The Philadelphia Guide: Inpatient Pediatrics brings you the latest guidelines, procedures, and treatment and management strategies for inpatient pediatric care. The field of pediatric hospital medicine is rapidly growing and this handbook focuses specifically on caring for pediatric patients in the hospital setting. The Philadelphia Guide: Inpatient Pediatrics addresses over 350 commonly encountered inpatient pediatric medical conditions. Unlike other handbooks, it goes beyond diagnostic strategies to include complete treatment and management guidelines. The focus on the treatment of so many inpatient pediatric medical conditions means that it can be used by everyone who cares for pediatric patients in the hospital—medical students, residents, and pediatric attendings. Additionally, the organization of the book makes it immensely accessible. The clinical sections are alphabetized and subheadings are consistent throughout the book to make finding information quick and easy. Readers will have rapid access to tables listing pediatric dosages for emergency, airway, and rapid sequence intubation medications, as well as defibrillation and cardioversion protocols. Classic and current evidence-based references are included. Invaluable appendices cover normal vital signs, neonatal codes, and PALS algorithms. A fresh, new approach to pediatric literature, this indispensable handbook offers concise, precise information for healthcare practitioners of all levels, from all disciplines, involved in the care of children in the inpatient setting.

#### **MCQs in Medicine** Springer

What does it take to match into the specialty of your choice? This question is hotly debated and surveys of applicants and program directors find sharp divisions on the topic. In a recent survey, the authors concluded that "there are significant differences between program directors' and medical students' perceptions of which factors are important in the residency selection process" (Brandenburg 2005). In advising students over the years, we have come to realize that misperceptions abound, with applicants frequently overestimating or underestimating certain residency selection criteria. These misperceptions may result in a failure to match. From our own experiences as students, and in the process of counseling applicants, we know how difficult, anxiety-provoking, and mysterious the residency selection process is. In this book, we answer the question of what it takes to match successfully. We provide specific evidence-based advice to maximize your chances of a successful match. Who actually chooses the residents? We review the data on the decision makers. What do these decision makers care about? We review the data on the criteria that matter to them. How can you convince them that you would be the right resident for their program? We provide concrete, practical recommendations based on this data. At every step of the process, our recommendations are meant to maximize the impact of your application. Utilizing a unique combination of evidence-based advice and an insiders' perspective, this book will help you achieve your ultimate goal: The Successful Match.

Academic geriatricians are always looking for an improved objective, quantifiable measure of biological ageing in humans to replace that unphysiological and arbitrary scale 'years survived'. The MCQ may be the nearest we have come yet to achieving this Holy Grail. An individual's facility with the setting and answering of MCQs separates the medical generations more surely than years. I am only grateful I was educated in a less rigorous but perhaps more 'gentlemanly' era. If one appeared before an examiner neatly dressed with clean finger nails and the examination scripts were literate essays written in fountain pen then you were in - or so it seemed. For the past 20 years we have been evolving towards much more objective and rigorous assessment of knowledge and understanding of medicine of both undergraduate and postgraduate students. This process has been exemplified by the evolution of what is now the seemingly ubiquitous MCQ. When initially presented as objective and quantifiable measures of clinical knowledge MCQs were the subject of scorn - how could they assess the art of medicine - the grey areas of clinical decision making? However they very rapidly overcame this antediluvian scepticism and I believe they have had an effect well beyond the limited area of competence measurement. They have induced or at the very least contributed to a shift towards a more rigorous, dare one say more scientific, approach to clinical medicine.

This book offers mental health guidelines for all medical professionals facing the emerging challenges presented by an aging population worldwide. The text acknowledges that as the geriatric demographic grows, limited resources and infrastructures demand quality protocols to deliver inpatient geriatric psychiatric care, and that many physicians may not be trained to address these specific needs. This text fills this gap with guidelines assessing, diagnosing, and treating aging patients as they present in the emergency room and other settings. Unlike any other text, this book focuses on how to optimize the use of the inpatient setting by recommending evaluations and treatments, and offering flow-charts and figures of key points, to guide both general workup and continued evaluation and treatment. This approach aims to minimize instances of premature release or readmissions and to improve outcomes. Chapters cover the various issues that clinicians face when working with an older patient, including legal topics, limitations to treatment, prescription-related complications, patients struggling with substance abuse, and various behavioral concerns. Written by experts in the field, the text takes a multidisciplinary approach to deliver high-quality care as needs of the aging population evolve. Inpatient Geriatric Psychiatry is a vital resource for all clinicians working with an aging population, including geriatricians, psychiatrists, neurologists, primary care providers, hospitalists, psychologists, neuropsychologists, emergency room and geriatric nurses, social workers, and trainees.
