Accounting Information Systems 1e covers the four roles for accountants with respect to information technology: 1. Users of technology and information systems, 2. Managers of users of technology, 3. Designers of information systems, and 4. Evaluators of information systems.

Accountants must understand the organisation and how organisational processes generate information important to management. Richardson's focus is on the accountant's role as business analyst in solving business problems by database modeling, database design, and business process modeling. Unlike other texts that provide a broad survey of AIS related topics, this text concentrates on developing practical, real-world business analysis skills.

An Amazon Best History Book of 2019 "A splendid and beautifully written illustration of the tremendous importance public policy has for the daily lives of ordinary people." —Ryan Cooper, Washington Monthly Over the last generation, the United States has undergone seismic changes. Stable institutions have given way to frictionless transactions, which are celebrated no matter what collateral damage they generate. The concentration of great

wealth has coincided with the fraying of social ties and the rise of inequality. How did all this come about? In *Transaction Man*, Nicholas Lemann explains the United States'—and the world's—great transformation by examining three remarkable individuals who epitomized and helped create their eras. Adolf Berle, Franklin Delano Roosevelt's chief theorist of the economy, imagined a society dominated by large corporations, which a newly powerful federal government had forced to become benign and stable institutions, contributing to the public good by offering stable employment and generous pensions. By the 1970s, the corporations' large stockholders grew restive under this regime, and their chief theoretician, Harvard Business School's Michael Jensen, insisted that firms should maximize shareholder value, whatever the consequences. Today, Silicon Valley titans such as the LinkedIn cofounder and venture capitalist Reid Hoffman hope "networks" can reknit our social fabric. Lemann interweaves these fresh

and vivid profiles with a history of the Morgan Stanley investment bank from the 1930s through the financial crisis of 2008, while also tracking the rise and fall of a working-class Chicago neighborhood and the family-run car dealerships at its heart. Incisive and sweeping, *Transaction Man* is the definitive account of the reengineering of America and the enormous impact it has had on us all.
