'Galileo's Idol' is a historical case-study of the use of information in the making of early modern scientific knowledge. It studies the relationship between natural philosophical and political practices in the Venetian Mediterranean at the start of the seventeenth century. Using the figure of Galileo's closest friend and confidant, Gianfrancesco Sagredo (1571-1620), it shows how techniques of political information exchange were appropriated by early practitioners of the

new science.

The first collection and translation into English

of the earliest biographical accounts of Galileo's life This unique critical edition presents key early biographical accounts of the life and work of Galileo Galilei (1564–1642), written by his close contemporaries.

Collected and translated into English for the first time and supplemented by an introduction and incisive annotations by Stefano Gattei, these documents paint an incomparable firsthand picture of Galileo and offer rare insights into the construction of his public image and the complex intertwining of science, religion, and politics in seventeenth-century Italy. Here in its entirety is Vincenzo Viviani's Historical Account, an extensive and influential

biography of Galileo written in 1654 by his last and most devoted pupil. Viviani's text is accompanied by his "Letter to Prince Leopoldo de' Medici on the Application of Pendulum to Clocks" (1659), his 1674 description of Galileo's later works, and the long inscriptions on the façade of Viviani's Florentine palace (1702). The collection also includes the "Adulatio perniciosa," a Latin poem written in 1620 by Cardinal Maffeo Barberini—who, as Pope Urban VIII, would become Galileo's prosecutor—as well as descriptive accounts that emerged from the Roman court and contemporary European biographers. Featuring the original texts in Italian, Latin,

and French with their English translations on facing pages, this invaluable book shows how Galileo's pupils, friends, and critics shaped the Galileo myth for centuries to come, and brings together in one volume the primary sources needed to understand the legendary scientist in his time.

### **Galileo's Reading**

Galileo e la prima guerra stellare Galileo Galilei (1564–1642), his life and his work have been and continue to be the subject of an enormous number of scholarly works. One of the consequences of this is the proliferation of identities bestowed on this figure of the Italian Renaissance: Galileo the great theoretician, Galileo

the keen astronomer, Galileo the genius, Galileo the physicist, Galileo the mathematician, Galileo the solitary thinker, Galileo the founder of modern science, Galileo the heretic, Galileo the courtier, Galileo the early modern Archimedes, Galileo the Aristotelian, Galileo the founder of the Italian scientific language, Galileo the cosmologist, Galileo the Platonist, Galileo the artist and Galileo the democratic scientist. These may be only a few of the identities that historians of science have associated with Galileo. And now: Galileo the engineer! That Galileo had so many faces, or even identities, seems hardly plausible. But by focusing on his

activities as an engineer, historians are able to reassemble Galileo in a single persona, at least as far as his scientific work is concerned. The impression that Galileo was an ingenious and isolated theoretician derives from his scientific work being regarded outside the context in which it originated.  The Papacy in the Age of Totalitarianism, 1914-1958 examines the most momentous years in papal history. Popes Benedict XV (1914-1922), Pius XI (1922-1939), and Pius XII (1939-1958) faced the challenges of two world wars and the Cold War, and threats posed by totalitarian dictatorships like Italian Fascism, German National

Socialism, and Communism in Russia and China. The wars imposed enormous strains upon the unity of Catholics and the hostility of the totalitarian regimes to Catholicism lead to the Church facing persecution and martyrdom on a scale similar to that experienced under the Roman Empire and following the French Revolution. At the same time, these were years of growth, development, and success for the papacy. Benedict healed the wounds left by the 'modernist' witch hunt of his predecessor and re-established the papacy as an influence in international affairs through his peace diplomacy during the First World War. Pius XI resolved the 'Roman

Question' with Italy and put papal finances on a sounder footing. He also helped reconcile the Catholic Church and science by establishing the Pontifical Academy of Sciences and took the first steps to move the Church away from entrenched anti-Semitism. Pius XI continued his predecessor's policy of the 'indigenisation' of the missionary churches in preparation for de-colonisation. Pius XII fully embraced the media and other means of publicity, and with his infallible promulgation of the Assumption in 1950, he took papal absolutism and centralism to such heights that he has been called the 'last real pope'. Ironically, he also prepared the

way for the Second Vatican Council.

