RESTful Web Services - javatpoint Java
Web Services In A web service is a
technology to communicate one

programming language with another. For
example, java programming language can
interact with PHP and .Net by using web
services. In other words, web service
provides a way to achieve interoperability.
Java Web Services Tutorial Learn Web
Services Tutorial - javatpoint Web Service

Tutorial. Webservices in java are used
everywhere nowadays. When human
interacts with any web page, it involves
request and response via HTML. When you
interact with the webpage, browser sends
a request and then renders response and
shows in form of HTML. Similarly, web

services also involve request and response but in the form of XML or JSON or plain text. [WebServices In Java Tutorial | Introduction to Web ...](#) Web services are developed using Java Technology APIs and tools provided by an integrated Web Services Stack called Metro. The Metro stack consisting of JAX-WS , JAXB , and WSIT , enable you to create and deploy secure, reliable, transactional, interoperable Web services and clients.
