### *Clinical Ophthalmic Pathology* BMJ Books

Ophthalmic Nursing provides an overview for those just setting out in a role within ophthalmic nursing. It includes basic and comprehensible anatomy and physiology – the foundations for understanding how the eye functions and why and how problems occur – and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure guidelines and the inclusion of reflective activities in most chapters allows readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly and included new colour images and diagrams. References, further reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the 'go-to' source for those caring for the ophthalmic patient.

### *Clinical Optics* Wiley-Blackwell

Essentials of Ophthalmology: For Medical School and Beyond is a concise reference text for the medical undergraduates and residents, but the contents will also benefit family physicians who really are the first line of eye-care givers in the community. Highly illustrated with 200 colour clinical pictures and illustrations, the book is written by the multi-disciplinary faculty of the Department of Ophthalmology, National University Health System, Singapore. The authors constantly asked themselves 'how much is too much' and deliberately attempted to weed out any 'excess' for the benefit of the target readers. The content is written in a point format with lucid language. Emphasis has been focused on information that constitutes essential ophthalmic 'core conditions and problems' of the current medical undergraduate curriculum. Every section in the book has 'learning objectives' and a 'take home message' to facilitate quick learning. The book embraces a practical guide to the study of ocular diseases, basic methods of investigations and treatment where applicable.

### **MCQs for FRCOphth part 2** Amer Academy of Pediatrics

In our world of information overload, there is an increasing struggle to keep the main thing the main thing. Fundamental OSCE Guide in Ophthalmology is a concise study guide presented in a direct, exam style question and answer format, illustrated with high quality clinically relevant photographs tailored to medical students, nurses, optometrists and residents in their early ophthalmology training. This book provides invaluable guidance to readers in presenting their answers in a logical, succinct and elegant manner. The style and format have been intentionally designed to simulate examination conditions and to provide readers with ample practice in preparation for the

examinations. Ophthalmology is a very specialized field with many textbooks providing a wealth of information. Exposure to ophthalmology is limited in most undergraduate interactions to a few weeks at best. With a shortage of time, gaining a good understanding of what is important is overwhelming. This book helps to streamline and focus knowledge of readers in understanding the essential conditions in ophthalmology. Various other texts on ophthalmology are often in prose and covers a wide range of topics, including the esoteric conditions. To the untrained eye, it is difficult to discern what should be focused on. Students are often times excited about knowing rare conditions and spend precious time and effort remembering details of these conditions without a strong foundation of the more common conditions seen day to day. This books not only highlights the important conditions, it is structured to simulate examination conditions and can be used as a self-testing tool.

### **Sure Success for FRCS A/1, FCPS I, MS-I, MCPS-I** World Scientific

This book provides a core revision resource for candidates sitting part 2 of the FRCOphth and other UK and international qualifying exams such as the FRCS, MRCS, FAMS and FRANZCO. Clear, didactic chapters logically outline the requirements for Structured Vivas and Objective Structured Clinical Examination with 'Do's and Don'ts' for each section. Viva and OSCE Exams in Ophthalmology: A Revision Study Guide fills the need for a study companion that contains all the required resources in a single usable guide for candidates sitting fellowship exams to become a registered ophthalmologist or surgeon. Ophthalmic specialist trainees, specialty doctors, staff grades, and associate specialists who wish to become a fellow will find this book to be an essential guide to revising for oral and clinical based exams in ophthalmology.

### *A Text for Allied and Associated Ophthalmic Personnel* Butterworth-Heinemann Medical

Kanski's Clinical Ophthalmology: A Systematic Approach is the classic specialty text providing the perfect ophthalmology foundation for trainees through to experienced practitioners. The famous visually dynamic and succinct format enables easy comprehension and focused guidance in the diagnosis and management of ophthalmic disorders. Build the ultimate foundation in ophthalmology with this market-leading resource. Benefit from guidance on examination, imaging, and the recognition of systemic conditions associated with ocular disease. Completely revised by award-winning ophthalmic educator Brad Bowling, the eighth edition reflects the latest advances, making this an indispensable resource to enhance learning, aid exam preparation and guide clinical practice. Designed for rapid reference and efficient recall, the concise but comprehensive chapters use crisp targeted text, bulleted lists, tables, and visual aids to highlight salient points across all ophthalmology subspecialties. Features detailed updates on key evolving topics such as the spectrum of macular disease, with many new disorders added to this edition across a range of subspecialties. Increased emphasis on practical investigation and management. Includes 2,600 illustrations, images and artworks, with over 900 brand new for this edition, including ultra wide-field imaging, fundus autofluorescence, and high-resolution OCT. Consult this title on your favourite e-

reader.

