing nation.

Wildlife Tourism CABI

Drawing on case studies from Pacific Islands, Africa, Latin America and Southeast Asia, this book examines ecotourism enterprises controlled by indigenous people in tribal reserves or protected areas. It compares indigenous ecotourism in developed and developing

counties and covers cultural ecotours, ecolodges, and bungalows, hunting and fishing tours, cultural attractions and other nature-based facilities or services.

This volume discusses the complex relationship between Protected Areas and tourism and their impact on community livelihoods in a range of countries in Southern Africa. Protected

areas and tourism have an enduring and symbiotic relationship. While protected areas offer a desirable setting for tourism products, tourism provides revenue that can contribute to conservation efforts. This can bring benefits to local communities, but it can also have a negative impact, with the establishment of protected areas leading to the eviction of local communities from their original places of residence, while also preventing them from accessing the natural resources they once enjoyed. Taking a multi-disciplinary approach, this book addresses the opportunities and challenges faced by communities and other stakeholders as they endeavour to achieve their conservation goals and work towards improving community livelihoods. Case studies from Botswana, Malawi, Namibia, South Africa, Tanzania, Zambia and Zimbabwe address key issues such as human-wildlife conflicts, ecotourism, wildlife-based tourism, landscape governance, wildlife crop-raiding and trophy hunting, including the high-profile case of Cecil the lion. Chapters highlight both the achievements and positive outcomes of protected areas, but also the challenges faced and their impact on how protected areas are viewed and also conservation priorities more generally. The volume gives these issues affecting protected areas, local communities, managers and international conservation efforts centre stage in order inform policy and improve practice going forward. This book will be of great interest to students and scholars of conservation, natural resource management, tourism, sustainable development and African studies, as well as professionals and policymakers involved in conservation policy. The global tourism industry continues a trend of sustained growth, moving more people and generating domestic and foreign revenues, often at the expense of the social and ecological integrity of destination regions. As a result, tourism policy makers have been forced to consider a variety of new approaches to ensure that the environment, local people, tourists, and business remain unaffected by the negative impacts of the industry. **Benefit-Sharing from Protected Area Tourism** Springer This book describes the state of the art

of tourism planning and management in national parks and protected areas. It also provides guidelines for best practice in tourism operations. Other objectives are to: Describe case studies and guidelines that contribute to conservation of biological diversity; consider the role of local communities within or near these areas; outline the development of tourism infrastructure and services; discuss visitor management; provide guidelines to enhance the quality of the tourism experience. The focus is global and the book will appeal to both academics and practitioners.

Bringing together the diverse experiences of park agencies and managers, conservation NGO's and international agencies this book examines the role of tourism in

protected area management. Using case studies from around the world it provides examples of successful partnerships between community, public and private sectors. It also explores how tourism can be used as a management tool for financing protected areas. It concludes by summarizing the lessons learnt and the challenges facing protected areas in the future.
