[Handbook of Research on Investigations in Artificial Life Research and Development](#) Walter de Gruyter GmbH & Co KG Here's a book that describes Web 2.0 tools in-depth, models Web 2.0

tools through classroom examples, explains how to get started with each tool, presents practical unit plans illustrating the use of Web 2.0 in the K-12 content-area curricula, and identifies and describes what tools are most useful to educators for networking, productivity and insight into the technologies. Part 1 of each chapter answers many questions you will have about Web 2.0 and social networking tools: What is the tool? Why use it with students? How are K-12 classrooms using the

tool? Can you provide me with specific examples for my science, history, or language arts curriculum? Part 2 describes specific tools and the steps to get started. Part 3 contains a detailed sample unit plan, teacher exercises and a summary following. Screen shots of websites are used to make the advice straightforward and easy to understand. You'll find an entire chapter on special instruction for ESL students with objectives, tools, and K-12 classroom examples. To help you

implement Web 2.0 tools beyond the curriculum, there's even a chapter devoted to technology tools specifically designed for teachers and librarians to use for personal productivity, communication, and collaboration. The conclusion offers ideas for integrating Web 2.0 in art, music, and health. This book examines sociolinguistic, educational and psycholinguistic factors that shape the path to sign bilingualism in deaf individuals and contributes to a better understanding of the specific characteristics of a type of bilingualism that is neither territorial nor commonly the result of parent-to-child transmission. The evolution of sign bilingualism at the individual level is discussed from a

developmental linguistics perspective on the basis of a longitudinal investigation of deaf learners' bilingual acquisition of German sign language (DGS) and German. The case studies included in this volume offer unique insights into bilingual deaf learners' sign language and written language productions, and the sophisticated nature of the bilingual competence they attain. Commonalities and differences between sign bilingual language development in deaf

learners and language development in other language acquisition scenarios are identified on the basis of a dynamic model of change in the evolution of (learner) language, with a focus on the role of language contact in the organisation of multilingual knowledge and the scope of inter- and intra-individual variation in learner grammars. In many respects, as becomes apparent throughout the chapters of this work, sign bilingualism represents

not only a challenge but also a resource. Given this cross-disciplinary perspective, the insights on bilingualism and deafness in this volume will be of interest to a wide range of researchers and professionals.