*Second Edition* World Scientific

An indispensable and fully comprehensive textbook, this covers the basic sciences in ophthalmology and is the only book you need to pass the FRCOphth Part 1 exam.

Basic Ophthalmology Exam Review OUP Oxford

"Challenging Cases in Pediatric Ophthalmology" is an information-rich new resource with 88 real-life case studies spanning all the ocular issues likely to be encountered in everyday practice. Developed by a distinguished editorial team with contributions from more than 80 top pediatric ophthalmologists help you sharpen your eye-care skills from initial evaluation to final outcome.

Clear, easy-reading case reports guide you step-by-step through: - Patient presentation - Diagnosis - Differential diagnosis - When to refer - Treatment - Detailed discussion including management recommendations With its case-based problem/solution format - plus more than 250 images - this is both a valuable clinical tool and a superb learning and training aid. Accessible to symptom or by condition, cases are arranged under 12 main headings for quick look-up and review: - Red Eye - Teary Eye - Eyelid and Orbit - Abnormal Red Reflex - Abnormalities of the Anterior Segment - Abnormalities of the Retina and Optic Nerve - Trauma - Abnormal Eye Movements/Position - Decreased Vision - Systemic Disease - Problems in School/Reading - Incidental Findings

Glaucoma Slack Incorporated

Clear, concise, and clinical, this unique reference offers a comprehensive overview of the basic techniques needed for ocular examination and diagnosis. Abundantly illustrated, it presents the principles of each technique, provides guidance on choosing the appropriate approach, explains how to perform them, offers examples of when each technique should be used, and lists their common indications and potential pitfalls. Offers a full chapter covering new imaging techniques for the retina and optic nerve. Features abundantly illustrated guidance in a clear format for a quick visual reference. Explores standard assessment procedures as well as microbiological examination and investigation, ultrasound and radiological evaluation, clinical visual electrophysiology, and fluorescein angiography.

*FRCOphth Part 1: 400 SBAs and CRQs* Springer Nature

FRCOphth Part 1: 400 SBAs and CRQs offers a wealth of practice questions for candidates preparing to sit the FRCOphth Part 1 exam. With so few revision resources available, this book will be an invaluable tool for candidates requiring comprehensive practice material for successful exam preparation. Organised into 3 complete exam papers, all the questions feature corresponding answers that reinforce key concepts and enable candidates to gain a thorough understanding of the subject. Topics in exam papers 1 and 2 are arranged in line with the FRCOphth syllabus, while exam paper 3 is presented as an unstructured mock exam to replicate the experience of sitting the exam. Covering the full breadth of the syllabus, FRCOphth Part 1 400 SBAs and CRQs provides the definitive revision guide to maximise chances of exam success. 360 SBAs and 40 CRQs (Constructed Response Questions) arranged as three exam papers, providing a large number of questions for exam revision Chapters 1 and 2 are exam papers, structured according to the FRCOphth syllabus to allow organised, progressive revision Chapter 3 is structured as a standard mock exam allowing candidates to practice under exam conditions Answers feature detailed explanations to consolidate

knowledge

**Revision in Optics and Refraction** Churchill Livingstone

With high quality color images combined with up-to-date treatment guidelines and a proven template, the third edition of *The Massachusetts Eye and Ear Infirmary Illustrated Manual of Ophthalmology* is a vital companion for every ophthalmic trainee, primary care practitioner and emergency trauma unit. The bonus PDA software allows you to access the entire contents of the manual on the go. Provides thorough, easily accessible and up-to-date information for all common eye disorders, creating an all-in-one resource for quick diagnosis and treatment. Uses highlighted emergency management boxes for a clear presentation of the crucial treatment of critical situations. Follows a templated format with key boxes highlighting important information. Presents full-color photographs throughout so you can compare real case presentations for more accurate diagnosis. Orders chapters anatomically (not by ophthalmic subspecialty) making it easier to locate the desired information by looking at the effected area. Provides a complete and thorough update with expanded sections, including age related macular degeneration, diabetic retinopathy, uveitis, glaucoma, dry eye, and refractive surgeries. Incorporates over 100 new high quality clinical color photos plus spectral domain OCT, CT scan, fluorescein angiogram, visual field, and corneal topography images. Adds brand new appendices outlining basic eye care and differential diagnosis information to help minimize wasted time in the clinic. Offers immediate and convenient access to the whole manual when on the go with bonus PDA software.

