Friends are Wonderful is a parent's answer to the disturbing question from their child, 'How come my best friend does not want to play with me anymore?' This book weaves a story of friendship that even the youngest readers can understand. Friends and the challenges that come with long

term relationships are unmasked and made public. More importantly, Federico sheds an intuitive light on how children can resolve their own friendship issues. There is a friendship formula that Friends are Wonderful skillfully navigates children and parents through.

Until one day a science experiment goes haywire, and Howard creates a best friend for himself—Franklin—who also happens to be a monster. Creating Franklin was an accident, not like Howard

Only, these friends aren’t quite as friendly. Soon there’s a major mess and Howard has to sort it all out before the monsters destroy their human counterparts. But terminating the monsters proves harder than he imagined. They didn’t choose to be monsters; they can’t go against their innate nature. Howard finds himself facing consequences for playing God. Getting rid of the monsters means learning to tame his own inner beast, and Howard begins to understand the meaning of free will and true friendship

Death is a great and grand mystery, and the actual act of dying is the last physical act of our lives. We can do it well, like a graceful well-rehearsed piano solo—or we can do it like that first awkward dance with a middle-school crush. But if anything deserves our full attention, some preparation, or some renewed clarity, death might be it. In this light-hearted, irreverent exploration of the one thing that is certain in all lives, *Making Friends with Death* offers a look at all the uncertainty that precedes this final act. A compelling

mix of practical how-to advice and personal narrative, this book encapsulates our greatest quest—to make peace with death. Pritchett offers up wisdom she has gleaned from all sorts of places, including a decade of traditional research and a lifetime of other related, but less formal, pursuits (digging up a dead body, watching her dog be necropsied on the lawn, hosting Death Cafés, and confronting the grim reaper himself). *Making Friends with Death* broaches the sacred and the scary with warmth, research, and humor. Interspersed with a variety of workbook-like exercises, this book will prove to be the go-to companion for anyone who would rather be able to greet death as an old friend, rather than a spooky stranger.

braver, and that passing friendliness along is a good feeling, too. Before long, Sukie, Joe, Poppy, and Stan are all becoming friends! Young readers are invited to join them as they explore meeting new people, celebrating differences, being thoughtful, and standing up for one another.

Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social

isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice,

especially as the evidence base for effective interventions continues to flourish.