This 1989 book is a detailed study of the social origins of the fascist reaction in Tuscany, which played a key role in the rise of Italian fascism to power. Tuscan fascism was second to none in its violence, organisational strength, intransigence and missionary zeal. The central question is who supported fascism, and why. To what extent did Tuscany, a major agricultural region, conform to national patterns? What are the implications of the pattern of support for fascism in Tuscany for the wider

interpretation of the movement? Dr Snowden offers a thematic approach, discussing in turn agrarian fascism, industrial and urban activity, and relations between the black-shirts and state officials. Thus the significance of the fascist militancy of particular social groups and classes can be assessed for the period between the mass strikes in 1919 and the end of labour militancy marked by the beginning of the fascist dictatorship.

Interest in Italy's development is warranted by the size of the country, the level of income it has achieved and the lessons its particular story may contain. The relevant literature is extensive and includes studies by social historians as well as by economic historians and economists. Most of the literature available is in Italian, although the work in English is growing. This comprehensive

volume brings together in an easily accessible form the main articles, some of which are published here in English for the first time. The introduction aims to provide the non-Italian reader with a general overview of the discussion that forms the background to the essays collected. The volume contains chapters on the development process, agriculture, industrialization, technical progress, industrial policy, the macroeconomic framework and the issue of geographical and economic dualism. Questo libro è invito alla ricognizione teoricamente motivata e storicamente

documentata del significato dell'opera di Galileo Galilei e del suo essere stato in vita nella cultura scientifica e politica del primo Novecento europeo. Sono selezionate le notevoli esperienze di studio di Cassirer e Banfi, di Koyré e Geymonat non senza la felice intuizione di dedicare un capitolo alla drammaturgia di Brecht, che chiude idealmente questa ricerca propostasi come un cantiere di lavoro in progress. *Britannica Enciclopedia Moderna* Armando Editore

Eileen Reeves

examines a web of connections between journalism, optics, and astronomy in early modern Europe, devoting particular attention to the ways in which a long-standing association of reportage with covert

surveillance and astrological prediction was altered by the near simultaneous emergence of weekly newsheets, the invention of the Dutch telescope, and the appearance of Galileo Galilei's astronomical treatise, *The Starry Messenger*. Early modern news writers and consumers often understood journalistic texts in terms of recent developments in optics and astronomy, Reeves demonstrates, even as many of the first discussions of telescopic phenomena such as planetary satellites, lunar craters, sunspots, and comets were conditioned by accounts of current events. She charts how the deployment of particular technologies of vision—the telescope and the

camera obscura—were adapted to comply with evolving notions of objectivity, censorship, and civic awareness.

Detailing the differences between various types of printed and manuscript news and the importance of regional, national, and religious distinctions, *Evening News* emphasizes the ways in which information moved between high and low genres and across geographical and confessional boundaries in the first decades of the seventeenth century.

Il cristianesimo nel I secolo copre la storia formativa del cristianesimo dall'inizio del ministero di Gesù (circa 27-29 d.C.) fino alla morte dell'ultimo dei Dodici Apostoli (circa 100) ed è quindi anche conosciuto come l'Apostolico Età. Il cristianesimo primitivo si sviluppò dal ministero escatologico di Gesù. Dopo la morte di Gesù, i suoi primi seguaci formarono una setta ebraica messianica apocalittica durante il tardo periodo del Secondo Tempio del I secolo. Credendo inizialmente che la risurrezione di Gesù fosse l'inizio della fine dei tempi, le loro convinzioni cambiarono presto con l'attesa seconda venuta di Gesù e l'inizio del Regno di Dio in un

momento successivo.
