A career retrospective of one of the world's most inventive contemporary illustrators, curated by the artist From an illustration of Donald Trump, his signature pout forming the shape of a fist, to Bob Dylan, seemingly composed of musical instruments, Noma Bar's innovative, playful style has made him one of the most sought-after illustrators working today. His use of negative space and minimalist forms creates images within images—layers of meaning that delight and surprise in equal measure. Each of Bar's illustrations tells a story that is hidden in the details, the whole

message revealing itself with a second look. For this retrospective volume, Bar has handpicked his iconic illustrations and favorite works, covering a range of topics, all in the distinctive style that has established his reputation. The works are organized into the thematic chapters Less More (daily life), Pretty Ugly (portraits), In Out (sex), and Life Death (conflict). Alongside the images, Bar reveals his working methods and the stories behind his often idiosyncratic inspiration for different illustrations, and he reflects on how his life experiences have shaped him as an artist. Noma Bar is a must-have reference source for students or professionals in the worlds of graphic design and illustration, and a treasury for any follower of visual and popular culture.

The relationship between science and belief has been a prominent subject of public debate for many years, one that has relevance to everything from science communication, health and education to immigration and national values. Yet, sociological analysis of these subjects remains surprisingly scarce. This wide-ranging book critically reviews the ways in which religious and non-religious belief systems interact with scientific theories and practices. Contributors explore how, for some secularists, 'science' forms an important part of social identity. Others examine how many contemporary religious movements justify their beliefs by making a claim upon science. Moving beyond the traditional focus on the United States, the book shows how debates about science and belief are firmly embedded in political conflict, class, community and culture.

Wickedly dark with a mystical edge, this story of an Italian love affair gone bad captures the irresistible pull of toxic relationships—from the acclaimed author of *Carnality*. A woman arrives in Florence, overwhelmed by the strange, warm city so different from her home. Amidst the Renaissance architecture and amorous couples, she finds an unexpected love of her own. With his

dark, ugly looks, people might stop and stare, wondering what someone like her was doing with someone like him. But he's the Mickey to her Minnie, and she can fix him—they can fix each other. She feels bound to him, body and soul. It's not long before the lying starts. Other women have begun to notice him, and she spirals into paranoia. Soon they're both cheating and lashing out, and she becomes more and more convinced he's not merely a violent man: there's a demon inside him, and inside her too. Their grip on each other is so strong, it might be impossible to break, even after she puts an ocean between them, following another man to New Orleans. Heady, unsettling, and shockingly funny with its dead-on descriptions of codependent and abusive relationships, *The Devil's Grip* takes us on a breathless journey with the shadow selves we can't escape.

This book is a compilation of high-yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramming for the boards). The authors are early-career pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic

criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. It is intended to serve as a 'peripheral brain' for pathology residents and also practicing pathologists, where frequently needed information is readily accessible and easy to navigate.
