Kate Winter teaches dog owners how to train their canine companions. During her spare time, accompanied by her Lab, Dakota, she explores the woods and beaches on foot or horseback. She's worried that something's happening in her relationship, but she can't get her girlfriend Trish to talk to her about it. Faith

Hutchins recently lost her sight after a terrible outdoor accident. She's dealt with her anger, depression, and blindness primarily on her own. A seeing-eye dog would help alleviate her reliance on anyone else, but the guide dog school has been unsuccessful in providing her with one. On a mission to find someone who will train a dog specifically for her, she ultimately zeroes in on Kate. They say lightning never strikes the same place twice. But positive lightning is notoriously unpredictable and can ignite a fire when and where least expected . . . no matter

who's in its path."

Charts and graphs summarize key points and help readers see how concepts are related. Incorporates Contemporary Cases and Issues - Relevant cases are discussed throughout and are used to illustrate how key principles are applied in real-life scenarios. Chapter 20 solely focuses on how the Internet has affected publishing and the law. Provides Case Citations - For those who wish to explore the case law for each topic in full, a Table of Citations is provided Text + MySearchLab ValuePack: ValuePack ISBN-10: 0133803333 ValuePack ISBN-13: 9780133803334 *Google Sketchup for Game Design* White Pine Press (NY)

The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge

information. The book provides insights for advance research work in the area of image processing and biometrics.

The author of this concise guide to unarmed combat and self-defence is a legend. W. E. Fairbairn (1885-1960) spent over thirty years in the tough environment of the Riot Squads of China's Shanghai Municipal Police. In order to lower levels of Police mortality at the hands of Chinese Tong, he studied ancient Chinese and Japanese martial arts, including Ju-jitsu, and was the first foreigner to be awarded

a black belt in the discipline. He developed his own system which he called 'Defendu'. At the outbreak of the Second World War, he was recruited by Britain's Special Operations Executive as an Instructor in unarmed combat and expounded the deadly mysteries of attack and defence to scores of trainee agents about to be dropped into occupied Europe. His methods were approved and officially adopted throughout the British army. Fairbairn also developed weapons and defence aids such as bullet proof vests. He is best known as the co-inventor of the famous Sykes-Fairbairn knife. In this book he expounds his distilled experience of unarmed combat. Fully illustrated, it shows how to deliver deadly blows with hand, fist, knee and boot; wrist, bear- and strangle holds (and how to break them); how to throw an enemy, and how to break their backs; how to disarm a pistol-wielding attacker; and securing a prisoner. The book also contains a chapter on the use of the rifle in close combat by Captain P. N. Walbridge.

Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world--complete with its own jargon and status system--in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In *Gifted Tongues*, Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost

academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.

From the authors of the bestselling *E-Mail Virus Protection Handbook!* The Linux operating system continues to gain market

The fact that Linux source code is readily available to every hacker means that system administrators must continually learn security and anti-hacker techniques. *Hack Proofing Linux* will provide system administrators with all of the techniques necessary to properly configure and maintain Linux systems and counter malicious attacks. Linux operating systems and Open Source security tools are incredibly powerful, complex, and notoriously under-documented - this book addresses a real need Uses forensics-based analysis to give the reader an insight to the mind of a hacker

Gifted Tongues Routledge

"American Vitruvius: an Architects' Handbook of Civic Art. At the end of the second decade of this [the twentieth] century, Werner Hegemann, a German-born urban planning theorist and

practitioner, and Elbert Peets, a young American recently graduated from Harvard University's School of Landscape Architecture, joined together in Wisconsin in a professional partnership. The association of these two students of American urbanism culminated in 1922 with *The American Vitruvius: an Architects' Handbook of Civic Art*, a critical text that played an essential role in the definition and promotion of modern American city planning. *American Vitruvius* offers the reader an atlas of design solutions and advocates a humanistic, as well as rational, development of the urban environment. Princeton Architectural Press has reprinted the entire original text including the book's 1203 plates. These illustrations consist of plans, elevations, and perspective views of both European and American cities, spanning in date from the Renaissance to the twentieth century. The republication of this volume suggests the relevance of Hegemann and Peets' approach for contemporary city planning. Today, in the midst of an era responding to the de-humanization of the city, *American Vitruvius* offers a reconciliation of artistic aspects of civic art with scientific

theory of city planning -- the authors insist upon a city that allows its residents both pleasure and freedom of expression"-- Front flap.