Ophthalmology Fact Fixer Elsevier Health Sciences

Preceded by *The eye* / John V. Forrester ... [et al.]. 3rd ed. 2008.

*A Comprehensive Guide for Career and Life* World Scientific

This is a self assessment test which covers all aspects of the basic sciences related to ophthalmology. Each chapter comprises a series of MCQs and their explanatory text constitutes an up to date summary of that topic. The book is illustrated with 150 diagrams which compliment the text. It may be used as a revision aid for those about to sit the final FRCO or it may be read as a text book for those wishing to update their knowledge of the basic sciences.

The Massachusetts Eye and Ear Infirmary Review Manual for Ophthalmology Oxford University Press

Recent dramatic advances in diagnosis, as well as medical and surgical treatment, mean that you can offer your glaucoma patients more timely and effective interventions. This brand-new clinical reference delivers the comprehensive, expert guidance you need to make optimal use of these new approaches. online, in print, and on video on DVD! Get in-depth guidance on all aspects of adult and pediatric glaucoma with one volume devoted to diagnosis and medical treatment, and another that focuses on surgical techniques. Presents world-class expertise through advice from leading specialists across six continents. Captures key diagnostic findings and operative procedures with 1,200 high-quality images and photographs-1,000 in full color-that highlight nuances of glaucoma presentation and treatment. Covers all aspects of adult and pediatric glaucoma in Volume One, and the latest diagnostic imaging techniques including ultrasound biomicroscopy and optical coherence tomography. Guides you through the newest surgical techniques-such as trabeculectomy, goniosurgery, combined surgeries, and implant procedures-in Volume Two. Features an entire section devoted to new horizons, including the latest in stem cell research, gene transfer, and implants.

Allows quick reference thanks to a well-organized, user-friendly full-color layout. Provides access to the contents of the book online with downloadable images, Gold Standard drug information, and more. Includes a DVD that features 25 diagnostic and surgical techniques being performed in real time on video. Your purchase entitles you to access the web site until the next edition is published, or until the current edition is no longer offered for sale by Elsevier, whichever occurs first. If the next edition is published less than one year after your purchase, you will be entitled to online access for one year from your date of purchase. Elsevier reserves the right to offer a suitable replacement product (such as a downloadable or CD-ROM-based electronic version) should online access to the web site be discontinued.

*Basic Sciences in Ophthalmology* John Wiley & Sons

Freeman, is your go-to resource for practical, up-to-date guidance on ocular diseases, surgical procedures, medications, and equipment, as well as paramedical procedures and office management in the ophthalmology, optometry, opticianry or eye care settings. Thoroughly updated content and more than 1,000 full-color illustrations cover all the knowledge and skills you need for your day-to-day duties as well as success on certification and recertification exams. This comprehensive text provides essential learning and practical guidance for ophthalmic assistants, technicians, medical technologists, physician assistants, and all others involved in ocular care, helping each become a valuable asset to the eye care team. Full-color visual guidance for identification of ophthalmic disorders, explanations of difficult concepts, and depictions of the newest equipment used in ophthalmology and optometry. Quick-reference appendices provide hospital/practice forms for more efficient patient record keeping, conversion tables, and numerous language translations, plus information on ocular emergencies, pharmaceuticals, and more. Updated throughout with the latest information on basic science, new testing procedures, new equipment, the role of the assistant in the practice, and an expanded chapter on OCT imaging. A new bonus color image atlas tests your clinical recognition of disease and disorders of the eye. Four brand-new chapters cover the latest industry advances regarding dry eye, vision function and impairment, uveitis, and surgical correction of presbyopia.

