Singularities in Algebraic and Analytic Geometry Harppress
Publishing

Unlike some other reproductions of classic texts (1) We have not
used OCR(Optical Character Recognition), as this leads to bad

quality books with introduced typos. (2) In books where there are
images such as portraits, maps, sketches etc We have
endeavoured to keep the quality of these images, so they
represent accurately the original artefact. Although occasionally
there may be certain imperfections with these old texts, we feel
they deserve to be made available for future generations to
enjoy.

Solid analytic Geometry Holt McDougal

This volume contains the proceedings of an AMS special session

held at the 1999 Joint Mathematics Meetings in San Antonio. The participants were an international group of researchers studying singularities from algebraic and analytic viewpoints. The contributed papers contain original results as well as some expository and historical material. This volume is dedicated to Oscar Zariski, on the one hundredth anniversary of his birth. Topics include the role of valuation theory in algebraic geometry with recent applications to the structure of morphisms; algorithmic approaches to resolution of equisingular surface singularities and locally toric varieties; weak subintegral closures of ideals and Rees valuations; constructions of universal weakly subintegral extensions of rings; direct-sum decompositions of finitely generated modules; construction and examples of resolution graphs of surface singularities; Jacobians of meromorphic curves; investigation of spectral numbers of curve singularities using Puiseux pairs; Gröbner basis calculations of Hochschild homology for hypersurfaces with isolated singularities; and the theory of characteristic classes of singular spaces - a brief history with conjectures and open problems.
