This book shows how the systems approach is employed by scientists in various countries to solve specific problems concerning railway transport. In particular, the book describes the experiences of scientists from Romania, Germany, the Czech Republic, the UK, Russia, Ukraine, Lithuania and Poland. For many of these countries there is a problem with the historical differences between the railways. In particular, there are railways with different rail gauges, with different signaling and communication systems, with different energy supplies and, finally, with different political systems, which are reflected in the different approaches to the management of railway economies. The book's content is divided into two main parts, the first

of which provides a systematic analysis of individual means of providing and maintaining rail transport. In turn, the second part addresses infrastructure and management development, with particular attention to security issues. Though primarily written for professionals involved in various problems concerning railway transport, the book will also benefit manufacturers, railway technical staff, managers, and students with transport specialties, as well as a wide range of readers interested in learning more about the current state of transport in different countries.

For more than a century, the U.S. Navy's battleships, cruisers, destroyers, submarines and amphibious warfare vessels have depended on a small group of specialized auxiliary ships to provide fuel, food, ammunition, parts and other material support and services. Without these workhorse vessels, the U.S. Fleet could not have won in World War II and it could not today deploy and remain on station in the far distant waters of the world. This book provides the rosters, histories, specifications and illustrations of 130 different auxiliary ship types in the last 100 years, including the little-known ones, the latest expeditionary fast transports and future towing, salvage and rescue ships.

A comprehensive, fully illustrated encyclopedia of river gunboats from the early 19th century to the present day. The first recorded engagement by a steam-powered warship took place on a river, when in 1824 the Honorable East India Company's gunboat Diana went into action on the Irrawaddy in Burma. In the 150 years that followed, river gunboats played a significant part in over forty campaigns and individual actions around the world. This comprehensive reference book covers the development of riverboat warfare from the early 19th century to current riverine combat vessels in service today. River gunboats proved to be the decisive factor in a wide range of conflicts across the world—from the New Zealand Wars to the American Civil War, and from both World Wars to the conflicts in Indochina and Vietnam. This lavishly illustrated encyclopedia describes the river gunboats that saw action, plus those converted river steamers which took part in combat. This volume also includes maps of the river systems where they operated, together with narratives of the principal actions involving river gunboats.
