The whirling motion of the charged ...With 'smoke ring' technology, fusion startup marks steady progressA new study explored why the severity of motion sickness varies from person to person by investigating sources of cybersickness during VR use. A new study led by Head of the Rokers Vision ...Predicting motion sickness severity from virtual realityTaking these points one at a time, Oppenheimer notes that in today's

regime of record-low interest rates, higher-risk stocks offer a premium; that is, their potential returns are far higher than safe ...

Physicists have finally used laser cooling to tame unruly antimatter atoms. That could allow new tests of symmetry and Einstein's theory of gravity.

Laser cooling of antihydrogen atoms

The successful laser cooling of trapped antihydrogen, the antimatter atom formed by an antiproton and a positron (anti-electron), is reported.

Taking these points one at a time, Oppenheimer notes that in today's regime of record-low interest rates, higher-risk stocks offer a premium; that is, their potential returns are far higher than safe ...

The importance of 'Motion' in politics

The physicist on Newton finding inspiration amid the great plague, how the multiverse can unite religions, and why a 'theory of everything' is within our grasp ...
