Van Schaik Publishers  
Providing clear, pedagogical steps and curriculum guidance, this practical book

focuses on laying the strong foundation that is needed to assist learners in using English as the language of learning and teaching (LoLT) from grade four onward. In grade four, the majority of learners make the transition from their home language to English as the LoLT; to assist learners in this transition, it is important that teachers introduce English into the classroom from as early as Grade R (reception year, prior to starting grade one). The earlier learners are exposed to English, the more proficient they will become. Included in this book are strategies for introducing English into the classroom, techniques for teaching

English alongside learners' home language, teaching resources for classroom use, and ideas for planning lessons.

From the bestselling author of *Charlie and the Chocolate Factory* and *The BFG!* Mr. and Mrs. Twit are the smelliest, nastiest, ugliest people in the world. They hate everything—except playing mean jokes on each other, catching innocent birds to put in their Bird Pies, and making their caged monkeys, the Muggle-Wumps, stand on their heads all day. But the Muggle-Wumps have had enough. They don't just want out, they want revenge.

*The Book of Squares* by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers,

squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

### **The Educator as Mediator of Learning**

Routledge

In both Europe and North America during the past 20 years, controversy has surrounded the education of children from linguistic minority backgrounds. An increasing number of minority children are experiencing difficulties at school and many leave school with no formal qualifications. There are fears among many

educators and policy-makers that an entire generation of alienated youth with no future prospects is being produced by western educational systems. This book analyses policy issues regarding the education of minority students in western industrialised societies and presents a number of case studies of programs that have been successful in reversing the pattern of minority students' academic failure. A central theme throughout the volume is that the causes of minority students' academic difficulties are rooted in the power relations between the dominant and subordinate groups in society. Schools have typically reflected and reinforced these power relations through

strategies such as punishment of children for speaking their mother tongue at school with the result that minority students have not developed confidence in their own cultural identity or academic abilities. Reversal of minority students' school failure requires that educators set out to enable both minority students and communities to empower themselves. The presentation of case studies in which this empowerment has been successfully achieved is complemented by the perspectives of individuals and minority communities who have been involved in the struggle for educational and linguistic rights of minority children.
