 Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.

This book explores accounting for biological assets under IAS 41 – Agriculture, and explains the recent adjustments introduced by the IASB which allow firms to choose between cost or revaluation models concerning mature bearer plants. Identifying the firm and country-level drivers that inform the disclosure and measurement practices of biological assets, this concise guide examines the value relevance of measuring those assets at fair value. It also analyses how firm and country-level drivers explain the differences in the disclosure level and practices used to measure biological assets under IAS 41. Finally, it evaluates whether there is a difference in the relevance of biological assets among the listed firms with high and low disclosure levels on biological assets. Based on a major international study of a wide selection of firms and country-level drivers, this book is vital for standard setters, stakeholders, students, accountants and auditors who need to understand disclosure and measurement practices of biological assets under IAS 41.

Principles of Accounting Volume 1 - Financial Accounting Oxford University Press

Libby/Libby/Hodge wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Hodge successfully implements a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting. Libby/Libby/Hodge believes in the building-block approach to teaching transaction analysis. Most faculty agree that mastery of the accounting cycle is critical to success in financial accounting. And yet all other financial books introduce and develop transaction analysis in one chapter, bombarding a student early in the course with an overload of new concepts and terms. The authors believe that most faculty take more time with the accounting cycle, but other financial accounting textbooks don't. By slowing down the introduction of transactions and giving students time to practice and gain mastery, this building-block approach leads to greater student success in their study of later topics in financial accounting such as adjusting entries.

Financial Accounting II [CBCS WBSU] Pearson UK

This volume presents a new approach to today's tax controversies, reflecting that debates about taxation often turn on the differing worldviews of the debate participants. For instance, a central tension in academic tax literature - which is filtering into everyday discussions of tax law - exists between 'mainstream' and 'critical' tax theorists. This tension results from a clash of perspectives: Is taxation primarily a matter of social science or of social justice? Should tax policy debates be grounded in economics or in critical race, feminist, queer, and other outsider perspectives? To capture and interrogate what often seems like a

chasm between the different sides of tax debates, this collection comprises a series of pairs of essays. Each pair approaches a single area of controversy from two different perspectives - with one essay usually taking a 'mainstream' perspective and the other a 'critical' perspective. In writing their contributions, the authors read and incorporated reactions to each other's essays and paid specific attention to the influence of perspective on both the area of controversy and their contribution to the debate. With contributions from leading mainstream and critical tax scholars, this volume takes the first step toward bridging the gap between these differing perspectives on tax law and policy.