The Eye Elsevier Health Sciences

The book provides high yield information in basic ophthalmology including anatomy, physiology, pathology, pharmacology, microbiology, and embryology that are required for preparation of ophthalmology exams. The book focusses on all parts of the eye, with special focus on basic science including appropriate amount of information on clinical science for students and trainees. It is written in a lucid manner with textual notes and illustrations for quick learning and better understanding. Each section contains high yield information in separate points, with commonly asked information in Eye Yield Note boxes. It also includes estimated study time for each section to better plan the study. It also includes a pre-exam night study section at the end of the book that provides the information to be reviewed just before the exam. The book will be very helpful in passing almost all basic ophthalmology exams in a relatively short study time, by skipping the filling text available in most of the textbooks. It will be an excellent read for post graduate students looking for concise revision material. It will be relevant for medical students, ophthalmology residents, and medical doctors applying for ophthalmology residency and also for FRCS Part 1 exam.

Examination Techniques, Questions, and Answers Elsevier Health Sciences

This is a new edition of an innovative and popular introduction to ophthalmology, which in its first edition was awarded the Asher Prize in the Royal Society of Medicine Book Awards. After an introduction to the anatomy of the eye and its examination, the major diseases of the eye and their management are described, followed by a problem-based introduction to clinical decision making. For this third edition, the book has been revised to take account of the many advances in this specialty including the use of monoclonal antibodies in the treatment of 'wet' age-related macular degeneration and new surgical techniques for corneal transplants. Presents the core knowledge of ophthalmology and disorders of the eye, with a wealth of friendly features and superb illustrations. Relates structure to function in accordance with the approach that most of today's courses take. Tackles the common difficulties of diagnosis and management, such as acute red eye, sudden vision loss, and spots before the eyes, in the clinical decision-making section. Thoroughly updated to reflect current clinical practice. Additional material on macular degeneration. New and replacement images to reflect use of new imaging modalities.

*Anatomy ;Ocular physiology ;Biochemistry and genetics ;Pathology ;Microbiology ;Immunology ;Growth and senescence ;Optics ;Therapeutics ;Lasers and instrument technology ;Basic biostatistical and epidemiological terms* Lippincott Williams & Wilkins

Lecture Notes in Ophthalmology is a core text designed to meet the needs of medical students, junior doctors, optometrists and opticians who need a concise overview of this important subject. Lecture Notes on Ophthalmology begins with a brief introduction to the structure and function of the eye, which is integrated with the clinical science. With 17 chapters and now heavily illustrated with 50 full-colour line diagrams and more than 100 clinical photographs, this book concentrates on the most common eye problems that students and doctors can expect to diagnose and manage. Because the authors give each condition a highly structured description to facilitate easy access to information, they ensure, therefore, that the book is ideal for revision.

**Expert Consult Premium Edition - Enhanced Online Features, Print, and DVD, 2-Volume Set** Wiley-Blackwell

With Contributions From Chelvin Sng (National University Health System, Singapore) & Laurence Lim (Singapore National Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesized in this book. While not meant to replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a "model opening statement," followed first by a classification system to aid organization of facts, and

then the core explanation in concise short notes. “Exam Tips” are inserted to provide an insight into techniques of answering different types of questions and when appropriate, a “Clinical Approach” section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.

Ophthalmology: Clinical and Surgical Principles CRC Press

MCQs for FRCOphth Part 2 is a key resource for candidates preparing to sit the Royal College of Ophthalmologists examination. Written by experts in the field, it is carefully mapped to the RCOphth curriculum, providing comprehensive preparation for all aspects of this challenging exam. Written

for the new FRCOphth format, it contains 360 questions organised into five sections to reflect the subdivisions of the exam. A mock examination of 90 questions enables trainees to assess their level of knowledge, and practise the technique and approach needed for the examination. In addition to a small ratio of illustration based questions to reflect the real FRCOphth exam it also places an emphasis on areas that are not well covered in other materials, such as GMC and RCOphth guidelines. All answers are accompanied by detailed explanations and relevant further reading sources, providing candidates with high-quality self-assessment. Offering a true test of the reader's ophthalmology knowledge, this is a must-buy for anyone preparing for the FRCOphth part 2 written exam.

**ABC of Eyes** Elsevier Health Sciences

Packed with 65 sample cases covering all core topics, Ophthalmology Oral Board Review is an image-based case review designed to help you prepare—and succeed—on the American Board of Ophthalmology oral board certification exam. Regardless of your level of experience, the book features simple tools, advice, and tactics to become more organized, assertive, and confident in delivering case presentations.
