The objective of this Master's Thesis was to review and evaluate the different strategic options for breakbulk liner shipping companies in terms of their potential to increase a company's ability to compete in the highly competitive market for containerizable breakbulk cargos. The identification of such a strategy required for a detailed assessment of the prevailing market forces and an analysis of the internal strength and weaknesses of such companies from a resource-based and market-based-view. The evaluation of the different strategic options has been based on the Chinese-Polish Joint Stock Shipping Company as a primary example of a breakbulk liner shipping company. A cost/price leadership strategy has been identified as economically most promising strategy. In an exemplary case study it has been tested if measures of digitalization can be applied to support such a strategy and help breakbulk liners to improve their competitiveness. The case study has illustrated that particularly the digitalization of transactions offers significant potential for savings in terms of working time and costs not only for breakbulk liners but also their customers. This Master's Thesis is addressed to any reader with particular interest in strategic management in the breakbulk liner shipping industry and to readers who are interested in the application of concepts for digitalization in the transport industry.

A companion Workbook to the text *Micro Markets Understanding how microeconomics affects the marketplace* is essential for any investment professional, however most books simply address microeconomics in its pure theory-based form. *Micro Markets* helped bridge the gap between theory and practice by defining microeconomics in terms of real-world, market applications. Now, the *Micro Markets Workbook* offers you a chance to review the information found in the actual book and solidify your understanding of this discipline. In this study guide, microeconomic concepts are fully reviewed, along with how all of its relevant theory is applicable to today's markets. Helps you learn to perform dynamic microeconomic analysis in practice Tests your knowledge of the information addressed in *Micro Markets*, before you put it to work in real world situations Provides solutions to each chapter of the main book's practice problems If you want to gain a firm understanding of the information outlined in *Micro Markets*, the lessons within this Workbook can help you achieve this goal.

John Sutton sets out a unified theory that encompasses two major approaches to studying market, while generating a series of novel predictions as to how markets evolve. Traditionally, the field of industrial organization has relied on two unrelated theories—the cross-section theory and the growth-of-firms theory—to explain cross-industry differences in concentration and within-industry skewness. The two approaches are based on very different mathematical structures and few researchers have attempted to relate them to each other. In this book, John Sutton unifies the two approaches through a theory that rests on three simple principles. The first two, a "survivor principle" that says that firms will not pursue loss-making strategies, and an "arbitrage principle" that says that if a profitable opportunity is available, some firm will take it, suffice to define a set of possible outcomes. The third, the "symmetry principle," says that the strategy used by a new entrant into any submarket depends neither on the entrants identity nor on its history in other submarkets. This allows researchers to bring together the roles of strategic interactions and of independence effects. The result is that the considerations motivating the cross-section tradition and those motivating the growth-of-firms tradition both drop out within a single game-theoretic model. This book follows Sutton's Sunk Costs and Market Structure, published by MIT Press in 1991.

In light of on-going global financial crises, the institutional structure of financial regulation is currently a subject of significant academic and practical interest. The financial crisis has called into question the adequacy of financial regulation at the national and supranational levels, and has instigated financial regulatory reforms in major markets overseas. This has included the enactment of the Dodd-Frank Act in the US, and the programme to split the Financial Services Authority in the UK. This book examines the institutional structure reform of financial regulation from a comparative perspective, exploring both fundamental theories and international experiences. The book explores the three main institutional structures of financial regulation in the world; the sectors-based model, adopted in the US, Mainland China and Hong Kong; the twin-peaks model with Australia and the Netherlands as its pioneers; and the single-regulator model as represented by the former Financial Services Authority in the UK and the Financial Services Agency in Japan. The book contains contributions from renowned experts in the field of financial regulation including Douglas Arner, Jeffrey Carmichael, Robin Hui Huang, Dirk Schoenmaker, and Michael Taylor, and will be of interest to students and researchers of banking and finance law, and comparative economics.

A major objective of this book is to identify the key determinants of successful inter-firm collaborations in the telecommunications industry in Australia and China, utilizing both qualitative and quantitative research methods as complementary methodologies. The findings will provide essential information and suggestions for businesses, researchers and policy makers and shed light on how to concretely improve the performance of business collaborations. Inter-firm collaboration has become increasingly important in the global economy, as firms now rely on collaborations to access new resources, new technologies, skills, the latest market information, new markets and knowledge, to accelerate innovation, to reduce costs, and to overcome government policy barriers.
